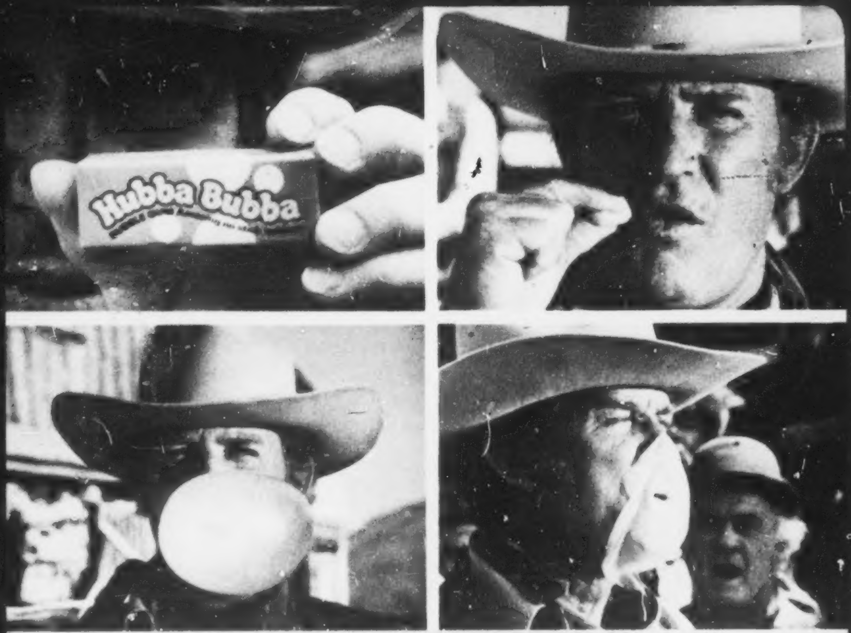
S&MM
SALES & MARKETING MANAGEMENT

OCTOBER 15, 1979
A BILL PUBLICATION
TWO DOLLARS



Stick with it, Wrigley

In a tense "gumfight," the hero of this TV commercial saves face by chewing Wrigley's Hubba Bubba with its "amazing no-stick bubbles." Once king of the chewing-gum market, Wrigley hopes that its newest product will help it repel the growing competition from American Chicle and Life Savers. The article begins on page 37.

Inside Out

Industrial marketing. To make sure it avoids another inventory problem, Pirelli Cable double-checks the size of its orders. Page 14.

S&MM Barometer. Instead of closing out the year with their usual business blitz, industrial marketers will have to fight for every sale. Page 15.

Commuter airlines spread their wings. These 258 small carriers are the hottest segment of the airline industry. Page 15.

The mystery at IBM. What's behind the computer giant's foray into videodiscs? See Page 17.

Marketing in the 1980s. A preview of S&MM's Dec. 10 Special Report describes the expected impact of technology. Page 59.

Sales Strategies. A new S&MM department by contributing editor Mack Hanan takes a look at how sales managers can best apply their products to the needs of key customers. Page 90.

AN S&MM
SPECIAL SECTION

Fleet cars
1980

The squeeze is on

With gas over $1 a gallon, it's everyone into the small cars. But try and find 'em.

Page 61.

AN EXCLUSIVE S&MM SURVEY

What top sales and marketing executives earn

S&MM
TABLE OF CONTENTS OCTOBER 15, 1979

What's coming up

Survey II. Media inflation, competition from the Olympics, and the 1980 presidential election will complicate the advertising picture next year. To help marketers plan their budgets, the *Survey of Buying Power—Part II* offers an update on the demographic and economic characteristics of newspaper and TV markets. Other highlights: Five-year projections of U.S. and Canadian metro markets and a review of merchandise line sales. Oct. 29.

American Biltrite is cutting its low-margin lines, reorganizing its sales and marketing team, and tightening controls wherever possible. The goal is simple: to make its industrial and consumer rubber and plastic products more profitable at last. Nov. 12.

Sales compensation. A survey of S&MM readers by Porter Henry and John Barry shows the types of plans most in use today—and the kind most disliked (even by those using them). Nov. 12.

Sales meetings. An S&MM Special Section reports on new techniques for picking sites and ensuring trouble-free sessions, with emphasis on planning. Nov. 12.

Address all manuscripts and correspondence relating to editorial matters to The Editor, Sales & Marketing Management, 633 Third Ave., New York, N.Y. 10017.

Because S&MM is almost totally staff written, only a very small number of contributed articles can be accepted for publication. For that reason, contributors are urged to submit an initial query along with an outline.

All unsolicited manuscripts must be accompanied by a return envelope with sufficient first-class postage. We regret that those arriving without such postage cannot be returned.

FEATURES

37 Stick with it, Wrigley
Once undisputed king of chewing gum, Wrigley plays catch-up as competitors chew into its market with new products.

AN EXCLUSIVE S&MM SURVEY

44 What top sales and marketing executives earn
A new rule forcing companies to be more candid about how much they pay makes this year's survey greener than ever.

57 Special Report Preview: **Marketing in the 1980s**
The role of the sales and marketing executive will be transformed by advances in communications technology.

AN S&MM SPECIAL SECTION

61 Fleet cars 1980: The squeeze is on
The fleet-footed race to small cars makes the law of supply and demand as outdated as the gas guzzler.

S&MM **Sales & Marketing Management** (ISSN 0163-7517), a Bill publication, is published monthly except in February, April, July, and October, when it is published twice a month. Controlled circulation postage paid at New York, N.Y. 10001, and East Stroudsburg, Pa. 18301. Form 3579 requested at 633 Third Ave., New York, N.Y. 10017. Executive, editorial, and circulation offices: 633 Third Ave., New York, N.Y. 10017. SUBSCRIPTIONS: U.S.A. and Canada, $28 a year. Foreign, $45. Allow 4 to 6 weeks for first issue to arrive. Member of the Audit Bureau of Circulations, American Business Press, Business Publications Audit of Circulation, and Magazine Publishers Assn. © Copyright **S&MM** (Sales & Marketing Management), 1979. All rights reserved.

50 Plus, gets 45% of his audience through corporate subscriptions. He predicts that circulation, now 180,000, will hit 300,000 by next July. Subscribers pay $8.95 a year. The one-time rate for a four-color ad is $2,880.

EXPANDING MARKETS

Commuter airlines spread their wings

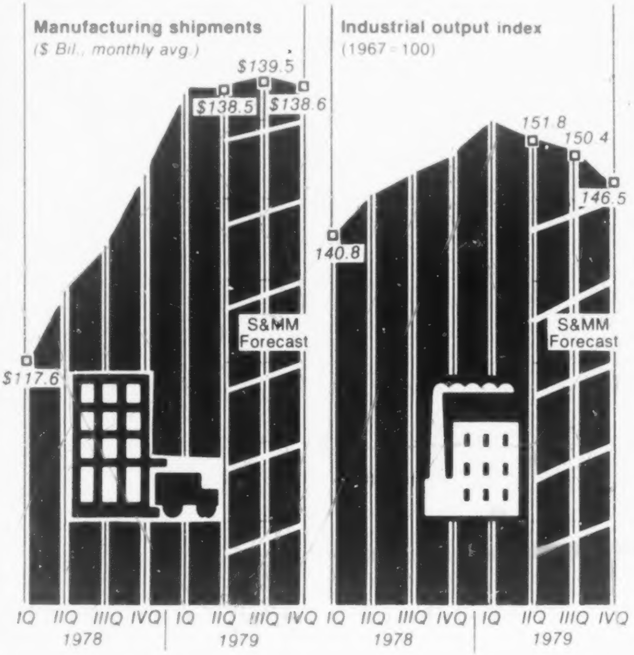
Deregulation of the airline industry is proving to be a boom for the 258 small U.S. carriers that call themselves commuter airlines (defined as those flying no planes with more than 60 seats and with routes limited to 250 miles). The Commuter Airline Assn. of America reports that its members:

- Will haul 12 million passengers in 1979—up 22%;
- Have replaced trunk carriers at 50 airports since deregulation and will supplant another 30 by year-end;
- Will increase their current 1% share of total passenger traffic to 10% by 1990.

All that is thrusting the commuter carriers into marketing for the first time. For example, Air Florida christened a new route recently by paying the first planeful of passengers a reward of $1 each. Provincetown-Boston Airlines, the nation's oldest commuter, inaugurated a route from Boston to Cape Cod's Hyannis Port with 50%-off coupons. Mississippi Valley Airline, La Crosse, Wis., hopes to better its 125% rise in passenger traffic this year by advertising that its two new 30-seat SD 330 turboprops include galleys, heads, and flight attendants—still a

S&MM BAROMETER

For industrial marketers this year, a sotto voce finale



Industrial salespeople, who usually close out a year in a frenzy of activity to qualify for bonuses, face rough going in 1979's fourth quarter. Consumer spending is still lethargic, so manufacturers will concentrate on paring inventories, which jumped 1.9% in July, the largest monthly increase since 1974. As a result, relatively few manufacturers will be in a mood to buy.

The consensus is that overall industrial output will drop 0.9% in the third quarter and then plunge a steep 2.6% in the fourth quarter. That implies that manufacturing shipments will, at best, cling to their second-quarter rate, $138.5 billion a month, in the fourth quarter or even head downward. Meanwhile, new orders—S&MM'S calculations show they slipped 2.1% in the second quarter and 1.5% in the third quarter—are expected to fall at a faster rate in 1979's final quarter.

Sources: S&MM calculations; U.S. Dept. of Commerce, *Manufacturers' Shipments, Inventories, and Orders* monthly report; Federal Reserve Board, *Industrial Production* monthly report.

marketing executives earn

Meanwhile, perquisites or "perks" lost much of their glamour among corporations in 1978 and will continue to, thanks to the tax agent. Few perks give the executive a tax advantage any longer, and many are now actually tax handicaps. However, nearly every company in the survey still provides its executives with such fringe benefits as reimbursement for uninsured medical expenses, payment for earned vacation time not taken, life insurance policies, and personal financial counselling.

In the future, top sales and marketing executives and the managers who work under them could see their compensation take another major leap if the Carter Administration grants business executives a pardon from its 7% ceiling on base salaries and wages, as the prestigious Business Roundtable recently urged. The Roundtable's 109 members want corporations to be allowed to give pay raises of up to 10% to those employees who do not have cost-of-living allowances included in their contracts, as do most workers who belong to unions.

One reason for the recommendation is that corporations abiding by the 7% voluntary ban fear they could lose hard-to-replace executives to competitors that grant larger hikes without violating the President's ban. If Carter is agreeable, and profitability continues to be healthy, next year's survey could be cause for celebration for even more executives.

Executive compensation survey

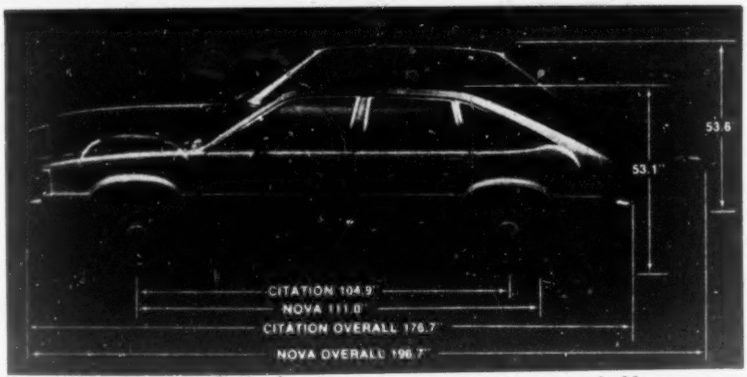
Fleet cars
1980

THE SQUEEZE IS ON

By JOHN MUTTER
Associate Editor

The frantic pursuit of better gas mileage has set off a clashing of gears in the market for sales cars. Suddenly, everyone wants to switch to smaller cars, and there aren't enough to go around. What's more, commercial users, like their consumer counterparts, are hesitant to snap up the larger vehicles that Detroit has in abundance. Comments Bob Henderson, director of national fleet sales at Buick: "The rules of supply and



Chevy's Citation is more than 1.5 ft. shorter than last year's Nova.

demand have been thrown completely out of whack."

To see how the rules are changing and explore how fleet managers are reacting to gasoline at $1 or more per gallon, S&MM conducted a survey of sales and marketing executives. Among the findings:

- A majority of respondents plan to maintain current fleet levels over the next three years. Only 27% intend to increase the number of sales cars. Another 10% foresee reducing their fleet size.
- In the coming year, 5.9% of the respondents plan to drive significantly less, while 26.8% plan on a slight decrease.
- Over 40% of the respondents say they've changed territory coverage. Half of them say they don't know if the changes are permanent while 7% say definitely that they're here to stay.
- Telephone selling is used by 42.4% of all respondents as an alternative to cars. Many of these companies also use direct mail. Of those that have added those activities or increased them, 47.2% say the changes are permanent.
- The overwhelming majority (66%) of salespeople dislike small cars.

Even though many companies are tightening up on their use of cars, the sales-car fleet obviously is here to stay. Stan Chason, president of Gelco Fleet and Management Services, Eden Prairie, Minn., maintains, "No one's getting out of fleets. These fleets are necessary for business activity." Louis J. Boos, sales manager at Sandy Hill Corp., Hudson Falls, N.Y., agrees, speaking for many sales executives when he says, "Our type of selling requires face-to-face discussion with customers. We will continue to reach them primarily by car."

Nonetheless, the sales executive who's trying to decide on which cars are best for his organization runs up against more questions than ever. On top of gasoline price increases and shortages, he's confronted by continued (and sometimes confusing) "downsizing" of car models, an unstable used-car market, and salespeople who want to keep the big cars they're used to.

"The reaction to these sorts of things has been all over the map," says George R. Frink, fleet sales director at Chevrolet. "Some companies get quite emotional." Roy A. Houston, manager of marketing for the Fleet Div. of Chrysler, concurs: "It's gotten so that some fleet owners will buy a car with a four-cylinder engine even if the miles-per-gallon estimates are better for a six-cylinder engine in the same model," he says.

What are the smart companies doing? Houston says,

George R. Frink, director, fleet sales, at Chevrolet

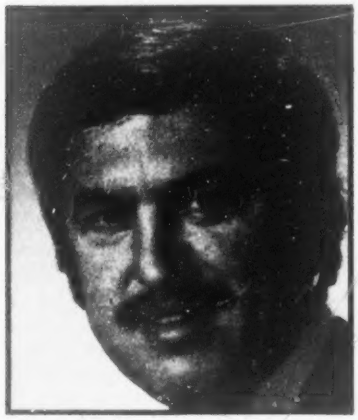
William R. McCreedy, manager, Ford Authorized Leasing System

John A. Rowley, leasing and fleet sales, Lincoln-Mercury

"They're holding their ground, not jumping to the smallest, most fuel-efficient car, which many times doesn't meet the needs of the sales force." However, the National Assn. of Fleet Administrators' (NAFA) annual new-car survey indicates that the majority of new cars for the 1980 model year will be compacts. Robert Burke, executive director of NAFA, notes that this is the first time since the survey was begun that compacts are the top choice of fleet administrators.

American Motors (AMC), which has long offered small cars, also attests to their popularity this year. Marty Levine, fleet marketing manager, says AMC's order bank for fleet passenger cars is the highest ever for the company.

It's not surprising that fleet managers are clamoring for smaller cars. For example, the Chevy Citation, one of General



Chuck Parker, president of Rollins Auto Leasing

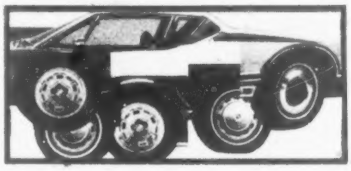
Highlights of S&MM's sales-car survey

1a. What has been the effect of gasoline availability (particularly last June and July) on your sales force activity?

Significant	11.2%
Moderate	55.6
Little or none	33.0

b. This effect was:

Everywhere	22.3%
Only in some areas	77.6



2. Where have fleet costs risen most?

Initial car prices	51.6%
Maintenance and repair	30.0
Insurance	13.7
Administration	1.9
Lease terms	22.8
Gasoline	84.3

Totals exceed 100% because some respondents gave multiple answers.

3. During the next three years, do you plan to:

Increase the number of fleet cars	27.0%
Reduce the number of fleet cars	10.9
Maintain current levels	62.0

4. What changes have you made or do you plan to make in using fleet cars?

	Have Done In Past Year	*Plan To Make In Coming Year*
Reduce driving significantly	2.7%	5.9%
Reduce driving slightly	19.0	26.8
Stay about the same	58.1	40.2
Increase driving in line with sales growth	20.0	26.8

5. What % of your fleet consists of small cars (compacts and subcompacts) and what will be the % three years from now?

	(% Of Respondents)	
% Of Fleet In Small Cars	*Now*	*Three Years From Now*
0%–24%	75.7%	34.8%
25%–49%	5.7	13.3
50%–74%	11.4	19.2
75%–100%	7.1	32.5

6. What is your sales force's attitude toward small cars?

Positive	7.6%
Neutral	26.5
Negative	65.7

7. Do your salespeople have any problems with storage space in small cars?

Yes	61.2%
No	38.7

8a. As a result of gasoline price increases and shortages, have you changed territory coverage in any way?

No	59.5%
To a small degree	35.4
Significantly	4.9

b. Are these changes:

Temporary	7.2%
Permanent	43.6
Don't know	49.0

9a. Have you used outside consultants to hold down costs?

Yes	6.4%
No	93.5

b. If not, do you plan to?

Yes	3.4%
No	96.5

10a. Have you used other methods of selling as a result of rising fleet car costs?

Telephone	42.4%
Mail	20.9
No change	43.1

b. Are these changes:

Temporary	4.1%
Permanent	47.2
Don't know	48.6

Totals exceed 100% because some respondents gave multiple answers.

Survey results are based on a mailing to 1,000 S&MM subscribers. By the cutoff date, 250 questionnaires were received. Of those who responded, 153 provide sales cars to some of their salespeople. Thus the base for all responses is 153 except where otherwise noted.

Motors' new X-body cars, gets as much as 45% better mileage with an automatic transmission and four-cylinder engine over the model it replaced, the Nova. For a large fleet that may spend $10,000 a week for gasoline, savings could amount to $4,000 a week. But many auto manufacturers are quick to point out that downsizing of full-sized and intermediate cars has made all cars more efficient. Chevrolet's Frink claims, "If all cars on the road were current full-sized Chevrolets, there'd be no gasoline shortages." John A. Rowley, major leasing and accounts manager at Lincoln-Mercury, notes, "Much of the recent jump in gasoline prices is offset by better mileage rates." Moreover, because of federally mandated corporate average fuel economy (CAFE) requirements for manufacturers, further improvements can be expected. Auto manufacturers also cite the benefits of new technology in reducing maintenance costs for all classes of cars. Intervals between tune-ups and oil changes, for example, are increasing.

Still, such small cars as the Ford Fairmont, Plymouth Horizon, Dodge Omni, and GM's X-bodies (in addition to the Citation, there are the Oldsmobile Omega, Buick Skylark, and Pontiac Phoenix) are not available in the quantity desired. Chuck Parker, president of Rollins Auto Leasing, Wilmington, Del., estimates, for example, that someone ordering X-body cars must wait six months for delivery. Gelco's Chason thinks many customers are willing to put up with the

Getting started in fleet cars

Say you're a sales manager of a small sales force, and your company is considering leasing or buying sales cars for the first time. What are the major decisions you must make?

Roy Houston of Chrysler recommends that the sales manager get in touch with a number of leasing companies even if he wants to buy. "The person should find out what is offered and why," he says. "And he shouldn't take just one answer; there's no single program that fits everyone perfectly."

The major criterion for buying is having enough cash to tie up in ownership. If a company is well-heeled enough for that, the next step is to decide who will handle fleet administration. Some buy cars but have leasing companies manage them. As Lincoln-Mercury's John Rowley notes, "More and more leasing companies are managing fleets as well. They supply most services a company doesn't want to supply itself."

But if a company wants to take on fleet management responsibilities, Robert Burke of the National Assn. of Fleet Administrators notes that the company must find an executive who has time to get to know dealers and manufacturers and learn the intricacies of the used-car market. "It's a complex area of management," he says.

For this reason and others, most companies choose to lease. Burke says that in this case, the sales manager must take his sales force's geographical location into consideration. "If it's a local sales force," he advises, "then local leasing companies should be approached." In addition, the sales manager should keep in mind that most auto dealers handle local car leasing, sometimes even for fleets of over 100 vehicles.

National leasing companies are recommended for national sales forces. Among the reasons for this: The national lessor can coordinate different localities' licensing and tax laws and provide a national network for handling sales-car emergencies.

long lead time. "They just keep driving the old car until the new one comes in," he says. But as Chevrolet's Frink points out, "In that amount of time, anything could happen to the present car. If it breaks down, the extra rental and repair costs could easily exceed the savings from the new car."

The difficulty here, as Lincoln-Mercury's Rowley sees it, is that some companies are demanding the small car for the wrong reasons. "They're making a knee-jerk reaction," he says. "Often an edict from top management will come down saying something like, 'We will drive only six-cylinder-engine cars.' "

For all companies, the vagaries of the used-car market are a big factor in selecting makes and models. This summer, demand for larger used cars was exceptionally weak and contributed to the sudden shift to compacts. William McCreedy, manager of Ford Authorized Leasing System, explains: "Many companies look at a car for its resale potential first. They've seen what's happening in used cars, and that's affecting their fleet buying."

Nonetheless, Lincoln-Mercury's Rowley hints that some companies aren't giving sufficient consideration to resale value. He maintains that because of their consistently good resale value, fleet managers need to overcome a reluctance to provide such sporty cars as the Ford Mustang, Lincoln-Mercury Capri, and Pontiac Grand Prix. "If companies really want to control costs, they're going to have to keep resale values like this in mind," he says.

Conditions in the used-car

Imported cars crack the fleet market

Ron Green of Toyota

Over the years, imported cars have generally been considered taboo for sales fleets, but the gasoline crunch has changed all that. An increasing number of fleet managers now regard import models as reliable cars that are reasonably priced and economical to operate.

Ray Barnett, national fleet and leasing manager at Nissan Motor (Datsun), says that a breakthrough for Datsun's fleet marketing has been the use of the company's cars by local and state governments. When fleet administrators for corporations discover that the states of California and Florida and the city of Los Angeles, for example, have Datsuns on their selection list, the implied endorsement helps his cause tremendously, he says.

How does Barnett respond to the inevitable objection from companies that want to "buy American?" "As a result of our presence in the U.S. auto industry, more Americans are employed in such areas of business as shipping, docking, trucking, dealerships, servicing, and parts manufacturing than would otherwise be the case," he says.

Ron Green, national fleet and lease administration manager for Toyota, says that one of his biggest marketing problems is that "people don't think we're out to get fleet business." Indeed, Toyota, the No. 1 import in the U.S., has been in the fleet business just five years. Green explains, "Only recently did we become a large enough proportion of the parent company's export business to guarantee ourselves enough cars for fleet business."

Toyota's fleet strategy has been to concentrate on the rental car companies, but Green says he's beginning to detect more interest nationwide from sales fleets. "Local and national fleet sales represent only 8% of our total sales," he says, "and we expect continued growth."

Datsun's peppy 210 gets 35 m.p.g.

market are also affecting the terms of many fleet leases. When the used-car market is good, companies tend to opt for open-ended leases, in which the company pays less and assumes the risk of reselling the car. "But when the used-car market is bad," Rollins's Parker notes, "quite a few companies tend toward close-ended leases. They're more expensive, but the leasing company assumes the risk. We may see a lot more of that now."

Leasing cycles, the amount of time the car is held, continue to lengthen. Whereas a few years ago 24 months was standard, the average now is near 30. But this figure may not go much higher: after 30 months many cars are near the 50,000 to 60,000 mileage level after which resale value drops significantly.

Few manufacturers and leasing companies expect to see much change in the perennial question of leasing vs. ownership. Approximately 80% of all fleets are leased to begin with. Most often, the ones that are company-owned are managed by leasing companies anyway. Thus for the most part, the difference between leasing and owning boils down to who possesses the title for the car.

Despite the rush to smaller cars, many operators are holding up on their 1980 fleet orders. Rollins's Parker says, "On the whole, fleet people really aren't sure which way they want to go, so they aren't making decisions." Ford's McCreedy notes that "gasoline prices and availability problems are confusing the fleet owner as much as the retail buyer. The auto industry sees this in fleet orders that don't

A phone in every sales car? Not yet

Many a sales manager has yearned to be in instant communication with his salespeople when they're on the road, but until recently there hasn't been much he could do about it. Now, the in-car telephone makes it all possible, but there's a limit on how many can be in use and, let's face it, you pay for the service.

The mobile phones themselves may be obtained from two types of suppliers. First are the major telephone companies—Bell, General, and Continental. Then there are about 600 radio common carriers (RCCs), whose main business is operating local paging systems. Getting the hardware doesn't put you on the air, however. Because the Federal Communications Commission assigns a limited number of radio channels to these phones, only a finite number of customers can be accommodated at any one time. Thus the potential subscriber usually must wait a year; in urban areas it may be even longer.

Most mobile units are leased to subscribers. Fees differ, but they generally run along these lines: installation, $70-$100; basic monthly service, $60-$100 (when higher, the charge may include a certain number of "free" minutes); rate per minute, 25¢-40¢. (In some cases the rate increases with the length of the call to discourage callers from blocking radio channels.)

Outside his local subscriber area (30-50 miles), a person with a mobile phone must connect with another RCC or telephone company. For technical reasons, this is not possible in all cases. Information on this subject should be requested from suppliers. In almost all cases, subscribers are able to dial as if using a regular telephone. Connection to the wire telephone network is done automatically by computer.

The easiest way to find out about service in a particular area is to call both the regular telephone company and the RCCs that are listed in the Yellow Pages under "Radio Communication Equipment and Systems." Shop around—rates and plans vary significantly.

match the rates of previous years."

One possible reason for hesitancy: reaction by salespeople to the downsized car. Gelco's Chason says, "Salespeople like the biggest car they can get." Chrysler's Houston: "Salespeople resist smaller cars."

In S&MM's survey results, only 7.6% of the respondents report salespeople reacting positively to small cars. Wyn Hoag, national sales manager for the Water Systems Div. of the Millipore Corp., Bedford, Mass., says, "The automobile is a two-edged sword: on one hand, costs are skyrocketing so they're being downsized; but on the other hand, the larger car is part of the salesperson's image. It enhances his self-esteem and is therefore a key element in the total remuneration package provided by the company. As such, it helps you hire and keep top salespeople."

NAFA's Burke says that most companies have taken downsizing step by step, so that opposition from salespeople is reduced. This year, however, Burke says the big jump down poses potential problems—so "many fleet users are loading up smaller cars with company-paid options." As a result, on smaller cars, such one-time luxury items as air conditioning, AM-FM stereo radio, power steering, and power brakes are almost standard for fleets. More companies also provide cruise control and an overdrive gear, which usually improve mileage. Gerald A. Schubert, director, sales and marketing, Apache Products, Linden, N.J., confirms the effectiveness of the strategy: "Our salespeople appear to be receptive to smaller cars—*if* they are deluxe."

Such "loading" of small cars produces some interesting twists. Bob Henderson says his Buicks, previously not heavy fleet sellers because they were reserved for a few people at the top of the sales staff, are enjoying a sales surge. He says, "Companies tell their salespeople, 'Yes, we're downsizing, but we're going up a nameplate. You won't have the big car you're used to, but we're going to put a Buick in your driveway.' "

Rollins's Parker is also optimistic about getting salespeople to accept small cars. If companies make clear "the connection between high, uncompetitive selling costs and the big car so many of their salespeople like, they'll have a much easier time," he says.

Another person who thinks there will be a smooth changeover to small cars is Ray Berlin, executive vice president of Wheels, Inc., Chicago. "When companies tried to get into small cars after the 1973 oil

Joseph Farris

"Be sure to ask George about his tomatoes."

Copyright, Sales & Marketing Management

embargo, salespeople reacted badly," he says. "The main reason was because the small cars then just weren't that good. Now it's a different story."

Problems with storage space is another major objection sales managers and their salespeople raise against small cars. (Over 60% of S&MM's survey respondents report such problems.) Some companies with large samples require spacious trunks. Moreover, if several salespeople are riding together or with a sales manager, they complain that there's not enough room for everyone plus their luggage and samples.

Auto manufacturers and leasing companies reply that considerations like storage space are the things that too many companies overlook in their insistence on getting top fuel economy. Frink of Chevrolet says that in "normal years" the most important criteria for car selection are, in descending order, (1) resale value, (2) prior experience with the vehicle, (3) trunk space, (4) interior space, and (5) economy. Now, he says, "fuel economy is generally a close second to resale value." To illustrate the point, he adds, "If many companies can get an X-body car, they don't care about trunk space." Such shortsightedness leads, as Chrysler's Houston puts it, "to expensive retreats down the road."

AMC's Levine already sees encouraging trends toward sound decisions based on business needs. His company's Eagle, the first U.S.-made four-wheel-drive passenger car, which uses a Jeep undercarriage and an AMC body, has been successful since its August introduction despite a lower mileage rating than other cars comparable in size. "We've sold some as fleet cars sight unseen," he says. "Any type of business where people *have to* get where they're going is our market.'

In some instances, of course, the fuel crunch has led companies to drop fleet cars in favor of reimbursing salespeople for the use of their personal cars. For example, Jay D. Langer, marketing manager for Chemical Sciences, Whippany, N.J., says, "We are systematically eliminating fleet cars and providing salesmen with a flat-rate car allowance

and mileage compensation. This encourages the men to select fuel-saving cars if they have no hangups about driving smaller vehicles."

Humberto Velez, sales control supervisor for TAP, the Airline of Portugal, New York City, notes that his company is not leasing cars anymore. "We're giving car allowances," he says.

In fact, Runzheimer & Co., the transportation consulting firm, says that reimbursement under an equitable plan can be an effective alternative to leasing or buying sales cars. Judith Dettinger, field consultant, Transportation Div., recommends "automobile standard allowances," which combine a fixed dollar payment for such costs as insurance, license fees, and taxes with a variable cents-per-mile payment covering gas, oil, maintenance, and tires. "This method," she says, "allows for fairness by tailoring reimbursement of car use to the particular automobile, home city, and travel territory."

Whatever road they choose —leasing, buying, or reimbursement—marketers gradually are coming to realize that the role of the auto in carrying out their strategies has been permanently altered. This is pointed up repeatedly in the responses to S&MM's survey and in interviews with fleet-car people. During the oil shortage five years ago, many companies had their salespeople jump into small cars for a while, only to return to gas guzzlers once the crisis eased. Now the trend is unmistakable. Says Chuck Parker of Rollins, "This time, I don't see people going back to big cars." ■

the medium that puts the "closing touch" on your marketing/media plan

Section A

Data in this *Survey of Buying Power—Part II* have been organized into six sections. The black index tabs along the right-hand edge of the book provide easy access to each section.

How to use the data in this Survey to increase profits and sales

The future is purchased by the present.

—SAMUEL JOHNSON

By THAYER C. TAYLOR
Editorial Director
Survey of Buying Power

When the future turns cloudy, sales planning must be sharper. Given the mixed scenarios that forecasters are writing for 1980, wary marketers may have more qualms than usual as they prepare next year's local market strategies.

While local markets are not immune to the ups and downs of the national economy, neither do they react in a uniform manner. Based on their innate strengths and weaknesses, some will fare considerably better than national trends suggest; others will do poorly compared with the national indices. The marketer's canniness in picking and choosing among the varied opportunities and problems posed by local markets will strongly influence his bottom-line results. Helping the marketer to make those choices in a more intelligent manner is the mission of *Sales & Marketing Management's Survey of Buying Power—Part II.*

A markets and media planning issue, *Survey II* gives the marketer a long-range view of market change, a close-up look at the product potential of individual markets, as well as insights into the sales dynamics of his two most popular media markets: newspaper and TV.

In the 1978–83 forecast period, according to *Survey II,* the marketer will be cheered by a faster growth in the number of prospects. Total population is expected to expand 5.1%, somewhat stronger than the 4.2% gain of the 1973–78 period.

Nonmetro areas, reflecting the trend that first surfaced in the early 1970s, will continue to set the pace. The population living outside of S&MM's 300 metropolitan markets will increase 6.5%, to 58.6 million, by 1983 vs. a rise of 4.6%, to 172.4 million, in the metro areas.

Marketers whose goods are bought on a household basis will enjoy even better prospects, with such buying units increasing 11.2%, twice as fast as population, in the five-year forecast period. Here, too, the growth rate will be more rapid

SURVEY HIGHLIGHT

Nonmetros will set the pace through 1983

	1983 Projected Estimates	Projected % Change 1978–83	Actual % Change 1973–78
POPULATION (Thous.)

Metro	78.0991	− 0.7%	− 0.1%
Nonmetro	21.9009	+ 2.7	+ 0.4

N.C.—No change; 100 is an index figure equivalent to the total U.S. sales potential for that year. The metro and nonmetro indexes are shares of the total U.S. sales potential.
Note: The 1983 projections apply to the 300 S&MM metropolitan markets as they are currently defined. By 1983, the Census Bureau will have probably made many changes in metropolitan boundaries as the result of the 1980 Census of Population and Housing.
Source: *Sales & Marketing Management's 1979 Survey of Buying Power—Part II.*
© Sales & Marketing Management.

in the nonmetro areas than in the metro markets—12.3% vs. 10.9%.

However, because employment growth will decelerate during the next few years as a result of changing age demographics, Effective Buying Income (EBI) will rise less than it has in recent years. Total EBI will rise 61.4% in the 1978–83 period compared with 63.4% in 1973–78.

With EBI growth slowing and household growth accelerating, the typical consumer buying unit's income will improve at a slower rate. Indeed, average EBI per household will increase 45.1%, to $27,168, as against a 48.2% gain between 1973 and 1978.

While these broad trends delineate the marketing environment of the early 1980s, it is within the local markets where the marketer ends up as a winner or loser. Selecting the

The fastest-growing metros will continue to show a geographical imbalance in the 1978–83 forecast period. Of the 26 markets expected to post the highest growth rates, 17 are in the South, 8 in the West, leaving only one such market in the Midwest and none in the Northeast. The imbalance will prevail within regions as well, with 11 of the 17 Southern markets located in Florida. That state will also get its third million-plus market, Fort Lauderdale-Hollywood, where a 17% growth rate will lift the population to 1.1 million. (See table below.)

Note: **S&MM's TV Markets** are based on American Research Bureau's (Arbitron) Area of Dominant Influence.
Source: *Sales & Marketing Management's 1979 Survey of Buying Power—Part II.*
© Sales & Marketing Management

Although the majority of the TV markets with the greatest number of blacks are in the South (17 of the top 25), markets in other parts of the U.S. also offer promising sales targets. For example, blacks' 17% share of Chicago's population, and 16% in both Detroit and Philadelphia, exceed the comparative ratios in such Southern TV markets as Dallas-Fort Worth and Miami, each having 14%. All told, 62% of the U.S.'s black population lives in the 25 markets listed here. Furthermore, blacks comprise 17% of the aggregate population of the 25 markets.

© Sales & Marketing Management

Just as the fastest-growing metro areas are concentrated in the South and West, so the declining markets are bunched up in the Northeast and Midwest. Of the 30 markets expected to suffer population losses in the 1978-83 forecast period, 12 are in the Northeast, 16 in the Midwest. Three states will have more than half the slipping metros—Ohio, 7; New York, 5; and Indiana, 4. One comforting sign: The 30 likely losers in the 1978-83 period represent a sharp drop from the 37 that were pegged a year ago to lose people in the 1977-82 period.

*Potential metro market as defined by S&MM.
Note: Rank applies to average Effective Buying Income per household.
Source: *Sales & Marketing Management's 1979 Survey of Buying Power—Part II.*
Sales & Marketing Management.

Despite all the talk about population shifts from the North and Midwest to the South and West, the two older regions still have considerable clout, judged by their Effective Buying Income per household. Of the 25 metro areas that will boast the most affluent buying power in 1983, 10 are in the Midwest, 6 in the North. Trailing are the West, with 5, and South, 4. Three small markets will rack up spectacular gains in the top market rankings during the five-year forecast period—Saginaw, Mich., leaping from 15th to 7th; Kokomo Ind., from 18th to 9th, and Janesville-Beloit, Wis., 36th to 21st.

markets where selling pressure must be accented or depressed, allocating advertising dollars among markets where returns will be handsomest—these are some of the decisions that will spell the difference between black or red ink. The various statistical sections in *Survey II* give the marketer the input he needs for productive market decisions. Here's a brief look at how to use the information in each section of the *Survey*.

Section B: Merchandise Line Sales

An underutilized analytical tool, merchandise line sales (starting on page 37) provide sharper estimates of product potential on a market basis. Unlike retail store sales totals, which represent the aggregate purchases of a wide assortment of products, merchandise line sales focus on specific product categories.

Hence, the marketer can analyze with greater precision the contribution that each local market should make to his total volume. A marketer of drug products who sells in the seven metro areas that cluster around the Missouri/Kansas border, for example, can use the data to evaluate market performance and analyze distribution channel efficiency.

First, he adds up the data in the "Drugs & Other Health Aids" column; then he computes each market's share of the total. A comparison of each market's share with his own sales records looks like this:

Metro Market	% Of Drug Category Sales	% Of Company Sales
Missouri		
Kansas City	58%	61%
Springfield	9	6
Joplin	6	4
St. Joseph	3	2
Kansas		
Wichita	16	20
Topeka	6	5
Lawrence	2	2

He quickly learns that his sales force is doing better than can be expected in his two biggest markets, Kansas City and Wichita, where the share of company sales is greater than that suggested by the merchandise line sales breakdown. This also indicates that potentially there is additional business to be gained if he sharpens his selling tactics in the smaller markets.

The section's distribution channel data, where sales volume is shown for the leading store type associated with the product category, offer clues on where selling emphasis should be placed. Here, the marketer calculates the share of drug product sales moving through drugstores in each market and comes up with this finding:

Metro Market	*Drugstore Share Of Category Sales*
Missouri	
Kansas City	66%
Springfield	67
Joplin	72
St. Joseph	86
Kansas	
Wichita	60
Topeka	69
Lawrence	54
7-market total	66

That reveals that drugstores in Joplin and St. Joseph are effective pipelines to consumers but that their counterparts in Lawrence and Wichita are considerably weaker. One conclusion: Stronger merchandising

SURVEY HIGHLIGHT

Brighter future for the leading regional metros

Marketers who concentrate on the biggest metro areas within each of the four major geographical regions can look forward to a better selling environment in the 1978–83 forecast period. In both the North and Midwest, those markets will turn from a slight net loss in population during 1973–78 to a slight gain in 1978–83. The South's big ten will expand at a somewhat faster pace than previously (8.9% vs. 7.6%), but the West's counterparts will decelerate (from 7.7% to 6.5%). Considerably fewer markets are expected to lose people in the coming years—only 6 in the forecast period, compared to 13 in the preceding five years.

THE MEDIA PLANNER'S GUIDE

THE WALL STREET JOURNAL.

The Wall Street Journal is essential reading for millions of decision-makers, nationwide, every business day.

Why? Because The Journal provides the news and information they need to know, and provides it when and where they need it most.

The Journal style is concise, comprehensive. Basic requirements for a publication that's viewed as the most useful to managers and executives.

Before you finalize any media schedule, consider the research that compares The Journal with other media. And consider the facts and figures that document The Journal's extraordinary value.

TOP AND MIDDLE MANAGEMENT.

Since 1968, Opinion Research Corporation has studied reading preferences among top and middle management executives in America's 800 largest corporations. In every ORC study—conducted quarterly—The Journal has been the clear-cut first choice. Here are the results of the latest report.

Regular Readership of Publications by Top & Middle Management

Publication or Periodical	% reading at least 3 of every 4 issues
The Wall Street Journal	74.0%
Business Week	58.5%
Time	42.5%
National Geographic	40.4%
Forbes	38.3%
Fortune	36.4%
Newsweek	29.7%
Dun's Review	28.8%
Reader's Digest	28.1%
Sports Illustrated	25.5%
U.S. News & World Report	22.9%
New York Times (Sunday)	22.2%
Harvard Business Review	21.0%
Nation's Business	20.2%
New York Times (Daily)	16.9%

The Journal wins, hands down, when you look at executives in these same companies in terms of special categories:

Category of Executives	Regular (3/4 issues) Readers of The Journal
Executives less than 40 years old	70.6%
Executives who are college grads	75.6%
Executives with net worth of $350,000 or more	86.4%
Executives who own $100,000 or more of stock	87.4%

THE DECISION-MAKING PROCESS.

Journal readers play a pivotal role in decisions that affect your company's future, your industry's future, your future.

Consider, for instance, this table, showing the number of Journal subscribers who make or influence decisions that show up on your bottom line.

Product/Service	# of WSJ decision-makers
Advertising media	401,500
Aircraft/helicopter	41,400
Bank services	440,400
Building materials or equipment	329,700
EDP/computer equipment, services, software	317,500
Freight or transportation services	208,000
Insurance (property and/or employe benefits)	451,300
Office furniture/fixtures/floor coverings	529,200
Office machines, (calculators, copiers, etc.)	552,300
Real estate or new plant site: U.S. and abroad	289,500
Security systems/services	215,300
Selection of sites/accommodations for conventions or sales meetings	231,100
Travel arrangements/accommodations for traveling executives, salesmen, employes	397,800

ALTERNATIVE MEDIA CHOICES.

No other publication matches The Journal's concentration of readers in corporate America and neither can any other medium. As shown by a study of 1,200 chairmen, presidents and chief executives:

73%	regularly read The Wall Street Journal
62%	regularly view some television news programs
46%	regularly view some television sports programs
43%	regularly read the top U.S. newsweekly
40%	regularly view some prime time television programs
39%	regularly listen to some radio news program
32%	regularly read the top U.S. business weekly

THE AFFLUENT AUDIENCE.

The Journal reaches affluent America.

Journal subscribers have a median household income more than twice the U.S. median, an average household net worth of $404,560, and one of every twenty is a millionaire!

Further proof of The Journal's effectiveness in reaching the affluent audience came from a study comparing the reading habits of this elite segment of the American market. Compare The Journal's ability to reach Americans with a personal income of $50,000 or more with that of other publications:

Publication	# of affluent readers, average issue
The Wall Street Journal	547,000
Business Week	346,000
Dun's Review	114,000
Forbes	296,000
Fortune	298,000
Nation's Business	185,000
Newsweek	435,000
Sports Illustrated	310,000
Time	590,000
U.S. News & World Report	326,000
New Yorker	175,000
Scientific American	78,000
Smithsonian	232,000

TO THE WALL STREET JOURNAL.

A MARKET FOR TRAVEL, A MARKET FOR LEISURE.

Travel advertisers find The Journal a productive and efficient medium. A not unexpected result when you consider the travel of Journal subscribers:

- 87% have taken 1 or more domestic trips during the year.
- 83% traveled by commercial airliner.
- 78% took business flights—with 14% flying 25 times or more per year.
- 67% of the air travelers flew for personal reasons—with 13% taking 5 or more flights per year.
- 58% have taken foreign trips during the last 5 years—with 55% of these averaging more than 1 or more flights outside the contiguous U.S. every 6 months.

As indicated, many of the trips taken by Journal subscribers are for fun, not business. And The Journal subscriber's leisure activities are verified by this table, showing the percentage of Journal subscribers engaging in various activities—and the amount of money they've spent on their hobbies over a two-year period.

Activity or Hobby	% of WSJ subscribers	Average expenditures during last 2 years
Gardening	52%	$539
Golf	36%	$479
Photography	30%	$294
Tennis	27%	$223
Home workshops	25%	$349
Boating	23%	$1,701
Camping	19%	$744
Skiing	17%	$604
Stamp/coin collecting	16%	$787
Flying (private planes)	5%	$2,826

In two key market areas, The Journal audience represents a prime opportunity.

1 of 5 Journal subscriber families owns a music system based on stereo components—and they've spent an average of $533 on components in a 24-month period.

THE WALL STREET JOURNAL
What's News

In the same time period, the more than 1 out of every 4 families owning a still camera spent an average of $294 for photographic equipment.

VITALITY. DEMONSTRATED BY GROWTH.

Finally, consider the circulation growth of The Wall Street Journal.

In 1978, Journal attained circulation grew by 7%.

During the last five years, Journal circulation has grown by 21%.

No other daily, newsweekly, bimonthly, monthly serving business and management can match that growth rate.

Today the average daily paid circulation of The Journal stands at 1.6 million.

That's 8 million paid copies every week. And over 32 million paid copies in a month.

Astonishing acceptance. Based on The Journal's demonstrated ability to provide America's most important readers with the world's most important news.

And all good reason why any media planner should remember, before finalizing a media schedule, six short but significant words:

THE WALL STREET JOURNAL.
IT WORKS.

[illegible] Dow Jones & Company, Inc., 1979, The Wall Street Journal. All rights reserved.

SURVEY HIGHLIGHT

50 biggest newspaper markets in terms of households

50.	Providence-Pawtucket-Warwick	320.7	18,923	101	77.9

Notes: **EBI Per Household Index** calculated by dividing the U.S. average of $18,718 into the newspaper market's comparative figure: an index of 112 means it is 12% above average, an index of 98 means it is 2% below average.

EBI Per Household pertains to all the households in the market, not just the newspaper-subscriber households. For data on the income levels of subscriber households, consult the local newspapers in the market as to whether they have such information and the date of their latest research.

% Households Coverage is calculated by dividing the number of households into total circulation. However, because of duplicate circulation in multinewspaper markets—that is, a household subscribing to more than one newspaper—it must be used with caution.

tie-ins with drug outlets in the first two markets can produce extra sales, but in the last two markets he will have to give more attention to other types of outlets.

Section C: Metro Projections

Every marketer whose concerns stretch beyond next year's budget wants to be sure that his sales force resources are properly positioned to exploit the fastest-growing markets as well as to avoid being dragged down by declining markets. The five-year projections of U.S. metropolitan markets, starting on page 51, give the marketer a head start on his sales force needs in 1983.

Not surprisingly, the South and West will continue to spearhead population growth in the next several years, but as the table on page 9 demonstrates, certain leading markets in each of the major geographical sectors will differ appreciably from regional patterns.

In the South, where the regional populace will expand 8%, New Orleans will increase only 3.5%; San Antonio, 4.4%; and Washington, D.C., 4.8%. In the West, despite an anticipated 8% growth, Seattle-Everett will show virtually no change, and the two biggest markets will experience very modest gains: Los Angeles-Long Beach, up 2.3%, and San Francisco-Oakland, 1.9%.

Similarly, in the Northeast and Midwest, where each

As a rule, the bigger the newspaper market, the higher its household buying power. Thus among the first 20 markets in the ranking table, only 2 have an Effective Buying Income per household below the national average. However, among the bottom 20, ranked from 31st to 50th, 9 markets have households with subpar income levels. Significantly, the 10 top markets all have better-than-average household incomes ranging from $19,303 in Minneapolis-St. Paul to $24,477 in Washington, D.C.

Notes: **S&MM's TV Markets** are based on American Research Bureau's (Arbitron) Area of Dominant Influence. **Quality Index** is calculated by dividing the all-U.S. average Effective Buying Income (EBI) per household, $18,718, into the TV market's comparative figure. The average EBI per household applies to all households in the market.
Source: *Sales & Marketing Management's 1979 Survey of Buying Power—Part II*
Sales & Marketing Management

region's growth will be only 2%, several of the major markets will do somewhat better. In the Northeast: Nassau-Suffolk, up 4.8%; Providence-Warwick-Pawtucket, 3.9%; and Boston, 3.0%. In the Midwest: St. Louis, up 3.7%; Minneapolis-St. Paul, 3.[illegible]%; and Milwaukee, 3.3%.

The *Survey*'s metropolitan market projections are useful for planning future manpower needs. With data on the revenue per salesperson, population growth rates can provide clues to whether the marketer should concentrate on boosting salesperson productivity in 1983 or consider hiring additional personnel.

Take the case of a marketer who sells a consumer product that enjoys broad acceptance. In the six markets listed below, revenue per salesperson ranges from $100,000 to $114,000. Multiplying these averages by the population growth rate indicates what the average revenue will be in 1983 with the same number of salespeople.

Metro Market	% Increase In Pop	$ Increase Per Salesperson
Fort Myers-Cape Coral, Fla.	31.3%	$34,000
Brownsville-Harlingen-San Benito, Texas	24.6	28,000
Salem, Ore.	13.3	15,000
Poughkeepsie, N.Y.	4.4	4,000
Portland, Me.	3.4	4,000
New London-Norwich, Conn.	2.7	3,000

The significant increase projected for Fort Myers-Cape Coral suggests that sales force personnel will have to be added if the marketer wants to maintain current revenue levels. In the slower-growing markets, such as Portland, Me., Poughkeepsie, N.Y., and New London-Norwich, Conn., the increases are modest enough so that more effective training or incentive programs can boost per-person productivity enough

Make Fran Tarkenton part of your next sales meeting.

Introducing two great new films every sales team should see.
Here's a man your sales people should meet. Fran Tarkenton started out in pro football with a scouting report that read like an obituary: *"Too small, too slow, too weak, won't last a year."* But 18 years later, he owned five NFL records and earned a salary to match!

Even at $350,000 he couldn't afford to stay in football.
For the last nine years Fran has spent his off-season time turning an idea into a company. And that company is now a $3.5 million business!

How did he do it?
Does this son-of-a-preacherman/football great/business success have a secret formula? The answer is no. Instead, what Fran Tarkenton does have is an accurate assessment of himself and a few simple principles that allow him to turn his efforts into profits.

Two exceptional films.
Both deal with the cornerstones of Fran's success: style and time. He communicates with an audience the same way he does with a customer–one-on-one and straight from the shoulder.

"The Scramble" © (22:00)
Is it a helter-skelter run for your life? Or a carefully-planned strategy for success? Fran stresses developing a style that fits the individual . . . building on strengths . . . planning contingencies and knowing when to use them. Plus, the five key points that make "The Scramble" work in business.

TV Guide readers
Los Angeles

Cop-turned-writer Joseph Wambaugh calls the articles in TV Guide:

"Critical, incisive, and sharp."

"It seems to me that TV Guide doesn't prostitute itself to the industry it describes," notes Wambaugh, author and screenwriter of "The Onion Field." "The articles are critical of shows—network policy—even public television. That's what I like about it."

Mayme Clayton founded the Western States Black Research Center, the largest black history collection on the West Coast. "I always buy TV Guide," she told us. **"They discuss the pros and cons,** which give you an idea of what to look at, and what to let the children see."

America

Actor John Bodkin, whose home is a 30-foot custom sloop in Marina Del Rey, adds: "Television is everybody's window on the world. TV Guide gives you some understanding of how the system functions. **The articles have to have some impact on the industry."**

"Television is entertainment to my family, so it's an interest to us," says Jay Mullins, head of the California Skin Diving Schools. "The newspapers just don't get into tv. **TV Guide satisfies what I want.** It gives us a reflection of what's going on."

Carlos 'n Charley's Restaurant is one of Hollywood's most popular nightspots. Co-owner Bernice Altschul, better known as Grandma Disco, confirms: **"I like the articles in TV Guide.** They give you a lot of information right away. It's one of the only magazines my husband and I really have—and that's the truth."

From sunny L.A. to New York City, TV Guide grabs the attention of more prime prospects than any other magazine. Over 43 million readers, each and every week. It's the biggest, busiest, buying-est magazine audience in the land. And of all magazines, TV Guide reaches them with record speed, to give your product that extra push. Sell to America in America's best selling magazine.

to accommodate the greater workload.

Depending on the nature of the product, other data elements can be used for the same purpose. If the marketer sells a product bought on a household basis, such as a major appliance, the household projections will point to the greater revenue that each salesperson will have to produce. If he sells a premium-priced product, he can use the Effective Buying Income totals or the per household EBI averages.

SURVEY HIGHLIGHT

1978 changes in consumer spending

Groceries and drugs led the way in consumer spending increases last year, reflecting the considerably higher price tags those commodities carried. Surprisingly, furniture and sleep equipment registered the smallest gains among seven merchandise line categories shown here, although new home starts increased at an impressive pace. One possible explanation: Skyrocketing home-purchase prices may have forced consumers to defer spending for home furnishings until mortgage costs were absorbed.

SURVEY HIGHLIGHT

Consumer spending—minus inflation

Merchandise Line Category	Real 1978 Total Sales ($ Mil.)	% Increase, 1977–78 Real Total Sales	Price Index	% of Total Sales

© Sales & Marketing Management.

Soaring prices have so distorted retail sales totals as an indicator of consumer spending habits that marketers must adjust for price changes to get a better idea if shoppers are actually buying more or less of their products. When this adjustment is made, a dramatically different picture of what happened in retail stores last year emerges. For example, prices of groceries soared nine times faster than actual purchases—10.5% vs. 1.1%. Clothing appears to be the only category in which volume gains eclipsed price hikes on a real-term basis. Both women's and men's clothing purchases were up 5% compared with a modest 2% rise in price tags.

Section D: Newspaper Markets

Along with the most efficient deployment of sales personnel, the marketer also wants to be sure that his back-up support, in the form of advertising outlays, is also allocated efficiently. While many of the newspaper and TV market schedules that marketers use are dependent on rate and audience packages as well as age demographics, the *Survey* offers an objective measurement tool for comparing media markets. That is done by presenting for the individual markets the three basic sales dynamics—population, Effective Buying Income (EBI), and total retail sales.

Analyzing the newspaper markets data (starting on page 93) will reveal where markets that seem to be alike actually present varied sales-building opportunities. The markets listed below are similar in the number of household prospects.

However, with an almost $3,000 spread in the income of the typical household, they are very dissimilar. Dividing each market's total Effective Buying Income (EBI) by the number of households to compute an average EBI per household, the marketer learns that Indianapolis, which is 9% above the U.S. average, is the most attractive prospect for higher-priced products and that Oklahoma City, 6% below the U.S. norm, is the best prospect for lower-priced products.

Newspaper Market	EBI Per Hshld.	EBI Index (U.S.=100)
Columbus, Ohio	$19,324	103
Indianapolis	20,347	109
Omaha	17,875	95
Oklahoma City	17,509	94
Sacramento	18,809	100
Charlotte-Gastonia	17,982	96

The advertising medium itself, in terms of reaching targeted prospects, is another vantage point for evaluating local markets. Here, the "% Households Coverage" data offers added insights into the markets' relative strengths and

Five reasons why U.S.News *works* in the marketplace.

1

SIGNIFICANT JOURNALISM. Our news magazine's basic thrust, in the words of its Editor, is "to report, clarify, explain and project the news, to put events and people in perspective, as objectively as humanly possible." No cute writing. No gossip. No entertainment. A focus locked on the major news, wherever it happens, reported and analyzed in a way that earns praise from peers: "Best business news reporting from abroad"—Overseas Press Club, 1977. "Best in consumer journalism" —National Press Club, 1977. Our credible journalism opens windows of the mind. It can open doors for the advertiser, too.

2

READER INVOLVEMENT. At U.S.News, we measure it by the sum of its parts. In any given year, tens of thousands of people write to us about something they've read in the magazine. We know that nine in 10 U.S.News subscribers look into each quarter of the book. On the average, our subscribers spend more than two hours reading a typical issue; three in five pick it up on at least three different days. The bottom line is that U.S.News stimulates a responsive readership and enjoys cover-to-cover, repeat attention.

3

RICH MARKET, 9.4 MILLION STRONG. The 1978/79 Simmons Study projects our circulation of 2 million to a total weekly audience of 6 million men and 3 million women—readers with unmatched buying power, education and job responsibility among all large-circulation magazines. Their preference for our kind of news is so exclusive that *most* don't see advertising messages in Time. Or Newsweek. Or SI.

4

32 MARKETING OPTIONS. U.S.News offers 32 ways to go to market. *National* edition (rate base, 2 million—51 issues, including a year-end double issue). The *Blue Chip Demo*, a demographic edition new in 1979 (rate base, 400,000 high-income subscribers). *Million Market*, unique 11-state breakout plus Washington/Baltimore (rate base, 1.1 million). Plus *13* regular regionals, *16* regular metros.

5

LOW-COST TARGETING. The U.S.News advertiser can bank on out-of-pocket rates that allow frequency in the marketplace. The cost of one national page in Time buys two in U.S.News; the cost of two in Newsweek buys three in our magazine. Regional/metro advertisers who pinpoint or heavy-up in key markets with more than one insertion in the same issue (or consecutive issues) see their CPM's go *down* as combined circulation goes *up*. U.S.News offers fast-close capabilities; accepts gatefolds, preprinted inserts and saddle cards; and can be geared for geographic split and batch runs.

For more good reasons why U.S.News *works* in the marketplace, contact your nearest U.S.News representative in New York, Chicago, Boston, Cleveland, Dallas, Detroit, Los Angeles, Pittsburgh, St. Louis, San Francisco or Washington.

We spare our readers unimportant news.
We spare our advertisers unimportant readers.

Note: % change in **Effective Buying Income** (EBI) total computed before rounding. **Growth Index** calculated by dividing the U.S.'s expected 61.4% increase in EBI into the comparative % gain of the metropolitan market. An index above 100 means better-than-average growth; below 100, lower-than-average growth.

Source: *Sales & Marketing Management's 1979 Survey of Buying Power—Part II*
Sales & Marketing Management.

The impact of the movement of middle-class professionals, with their larger paychecks, out of the biggest metro markets is underscored by Effective Buying Income (EBI) trends among the top 25 metro areas. Only 7 of those markets are likely to post EBI gains at better than the all-U.S. pace in the 1978–83 forecast period. Not surprisingly, all are from the South, 4, and West, 3. Probably the most significant development that will occur is Miami's robust growth: its expected EBI gain of 82% will rank second to Houston's anticipated 87% increase. Result: The perception of Miami as a low-income market, stemming from the preponderance of the elderly on fixed incomes who live there, is changing. Apparently, the buildup of the older population (one-third of the city's residents are 50 or older) has triggered the development of professional-type services catering to the needs of that age group. For other reasons, see S&MM's Changing Markets, U.S.A., feature on Miami (Dec. 13, 1976).

Let's hear it for Enid, Iowa City, and Las Cruces!

Three markets that the *Survey of Buying Power* had identified as potential metropolitan areas became official standard statistical metropolitan areas early this month as a result of a decision by the Office of Federal Statistical Policy and Standards. They are: Enid, Okla., Garfield county; Iowa City, Ia., Johnson county, and Las Cruces, N.M., Dona Ana county. Thus the *Survey*'s 300 metro markets comprise 270 officially designated and 30 *potential* metro areas.

advertising cost structure. If the total households are converted to newspaper households, the six markets will shift in their relative appeal—Indianapolis becoming much stronger, for example, and Omaha weaker:

Newspaper Market	% Of Total Hshlds	% Of Newspaper Hshlds
Columbus, Ohio	17.05%	18.68%
Indianapolis	16.91	20.28
Omaha	16.66	13.29
Oklahoma City	16.57	17.33
Sacramento	16.55	16.25
Charlotte-Gastonia	16.27	14.18

Although less than one percentage point separates the smallest from the biggest newspaper market on a total household basis, the differences are perceptibly greater for newspaper households. Obviously, this comparison suggests that it will be more productive if some of the newspaper dollars earmarked for Omaha, Sacramento, and Charlotte-Gastonia are shifted to three other cities.

Section E: TV Markets

Also serving the marketer's need for more effective advertising planning is the *Survey*'s TV markets section, starting on page 147. Here, basic data on population, EBI, and retail sales are presented for each market, along with Sales & Marketing Management's exclusive Buying Power Index (BPI) that combines the three basics into an equivalent measure of sales potential.

The seven markets listed below are roughly comparable in total population, but have appreciable differences in their relative sales potential:

TV Market	% Of Pop	% Of BPI
Buffalo	15.15%	14.75%
San Diego	15.13	16.80
Phoenix	14.10	14.81
Nashville	14.09	13.47
Memphis	14.07	12.79
Charlotte	13.83	13.61
New Orleans	13.63	13.77

If a marketer originally plans to allocate $5,000 to each

TV market, he can further refine the BPI by building a quality index that will express the BPI as a ratio of its population percent (that is, divide the market's share of BPI by its share of population). Then, he can multiply the $5,000 originally assigned to each market by the adjusted index to get an idea of where he should increase or decrease his planned outlay. The results will look like this:

TV Market	*Adjusted Index*	*Adjusted Outlay*
Buffalo	97	$4,850
San Diego	111	5,550
Phoenix	105	5,250
Nashville	96	4,800
Memphis	91	4,550
Charlotte	98	4,900
New Orleans	101	5,050

A special feature of the TV section is the information on the black population. A TV campaign aimed at building sales in that important minority market must take its highly concentrated nature into consideration. For example, the seven TV markets with the greatest number of blacks contain over one-third of the black population, 36%, but only a fourth, 26%, of the total population, as the following comparison shows:

TV Market	*% Of Black Pop*	*% Of Total Pop*
New York	10.86%	8.33%
Chicago	5.70	3.82
Philadelphia	4.25	3.21
Los Angeles	3.77	4.93
Washington, D.C.	3.61	1.82
Detroit	2.97	2.20
Houston	2.47	1.43
Memphis	2.33	0.76

Those are but a few of the ways in which the marketer can convert the informational power of the *Survey* to potent results in the sales- and profit-building areas. The decisions that lead to healthy sales and profits are always fraught with uncertainties, but by making use of the local market distinctions provided by the *Survey* the marketer can reduce the area of the unknown and make his future manageable. ■

Survey of Buying Power

The following corrections should be entered in your copy of the *Survey of Buying Power*.

Page

A-10 SURVEY HIGHLIGHT
The Southeast's retail sales total is $177,411 million.

A-20 SURVEY HIGHLIGHT
The Dist. of Columbia's population declined 10.5% in the 1970-78 period.

B-5 Florida's EBI total is $55,158,298,000; per capita EBI, $6,256; and average household EBI, $16,393. U.S.'s EBI total is $1,439,815,449,000; per capita EBI is $6,550; and average household EBI, $18,718. Market Statistics, which prepares the *Survey* data, had not computed by press time the changes in median household EBI and the households by EBI group for Florida and the U.S. Call Market Statistics for further details (212-986-4800).

C-52 Hendry County—The total EBI is $81,510,000; median household EBI, $11,826; and distribution of household EBI groups as follows: A, 9.1%; B, 22.4%; C, 24.4%; and D, 11.9%. The Buying Power Index (BPI) is .0065. Because EBI is the most important BPI component, these changes affect other counties and states too numerous to mention here. Call Market Statistics for further details (212-986-4800).

SPECIAL REPORT PREVIEW

MARKETING IN THE 1980s

Are sales and marketing executives prepared to give women and blacks a bigger role in tomorrow's sales force? That's the question marketers will confront in the 1980s as a result of a dramatic shift in age demographics. The number of 16–24 year olds in the labor force—the age group that is the source of sales and management trainees—will shrink more than 2 million, from 24.5 million in 1978 to 22.4 million by 1990.

While the number of men will plunge almost 2 million, the number of women will decline less than 100,000. As a result, women will actually outnumber men in that critical age group by the time 1990 rolls around. Equally important, the number of young black adults will more than double to 3 million.

Plainly, then, marketers will have to step up recruitment of women and blacks if they hope to expand their field forces to keep sales volume climbing. That will require significant changes in hiring practices, training techniques, and career development programs, all of which have been oriented to white males until now.

That is but one of the critical opportunities and challenges that marketers will face in the changing market environment of the 1980s. S&MM will explore these changes, and their implications, in a Special Report included in our Dec. 10 issue.

Behind S&MM's population projections

The methodology behind the *Survey of Buying Power*'s five-year population projections is explained in this way by Elias Fokas, vice president, Market Statistics, the Bill Communications subsidiary that prepares the *Survey* data.

Population change occurs in two ways: natural increase, the difference between births and deaths, and migration, the net result of in-and-out movement of people to and from a specific locale.

The first step in estimating natural increase is projecting the number of births, which we base on fertility estimates for each county. Our 1978 county-level fertility rates, which consist of the number of live births per 1,000 women 15–44 years old, are based on our county-level birth data and our age-sex estimates of each county's population.

We project expected fertility rates at the national level through a regression equation that considers rate changes of the last 10 years and gives more weight to those of recent years. Since the fertility rate depends on socioeconomic factors that affect every area in the U.S. to a similar degree, we adjust the county's expected fertility rate to reflect national trends. That gives us projected fertility rates for 1983 for every county. Those rates differ in absolute terms from county to county, but they follow the national rate trend. Once those rates are determined, we apply them to the expected number of females 15–44 years old in the county for each year up to and including 1983. That gives us the projected number of births.

Next, we project the number of deaths in each county. Those rates have been constant in the last decade, which makes them comparatively easy to predict. The projected number of deaths are deducted from the projected number of births to give us the numerical natural increase.

The second major population factor, net migration, is influenced by such things as job opportunities, presence of colleges or military barracks, and resort areas for retirees. Starting with the 1970 Census of Population and Housing, we have measured those changes each year and are able to make projections of net migration for each county based on those data.

In our final step, we take the net population change and add it to current county population estimates. That results in our first county projection estimates. We then examine our county estimates to make sure that their sums agree with our state control totals, which are arrived at by a similar process.

Household projections are based on trends in household size changes at the county level from year to year. Those trends are determined from the Census Bureau's *Current Population Survey Series* that provides estimates at the state and national levels. We also use the Bureau's one-time *Survey of Income and Education*, which provides valuable information at the metropolitan area level. After analyzing these two sources,we project the average household size for each county through 1983. By dividing household size into population, we arrive at the projected number of households. S&MM

Behind S&MM's EBI projections

The methodology behind the *Survey of Buying Power*'s five-year Effective Buying Income (EBI) projections is explained below by Robert Katz, manager of statistical services at Market Statistics, the Bill Communications research subsidiary that prepares the *Survey* data.

Development of our five-year EBI projections is intimately related to the manner in which we prepare the *current year* estimates for the *Survey of Buying Power* (S&MM, July 23). EBI is roughly equivalent to the federal government's disposable personal income (DPI) series wfth one important exception. We remove from the

Announcing the first application of the Assessment Center Method to selection interviewing...

Targeted Selection®

A totally new, legally defensible approach to selection interviewing!

- Targeted Selection is designed to build managers' interviewing skills and improve hiring accuracy for salespeople, professionals, and management trainees, thus reducing turnover and training costs.
- Targeted Selection trains management personnel how to use assessment center technology to interview and evaluate applicants in a manner which produces factual, job-related data with which to make accurate selection decisions. Targeted Selection is a three day program designed to be run in-house by your organization's instructors.
- Targeted Selection organizes all elements of the selection process into an efficient, consistent system which is fair to applicants and more legally defensible than traditional methods.

DIRECT MARKETING
Radnor, Pa. 19089

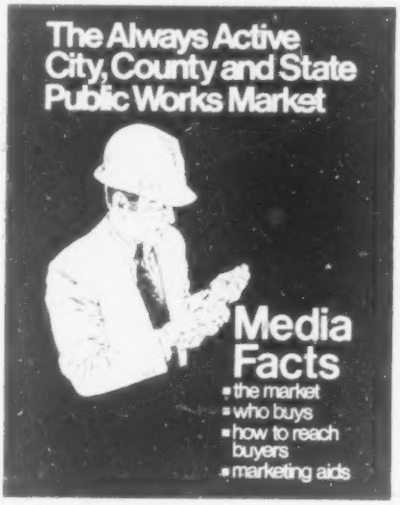
DPI total the income earned by Americans permanently stationed abroad, such as diplomatic and armed forces personnel and business persons.

Each year, we get from the individual state-employment agencies information on total wages and salaries and nonagricultural employment for each county in their jurisdiction. Based upon our own analysis, the year-to-year change in these totals has proven to have a high correlation with the annual change in the average EBI per household at the county level.

Since 1970, we have also purchased each year from the Bureau of Economic Analysis (BEA) a computer tape with total (pretax) personal income, population (derived from the Census Bureau's P-25 series), and per capita income for all the counties in the U.S. We compare the year-to-year change shown in the BEA's data with the annual changes in our own per capita EBI for each county, making allowance for the income tax rates of the individual states. Where there is a significant difference in the percentage changes between the two series, we re-examine our EBI data to determine if any adjustment should be made.

With this information in hand, we develop our five-year projections in two major steps. First, we determine what the number of households will be in each county five years from now. (For an explanation of this procedure, see the article on population projections, page 22.) The increase or decrease in the number of households is a critical factor because, obviously, such change represents a potential gain or loss in total EBI. Here, we generally make the assumption, except in special cases, that the average income of those leaving or entering the county in the forecast period will be comparable to that of those presently living there. The special cases arise when our records indicate that a county has been either at-

free marketing and sales guide



The mandate from the American people for a cleaner environment and a better standard of living has created a city, county, and state public works market that is big, steady and continually growing.

Annual expenditures are in the billions.

Purchases include equipment, material and supplies for the design, construction, operation and maintenance of:

- streets and highways
- wastewater
- solid waste
- water works
- recreation

Free guide explains the market, shows how to reach and influence buyers/specifiers, and outline aids that help make sales.

© Sales & Marketing Management

Merchandise line sales are one of the most underutilized tools for ascertaining the differences in consumer spending patterns that underlie the formulation of local-market sales strategies. For example, food marketers should note that households in the west north central states spend the least on groceries because of the home-grown produce consumed by farm families; appliance makers will note that the same households spend proportionately more on their products. Makers of jogging equipment will be heartened that, in contrast to the national pattern, consumers in New England and the Middle Atlantic and Pacific regions spend more on footwear than on appliances. With these regional differences in mind, the marketer is in a stronger position to decide if selling emphasis should be placed on markets where below-average spending suggests insufficient use of his product or on a region where above-average outlays suggest opportunities for additional business.

Population projections are always a tricky proposition because people have a tendency to disregard the paths laid out for them by the forecasters. In recent years, the situation has been complicated because the ebb and flow of population between markets, always the hardest trend to project, has become the critical linchpin of metropolitan growth and decline.

Of course, the most important forecast is the numerical movement up or down of a market. Here, the "Survey" correctly predicted four of the nine markets that had losses in the 1973–78 period. In three other markets where the "Survey" expected gains, the reverse occurred. The "Survey" was exactly on target for Philadelphia; within one percentage point of the actual results in five additional markets; and within two points in four metro areas. On average, the "Survey" projections differed by 4.16 points from the actual results, mostly caused by a serious underestimation of growth in the South and West.

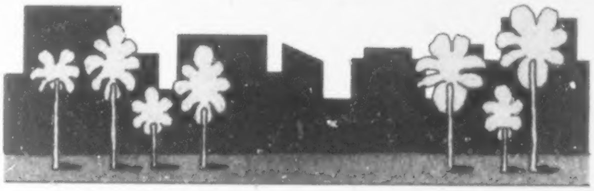
Sales & Marketing Management

tracting or losing households whose incomes are significantly higher or lower than its overall average.

The second major step involves making projections of the future rates of inflation and real gross national product (GNP). Here, we rely on deflators that the BEA has developed for DPI and total retail sales. Projecting future economic growth for the 1978–83 period gives us a handle on what the total EBI will be in 1983. In turn, projecting the inflation rate enables us to express our 1983 EBI data in terms of current dollars.

To develop our 1983 EBI totals for each county, we combine the above estimates with both our households projections and our average EBI per household projections. The latter are derived from projections of what has happened in each county between 1970 and 1978, with the greatest weight given to the rate of change in the most recent years. S&MM

Put your selling power where there's BIG BUYING POWER



Marketers are assured of sales success in the St. Petersburg - Tampa* Metro area where effective buying power reached a record of $8.9 billion in 1978, up $1.0 billion over the preceding year**

To position yourself ahead of the competition in this lucrative marketplace, get the unequaled selling power of The St. Petersburg Times and Evening Independent. Combined they have a greater household reach than any other print or broadcast media on Florida's Gulf Coast. Big business begins with a call to a Times or Independent sales representative.

Behind S&MM's retail sales projections

The methodology for the *Survey of Buying Power's* five-year retail sales projections is explained by Robert Katz, manager of statistical services at Market Statistics, the Bill Communications research subsidiary that prepares the *Survey* data:

The starting point of our Total Retail Sales (TRS) estimates is the Census Bureau's 1972 Census of Retail Trade (very little data have been released from the 1977 census as yet). To track what has happened in each county since 1972, we rely principally upon two sources:

1. The sales-tax data we receive from more that 40 states.
2. The Census Bureau's annual *County Business Patterns* (CBP) series of state reports that include employment and payroll data for all the retail store types.

By analyzing the year-to-year changes in the sales-tax data, on the one hand, and the number of retail store outlets and number of employees for each type of store, on the other hand, we get an accurate fix on what happens to the TRS from one year to the next. The CBP information is especially helpful in filling the gaps created by the states that do not cooperate in releasing their tax data. Although the CBP reports have a two-year lag, we can adjust for this by matching their information to the Census Bureau's *Monthly Retail Trade Report*. That report now has data for 19 states and 28 of the biggest metropolitan markets.

In projecting the TRS, on a county-by-county basis, to 1983, we rely primarily on two important variables:

◆ **TRS as a share of Effective Buying Income (EBI).** Because a county's EBI, obviously, has an important correlation to what its population can spend in retail stores, we have established for each county back to 1972 its TRS expressed as a share of EBI. When analyzed over a period of time, this ratio provides a reliable picture of how people in different counties spend their income. While the bulk of the counties cluster around an average ratio, we look for those areas where the ratio is significantly above or below average.

◆ **Per capita sales,** which enables us to relate the TRS to population change. This variable is helpful in analyzing counties where population and retail sales are moving in different directions or at different rates.

In the final step of our calculations, we project the county's trendline TRS-share-of-EBI to 1983 and multiply it by the total EBI we have projected for the county. Similarly, we project the trendline per capita TRS to 1983 and multiply it by our projected population. We then take the two different sets of projections, assign them different weights based upon the county's recent behavior patterns, and compute a total retail sales figure for that county. S&MM

WE HAVE A BRAND NEW CONVENTION CENTER FOR WORKING.

AND ALL THIS FOR PLAYING:

A world famous spa
5 golf courses
A private ocean beach
37 tennis courts

They're all exclusively for your group of 200 or less. Because only one group meets at Palm-Aire at a time, regardless of the size. Over 15,000 square feet of meeting space waits for people who expect luxury. Even during meetings.

We have a full range of convention centers, seminar rooms and meeting suites. Each equipped with the newest acoustical and lighting systems. The finest personalized service for large groups or small.

When you're not meeting at the conference table, meet on one of our five golf courses. By the swimming pool closest to your room. Or at one of our four fine restaurants with four different atmospheres and menus.

Find out how to motivate your people. Call Saul Chato, Vice President, Hotel Sales & Marketing, toll-free at (800) 327-4960. From Canada or Florida call (305) 972-3300, collect.

The World of Palm-Aire

Department 21560
2501 Palm Aire Drive North,
Pompano Beach, Fla. 33060

We've made The World a better place to live. FPA Corporation.

Explanation of 'split' counties in S&MM's TV markets

Although as a general rule each county is assigned exclusively to one Area of Dominant Influence (ADI), 11 counties are split between different TV markets because their large size causes different portions to be dominated by different sets of TV stations. Here is a list of the split counties, the ADIs to which their geographic portions are allocated, and the relative share of population in each portion.

County	ADI/TV Market	% Pop.

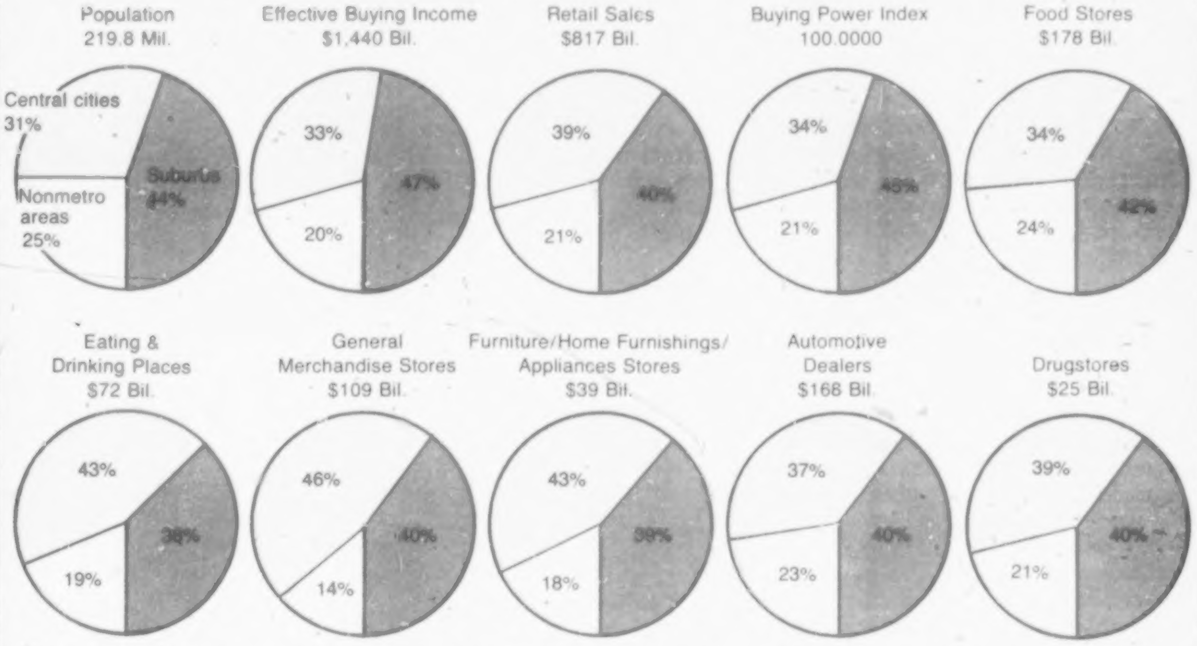
S&MM MARKETGRAPH

Suburbs: A lucrative (but not always happy) Eden

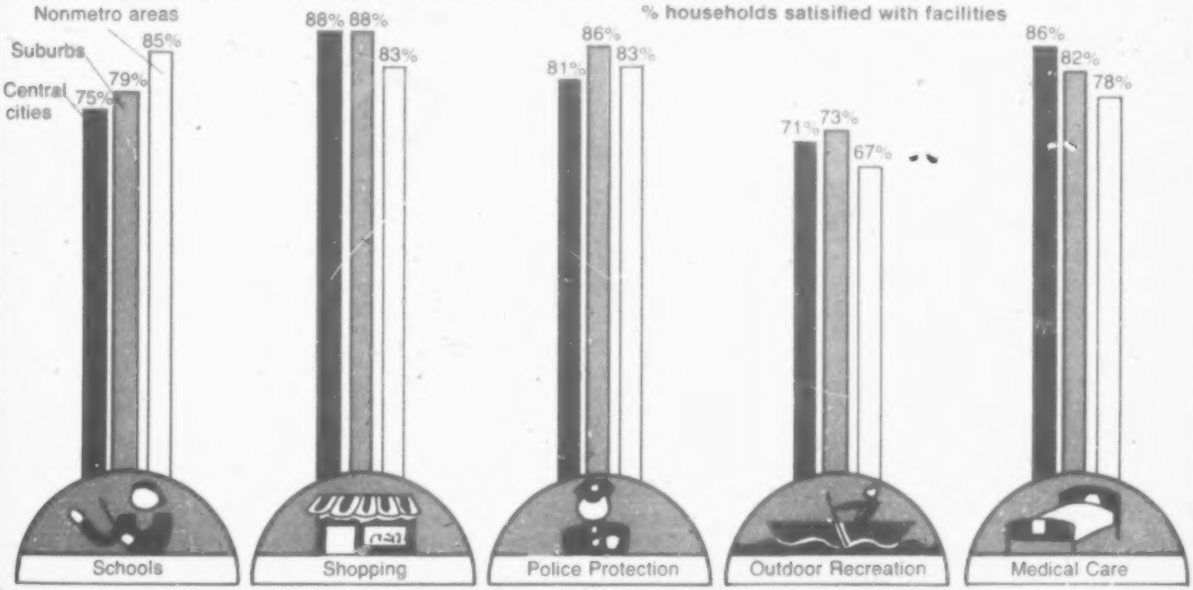
Just as the federal government reshuffles its construction subsidies to crimp the building of future shopping centers, the suburbs have passed the central cities in retail store sales for the first time. Yet while the suburbs are now the most important retailing locale, their residents are not completely happy with their lot: they enjoy a lead in only two of five "quality of life" indicators.

By most sales indicators, the suburbs are No. 1 . . .



Source: Market Statistics, research subsidiary of Bill Communications that prepares *Survey* data.

. . . but suburbanites have reservations about their 'quality of life'



Source: Bureau of Census and U.S. Dept. of Housing and Urban Development, *1977 Annual Housing Survey: Indicators of Housing and Neighborhood Quality*, Series H-150-77, Part B.

Now...target the older adult market through publications which serve them best...

Up to 506,200 circulation
Cost per thousand as low as $13.89*
Message flexibility–Select the markets you want

You can reach, inform and motivate the affluent and active older adult (55-plus age group) market through the publications which provide them the news and information they really need and want—their locally-published senior citizen newspapers and magazines.

Professionally-published and with local reporting staffs, each publication is part of its senior community. Many also carry the exclusive national news and features of the Senior News Service. Each publication brings to its readership more news and information serving the specific needs and interests of senior citizens than any combination of other publications in their geographic areas.

And, now, you can advertise directly to this prime older adult market in the geographic markets you choose through the Senior Publishers Group, advertising sales representatives. We offer your choice of 22 publications in California, Arizona, Oregon, Colorado, Illinois, Georgia, North Carolina, the Eastern Seaboard and all New England States. And, more markets and publications are being added actively. Take one or the total circulation of 506,200 and get results.

Call collect today to Len Hansen, sales director, to receive our market and presentation materials.

Senior Publishers Group
A service and subsidiary of Senior World Publications, Inc.
4640 Jewell Street, San Diego, California 92109
(714) 270-9082

Put these facts to work in making your decision to target the older adult market:

"The older (55-plus) consumer commands four times more buying power than the teenage market. They have more disposable income, greater liquid assets, and less debt than any other age group. This group represents more than 56% of the total wealth of the United States. Half this total is among the 65 and over age group."

—Gerontological Planning Associates
Santa Monica, California–1979

"Nearly 80 percent of savings dollars in S&L's is owned by the 55-plus age group. Their average balance is over $5,000."

—National Savings and Loan League
Reported in S&MM, 1979

"Households headed by the 55-plus age group have twice the discretionary spending ability—$3 out of every $10—than the 35-and-younger group ($1.50 out of every $10)."

—U.S. Department of Commerce, 1978

---

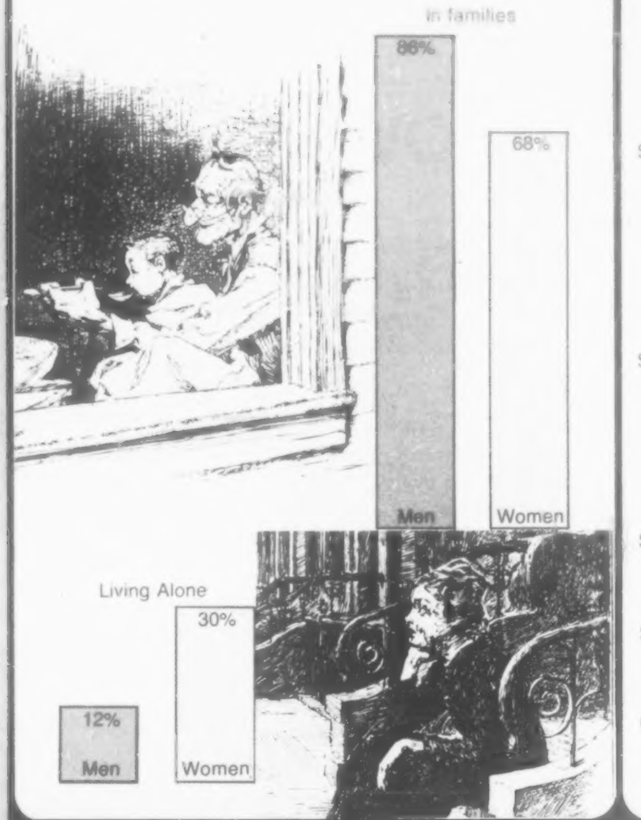
*Cost per thousand computed on full page, one-time, black and white rate for Senior World, San Diego. Total group CPM is $23.17.

S&MM MARKETGRAPH

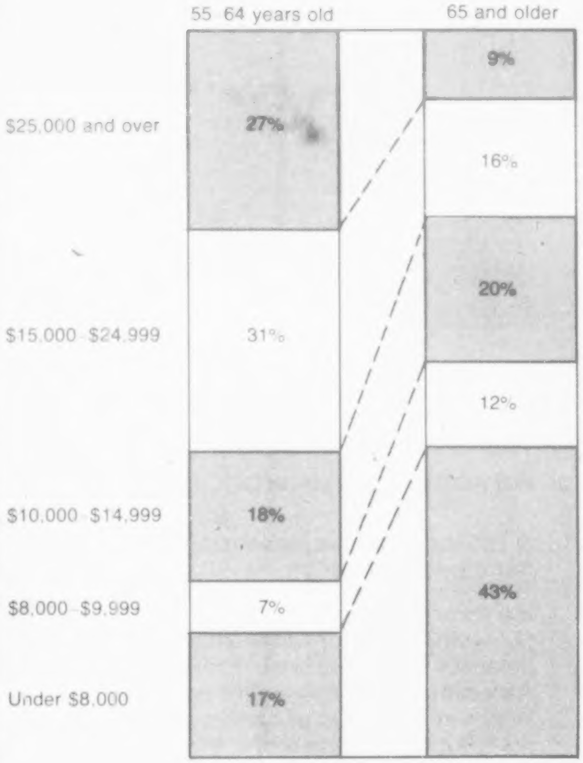
Surprises in the over-55 market

Shaping up as the second-fastest-growing age group in the next decade, the over-55 population packs a potent appeal to marketers looking for rapid growth. The market has certain nuances, however. As the graphs below indicate, (1) there is a higher proportion of men than women living in families and (2) the income mix changes dramatically after retirement. Also, despite the popular image of the elderly basking in sun-blessed states, a large number still live in the North.

% of population 55 and older



Income group by age of family head



Top 10 states for people 50 and older

Another reason why Hardware Retailing is your best space buy . . . the "People Power" of the Association.

HARDWARE RETAILING puts the "People Power" of the Association to work for you.

A hotline to the people who influence hardlines distribution.

Hardware Retailing isn't just another publication. It's an **Association** publication, the voice of the National Retail Hardware Association and the Home Center Institute. We're at the center of hardlines sales and distribution in the country. Member retailers — the big hitters in the hardware/home center field — are the people you want to sell.

More than just a "Number 1" book. We offer you a full range of services.

We're the preferred book for both readers and advertisers because we're number one in circulation, editorial, readership and now total advertising pages. But there's more to our success. We put our "People Power" to work for you.

Do you need help bringing a product to market? Or in developing or expanding distribution? Do you need feedback on what's really happening in the hardware/home center industry? If you do, then turn to us. We can help with marketing and merchandising, with shows and research, because we have the resources of the entire **National Retail Hardware Association** to draw upon.

HARDWARE RETAILING. The "People Power" of the Association makes us your best space buy in hardlines advertising.

Merchandise Line Sales data pertain to the total sales of a product category by the various retail-store types handling that category in the market. That is, if the dollar sales of "groceries and other foods" in food stores, restaurants, department-store lunch counters, snack bars, vending machines, etc., are aggregated, the result would be the merchandise line sales for that category. Hence, merchandise line sales should not be confused with retail store sales, which pertain to the business volume of a type of retail outlet, such as a food store. A food store, of course, sells many more types of merchandise than just food products.

Updated from the 1972 Census of Retail Trade, the merchandise line sales data shown in this section refer to seven broad product groups, such as groceries and other food products, footwear, and drugs and other health aids. Merchandise line totals give a more realistic estimate of a particular product's market potential than is provided by the store-type sales associated with the product.

1 Groceries and other foods includes meat, fish, and poultry; produce; frozen foods; dairy products; bakery products, except frozen; and all other foods.
(Note: Meals, snacks, alcoholic drinks, packaged alcoholic beverages, and tobacco products not included.)

2 To enhance the usefulness of the merchandise line totals, the *Survey of Buying Power* shows for each product category the dollar sales accounted for by the dominant store type associated with the product classification. That makes the data helpful in analyzing distribution channels in a market. The dominant store types, and their related merchandise line category, shown in the tables are: food stores for groceries and other foods; drugstores for drugs and other health aids; department stores for women's and girls' clothing; apparel stores for men's and boys' clothing; apparel stores for footwear; furniture/home furnishings/appliance stores for major household appliances; and furniture/home furnishings/appliance stores for furniture and sleep equipment.

3 Drugs and other health aids includes prescriptions; nonprescription medicines; and other health aids.

4 Women's and girls' clothing includes infants' and toddlers' apparel and accessories; young girls' and subteen clothing and accessories; women's, misses', juniors' furs and fur garments; women's, misses', juniors' dresses; women's, misses', juniors' coats, suits, jackets, and rainwear; women's, misses', juniors' sportswear; women's hosiery; women's bras, girdles, and daytime lingerie; women's sleepwear and robes; women's handbags; women's hats, hairpieces, and trimmings; women's gloves; and all other women's apparel and accessories.

5 Men's and boys' clothing includes boys', young men's, and "student" clothing and accessories; men's overcoats, topcoats, raincoats, suits, and formal wear; men's sport and casual outerwear; men's uniform and work clothing; men's sport and dress shirts; men's sweaters, hosiery, pajamas, robes, and underwear; men's sport and playwear; and other men's apparel and furnishings.

6 Footwear includes men's and boys' footwear; women's and girls' footwear; and children's footwear.
(Note: Infants' and toddlers' footwear not included.)

7 Major household appliances includes such items as vacuum cleaners, sewing machines, refrigerators, freezers, dehumidifiers, air conditioners, dishwashers, clothes washers and dryers, stoves and ovens, trash compactors, and disposal units.

8 Furniture and sleep equipment includes living room, dining room, and bedroom furniture; sleep furniture and equipment; and all other furniture including outdoor and office furniture.

If the *Survey of Buying Power* is important to your work, you owe it
to yourself to see and evaluate the new 1979 *Survey of Buying Power*
DATA SERVICE. For more information, see the brochure in this magazine.

EASTERN HAS A NEW SET OF DIRECTIONS FOR A BETTER MEETING.

EASTERN AIRLINES' CITIES
MONTREAL

EASTERN'S EXPANDED ROUTE SYSTEM CAN TAKE YOU TO MORE MEETING SITES.

When the search is on for the perfect meeting place, you can save yourself some headaches by contacting Eastern. We've got more choice spots than you can shake a gavel at.

We recently increased our service to the resort cities and convention capitals that are famous for successful meetings. And we go the distance to make sure your meeting comes off first rate. From San Juan to Seattle. Montreal to Mexico City. And all the Eastern cities in between.

FROM THE SUNNY SHORES OF FLORIDA, TO THE ISLANDS IN THE CARIBBEAN.

You say you'd like to gather your troops in Florida? Or hop down to San Juan, Barbados, or some other island in the stream? Fine. We can start plotting and planning for you. In over 100 cities, 14 countries, and the world's only Magic Kingdom…Walt Disney World in Florida.

EASTERN HELPS YOU GET YOUR MEETING OFF THE GROUND.

Eastern does more than fly your people from coast to coast, hinterland to island. We make all travel arrangements. Make sure you get the best fare. Line up rental cars or ground transportation.

With Eastern, a group travel planner will meet you beforehand to discuss site selections. Offer ideas on promotions. Map out itineraries. Then we'll profile your particular needs and give you a toll free number so all your members can stay posted.

So this time around put the aggravation of planning a meeting to rest. With Eastern your meeting or convention comes made to order.

For more information, call your local Eastern Sales Office, or mail the coupon below.

Market Statistics, producers of Sales and Marketing Management's annual **Survey of Buying Power** and **Data Service**, is a Census Summary Tape Processing Center. What does this mean to you?

—A single source will supply you with tract, MCD, Zip, County, Metro, State, and National data, both for the 1980 Census and updates for these small areas for successive years. You can now plan strategies which can be implemented in intercensal years.

—Two types of data services are available. A Census data base of selected economic and demographic characteristics, at the local level, available in machine readable or printed form and, a custom data service allowing you to design your own files.

—Twenty-nine years of experience in generating and presenting demographic data assure you of reliable service. Full compatability on all geographic levels, with our Survey of Buying Power estimates will permit you to plan in a consistent manner throughout the 1980's.

While it's too soon to decide on specific data needs it's not too soon to begin planning for the 1980 Census and beyond. Just return our business reply card and we'll keep you informed about the availability and status of Census data and updated demographic statistics.

Guide to using S&MM'S U.S. METROPOLITAN AREA PROJECTIONS

S&MM ESTIMATES	POPULATION					EFFECTIVE BUYING INCOME				RETAIL SALES				BUYING POWER INDEX	
STATE S&MM METRO AREA County	12/31/78 Total Pop (Thous.)	12/31/83 Total Pop (Thous.)	% Change 1978–1983	12/31/83 Total Households (Thous.)	% Change 1978–1983	1983 Total EBI ($000)	% Change 1978–1983	Average Household EBI 1978	1983	1983 Total Retail Sales ($000)	% Change 1978–1983	Retail Sales Per Household 1978	1983	1978	1983
	1		2	3	4	5	6	7		8	9	10		11	

1 Updated from the 1970 Census of Population and Housing, and incorporating the annual tabulations of the Federal-State Cooperative Program for Population Estimates, **Total Population** is a head-count estimate of all **persons** living in the metropolitan market at the end of the year. It includes persons living in colleges and hospitals, and armed forces personnel (and their dependents) permanently assigned to the area, but excludes tourists and transients. The **projected 1983 population** is based upon expected trends in births, deaths, outmigration, and inmigration. An explanation of the methodology behind S&MM's population projections will be found on page 22.

2 Percent change between 12/31/78 and 12/31/83, with 1978 as the base year. A minus sign indicates a decline.

3 Households are units made up of families or unrelated individuals occupying a house, apartment or other group of rooms, or a room regarded as a housing unit under the rules of the 1970 Census of Population and Housing. The members of a household need not be related, and a single person living alone in a housing unit is also counted as a household. The projection is based upon population trends that will affect household size.

4 Percent change between 12/31/78 and 12/31/83 with 1978 as the base year. A minus sign indicates a decline.

5 Effective Buying Income (EBI), a classification developed exclusively by Sales & Marketing Management, is personal income less personal tax and nontax payments. Personal income is the aggregate of wages and salaries, other labor income (such as employer contributions to private pension funds), proprietors' income, rental income (which includes imputed rental income of owner-occupants of nonfarm dwellings), dividends paid by corporations, personal interest income from all sources, and transfer payments (such as pensions and welfare assistance). Deducted from this total are personal taxes (federal, state, and local), nontax payments (such as fines, fees, penalties), and personal contributions for social insurance. The resultant figure is commonly known as "disposable personal income." Market Statistics, the research division of Bill Communications that prepares the *Survey* data, removes from this figure compensation paid to military, diplomatic, and business personnel stationed overseas to arrive at Effective Buying Income. An explanation of the methodology behind S&MM's EBI projection will be found on page 23.

6 Percent change between 1978 and 1983, with 1978 as the base year, of a market's total EBI. A minus sign indicates a decline in EBI.

7 Average Household Effective Buying Income (EBI) is calculated by dividing the number of households into total EBI. Often used as an indicator of market quality, but can be misleading where there is a disproportionate share of institutional population (for example, students or armed forces) in quarters not considered households. Because their income is included in the total EBI, an average EBI per household could be deceptively higher than the average of the actual household population in the area.

8 Total retail sales are net sales (minus refunds and allowances for returns) of establishments engaged primarily in retail trade. Sales taxes collected from the customer and receipts from repairs and other services are also included. On the other hand, retail sales by such nonretailers as wholesalers and service establishments are not counted. Although retail sales are often used to gauge the purchasing power of the residents in a market, they are only an approximation because the market's volume may be affected by the movement of shoppers to and from adjacent areas as well as by the purchases by nonhousehold units such as businesses and by inhabitants of group quarters. An explanation of the methodology behind S&MM's retail sales projections will be found on page 27.

9 Percent change between 1978 and 1983, with 1978 as the base year, of a market's total retail sales. A minus sign indicates a decline in retail sales.

10 Retail Sales Per Household is a mathematical average calculated by dividing the market's total households into total retail sales. However, it should be used with caution because retail sales can include purchases by nonhousehold units within the market (such as businesses and residents of group quarters) as well as by households not domiciled within the market.

11 Buying Power Index (BPI) is a weighted index that converts three basic elements—population, EBI, and retail sales—into a measurement of a market's ability to buy, and expresses it as a percentage of the U.S. potential. It is calculated by giving a weight of 5 to the market's share of total U.S. EBI, 3 to its share of total U.S. retail sales, and 2 to its share of total U.S. population. The total of those weighted percents is then divided by 10 to arrive at the BPI. However, depending upon what your research has revealed about buyers of your products, you can construct your own customized BPI by using any of the factors contained in the tables and assigning to them what you think are relevant weights.

If the *Survey of Buying Power* is important to your work, you owe it
to yourself to see and evaluate the new 1979 *Survey of Buying Power*
DATA SERVICE. For more information, see the brochure in this magazine.

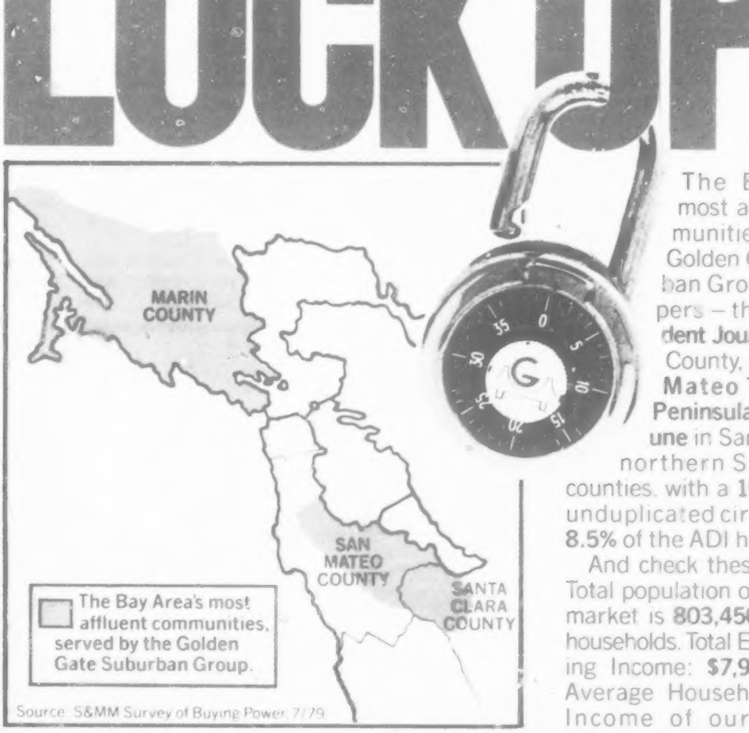
LOCK UP NORTHERN CALIFORNIA'S MOST AFFLUENT MARKET



▨ The Bay Area's most affluent communities, served by the Golden Gate Suburban Group.

Source: S&MM Survey of Buying Power, 7/79

The Bay Area's most affluent communities read the Golden Gate Suburban Group newspapers – the **Independent Journal** in Marin County, and the **San Mateo Times** and **Peninsula Times Tribune** in San Mateo and northern Santa Clara counties, with a **153,169** total unduplicated circulation . . . **8.5%** of the ADI homes.

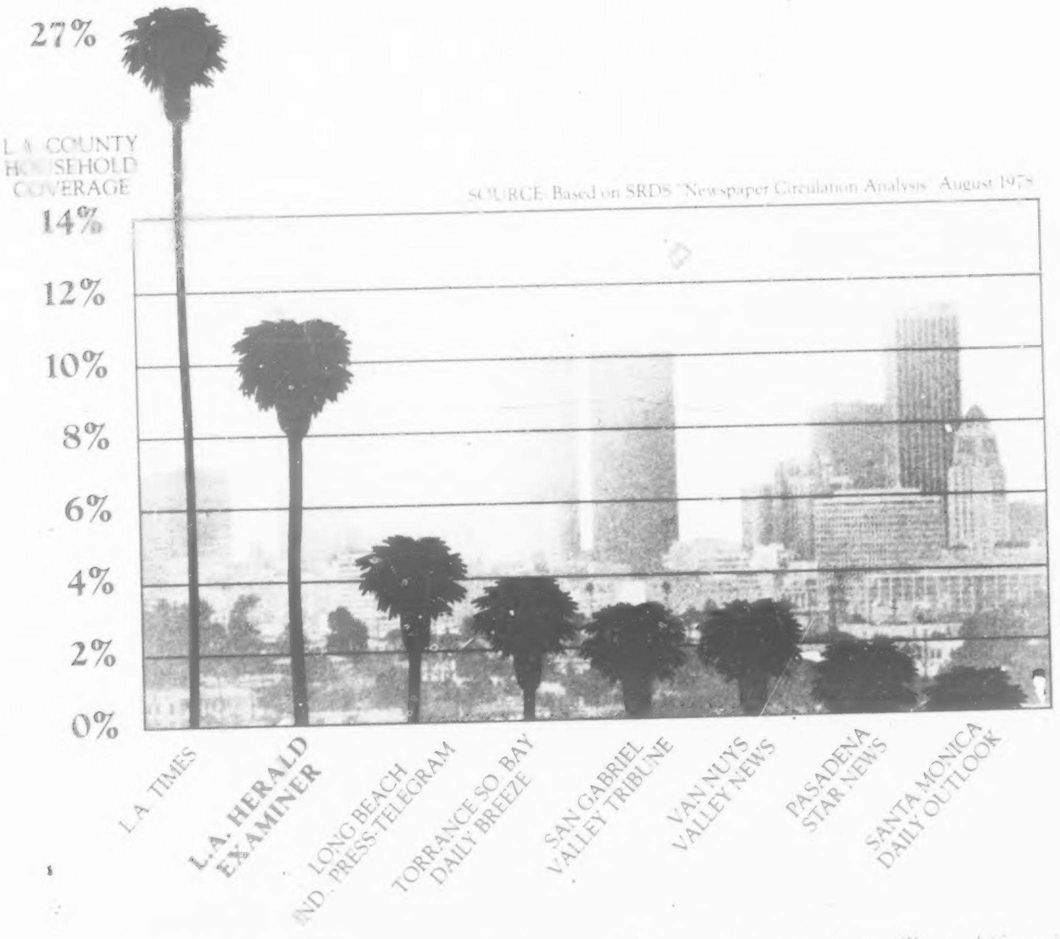
And check these numbers: Total population of the GGSG market is **803,450** . . . **298,250** households. Total Effective Buying Income: **$7,933,450,000.** Average Household Buying Income of our readers: **$26,600.** We've got **16.8%** of the San Francisco-Oakland-San Jose Consolidated Metro Area's population . . . but nearly **20%** of the Bay Area's total buying power. And **45.5%** of the Consolidated Metro Area's 1978 retail sales took place in the GGSG counties.

We have the Bay Area's most affluent communities locked up. Pick the Golden Gate Suburban Group, and put your own lock on Northern California's most affluent market.

GOLDEN GATE SUBURBAN GROUP

[illegible] Marshall St., Redwood City, CA 94063
(415) 365-3111
Represented by California Newspaper Markets Inc. and Western Dailies in New York, Chicago and Detroit.

TO COVER THE NATION'S SECOND LARGEST MARKET YOU NEED ITS SECOND LARGEST PAPER.



SOURCE: Based on SRDS "Newspaper Circulation Analysis" August 1978

This year, Los Angeles County's retail sales jumped 11% to $30 billion. This puts Los Angeles in front of New York. And right behind Chicago, as the second largest market in the country.

As you can see, Los Angeles has a lot of money to spend. And everyday the Herald Examiner reaches nearly 700,000 of the people who spend it. People you'll need if you're planning a 50-60% household coverage goal.

So if you want to effectively cover the nation's second largest retail market, don't overlook its second largest paper. The Los Angeles Herald Examiner. Without it, your coverage won't be complete.

THE LOS ANGELES
HERALD EXAMINER

To Reach The Rich Center of Florida's Gold Coast:

FORT LAUDERDALE NEWS/SUN-SENTINEL ARE USED MORE BY RETAIL ADVERTISERS THAN ANY OTHER GOLD COAST COMBO!

In 1978, retail sales on Florida's Gold Coast encompassing Broward, Palm Beach and Dade Counties (nation's 7th largest retail sales market), reached $18.4 Billion.[1] Of that amount, $6.7 Billion were generated in the Fort Lauderdale News/Sun-Sentinel market (Broward, S. Palm Beach Counties) during 1978.[1]

Reaching and Selling this fastest-growing, most affluent center of Florida's Gold Coast is essential to retail advertisers. That's essentially why their preference is for South Florida's #1 Combo . . .

FORT LAUDERDALE NEWS/SUN-SENTINEL:

- Carried 40% of the 191.5 million lines of total retail advertising on Florida's Gold Coast.[2]
- Provide combined reach of 60% of adults making this combo the most effective advertising buy in the Gold Coast's rich middle (the Miami Herald reaches only 22% of adults[3]).
- Largest circulation gain in Florida—up 14,562 over 1978.[4]

WHY IS THE NATION'S 13th METROPOLITAN MARKET LUCKY FOR YOU?

In the 13th largest Metropolitan Consolidated Market of South Florida, The Miami Herald/Miami News provides 70% of the newspaper circulation. A market of nearly two and a half million population and an effective buying income of almost $16 billion annually. And it's the fastest growing Metropolitan market in the United States.

HOW TO GO DEEP IN THE HEART OF DIXIE.

If you want to reach the hub of the South, talk to Atlanta. And do it through The Atlanta Journal and The Constitution. Our marketing department can give you up-to-date facts on the entire market. Facts like:

- 1,008,000 Metro Atlanta adults read these newspapers during an average week.
- 18th largest SMSA in the country.
- Retail sales in Atlanta have doubled since 1970.
- 430 of the FORTUNE 500 top industrial firms in the U.S. have operations in Atlanta.
- Manufacturing accounts for 16% of total employment.
- 75 banks with over 400 branches with a total resource of $8.8 billion. Ninth in the nation in bank clearings.

Give us your target audience, and we'll show you how to reach it. Contact Caroline John at (404) 572-5283. Source: Market Opinion Research Audience and Shopping Study, 1977-78.

Basic Buy in . . .

Central Illinois

The Central Illinois Unit is the #1 buy in Illinois after Chicago. Our contiguous 3-county/dual metro areas, plus 16 separate urban market places in the coverage area, accent our unified 13-county market. Efficiently packaged at a unit price lower than individual costs, CIU gives a combined circulation of 124,898 and 62% coverage of 209,700 households.

- E.B.I. 24% GREATER THAN PEORIA
- FOOD SALES 31% GREATER THAN PEORIA
- POPULATION 32% GREATER THAN PEORIA

71% A.D.I. PENETRATION

THE #1 MARKET BUY IN ILLINOIS AFTER CHICAGO
Central Illinois Unit
REPRESENTED BY BRANHAM NEWSPAPERS

For reaching your target market in Chicago, the Tribune overshadows any magazine.

Chicago Tribune
Muzorewa elected Rhodesia premier
$161-million facelift on Eisenhower X-way
Local VA chief wins back job
Cash short for other projects

Name your target. We'll show you research that proves the Chicago Tribune reaches considerably more of your prospects in the Chicago ADI than any magazine. Examples:

Adults with household incomes of $50,000 or more. The Tribune reaches 88.3% of them. Time 40.6%. Newsweek 26.8%. Wall Street Journal 23.2%. U.S. News and World Report 15.2%.

Females who spend $60 or more per week on groceries. Tribune 68.1%. Family Circle 35.9%. Better Homes & Gardens 31.8%. Woman's Day 37.5%. Good Housekeeping 32.7%.

Males 18 to 49 with household incomes of $25,000 or more. Tribune 77.5%. Esquire 7.1%. Playboy 44.5%. Sports Illustrated 35.2%. Outdoor Life 8.3%.

Females 18 to 34 with household incomes of $25,000 or more. Tribune 79.9%. Family Circle 37.4%. Better Homes & Gardens 50.8%. Woman's Day 56.3%. Good Housekeeping 44.2%.

Ask us for recommendations on which of our special interest sections will do the best job for you. We also have data on the lifestyle patterns and leisure interests of our readers . . . even details on special frequency discounts. Just phone David Ferm in New York at (212) 682-3033, or Vince Riordan in Chicago at (312) 222-3250.

What have we got against their news?

I Love Lucy, Dick Van Dyke, Sanford & Son, Sha-Na-Na, The Joker's Wild, $100,000 Name That Tune —that's what! While the other Sioux City stations program local news, KMEG-TV supplies the entertainment alternative. KMEG-TV programs a top-notch entertainment line-up that's attracting more of the market's viewers than ever before plus News and Weather Updates 44 times weekly. If you thought your choice was limited to news or more news, think again! KMEG-TV provides a choice, a real alternative to the other stations' news.

Look at WKZO—the big buy for radio in Western Michigan

The WKZO Kalamazoo market is 12 counties big (nearest competitor, five) per Circulation Pulse '72, latest available.

Outside Kalamazoo county, WKZO reaches three times more adults than all competing stations combined.

This market is rich—more than $7 billion in effective buying income and $4.2 billion in retail sales.*

*Arbitron/ADI, Feb. 1978

▲ WKZO is Kalamazoo's Top-ranked Adult Station

During both the broadcast day and week, WKZO delivers 39% more adults 18+ than its closest competitor. More of the male audience 18+ and 25+ listen to WKZO during early drive time than to all five competitors combined. And, more women 18+ and 25+ listen to WKZO during early drive time than to any other station in the market any time of day.**

WKZO is the undisputed adult leader, reaching and selling the affluent mature radio listener in Kalamazoo.

The Dynamite Dozen.

How would you like to reach 12 upper income communities where 73% of the adults have an average household income of $25,000? You can—with us. Our powerful market could have been custom built just for you. We reach more than 150,000 homes in Birmingham, West Bloomfield, Troy, Rochester, Southfield, Farmington, Redford, Livonia, Plymouth, Canton, Westland and Garden City.

When you advertise in the 12 Observer & Eccentric Newspapers, you advertise in papers that reach more people in their own hometowns combined than the Detroit Free Press or the News.

You can't beat our combination of penetration and purchasing power. Call us today. And ask for our TNT Report—it's dynamite.

TOP THIS . . . BIG APPLE

Bergen, the only New Jersey county in the New York SMSA, has the highest median household Effective Buying Income (EBI) in the entire New York SMSA! And . . . what's more, Bergen tops Nassau and Fairfield too.
You can't reach Bergen without The Record. It has more circulation in Bergen County — daily or Sunday — than all the New York City and Newark newspapers combined.

*For more information about a top market . . .
phone (201) 646-4214.*

IN NEW JERSEY RETAIL SALES

GOOD BUY . . . BIG APPLE

Last year retail sales in Bergen (the only New Jersey county in the New York SMSA) topped $3.7 billion! With per household retail sales of $12,246, Bergen ranks #1 in New Jersey and 56% greater than the New York SMSA average!

You need The Record to reach Bergen. It has more circulation in Bergen County — daily or Sunday — than all the New York City and Newark newspapers combined.

For more information about a good buy . . . phone (201)-646-4214.

New Jersey's Largest Evening Newspaper **The Record**

A new way to buy the rich western Carolinas

Reach 87% of the Buying Power in the ADI with one combination discount buy!

The second largest ADI in the Carolinas. 37th in the U.S. Also, one of the richest, with $7.5 billion effective buying income. **The Greenville/Spartanburg, South Carolina** "Little Giant" metro area, combined with the important **Asheville, North Carolina** metro area, forms one of the largest, fastest-growing areas in the Southeast.

Now, one combination buy delivers this market. These newspapers cover 20 of the 29 ADI counties with $3.7 billion in retail sales (86% of the total sales in the ADI). A net, unduplicated 373,100 adult readers weekdays and 442,300 adult readers Sundays. All this, and a discount, too. For more facts on the best advertising buy in the Carolinas, talk with your Sawyer, Ferguson & Walker Representative.

NASHVILLE
"TEST MARKET, U.S.A."

"Music City, U.S.A." may just become "Test Market, U.S.A." For in Nashville, lab conditions are ideal to test national products and campaigns. Here's why:

RIGHT SIZE. Nashville's 156,000 households and its SMSA's 260,900 are well within the limits required of good test markets.

MARKET PROTECTION. Nashville's media carry the message to SMSA without outside media interference.

REPRESENTATIVE POPULATION. A healthy mix of blue collar, white collar, and professional workers insure distortion-free results.

STABLE ECONOMY. Nashville has been called a "recession-proof market" and its unemployment rates are always below the national average.

A special invitation to the readers of Sales & Marketing Management

Join America's top sales and marketing executives for cocktails and lunch at the Waldorf-Astoria, Thursday, January 17, 1980

The top sales and marketing organizations of 1979 will be honored at Sales & Marketing Management's Fifth Annual Awards Luncheon, to be held on Thursday, Jan. 17, at the Waldorf-Astoria Hotel in New York City.

Three Grand Awards and nine Distinguished Awards will be presented to companies whose accomplishments in their respective fields have been outstanding. Marketing executives from those companies will be on hand to accept the awards, and the executives from the three top companies will speak briefly on some of the reasons for their success.

More than 30 Excellence Awards will also be presented to organizations that stood out in a particular segment of sales and marketing in 1979. And a surprise guest—someone whose impact on marketing goes beyond any single category—will receive S&MM's Special Citation.

Join us on Jan. 17 and you'll have a chance to meet marketers from companies whose success stories you'll want to hear. To make reservations for yourself and your colleagues, return the coupon, or call International Meeting Planners at (212) 532-6747. The charge of $25 per person includes cocktails and lunch. Reservations are limited, so act now to avoid disappointment.

The Program

Cocktails

A pre-luncheon mixer gives you the opportunity to meet the 1980 Award Winners. We can't announce their names yet, but attendees at last year's lunch had the opportunity to rub elbows with senior sales and marketing executives from more than 40 leading organizations, including AT&T, Armstrong Cork, Atlas Copco, Bobbie Brooks, CertainTeed, Coca-Cola, Hyster, Jewel Food Stores, Kellogg's, Nalco Chemical, Perrier, Pfaudler, Rockwell International, and Westinghouse.

Luncheon

Approximately half of the luncheon attendees will be representatives of award-winning companies, so you will have plenty of opportunity to exchange ideas with some of the most successful of your peers.

Presentations

Brief presentations from top award winners will follow. Last year's audience heard from Archie J. McGill, Vice President of Business Marketing, AT&T; Jack Greer, Vice President of Marketing, U.S. Industrial Truck Operations, Hyster; Bruce S. Nevins, President, Perrier; and special guest Walter S. Taylor, maverick marketer and owner of Bully Hill Vineyards.

S&MM
Awards
Luncheon

To: Mr. Robert H. Albert/Editor
Sales & Marketing Management Magazine
633 Third Avenue
New York, N.Y. 10017

☐ Yes! I would like to attend Sales & Marketing Management's Fifth Annual Awards Luncheon on January 17th, 1980 at the Waldorf-Astoria Hotel in New York City.

S&MM'S FOUR SURVEY ISSUES

Each year Sales & Marketing Management publishes four *Survey* issues, which, taken together, provide a comprehensive and convenient information system for both consumer and industrial marketers. The data contained in the four *Survey* issues facilitate the analysis and selection of local geographic markets as well as target customer markets, the development of appropriate sales strategies for reaching those markets, and the comparison of the costs of selling in the geographical markets.

Survey of Buying Power, published in July, includes the most current estimates of the demographic and socioeconomic factors of regions, states, metropolitan markets, counties, and cities.

Survey of Buying Power —Part II, published in October, rearranges the basic *Survey* data in terms of TV and newspaper markets so that markets can be evaluated in media terms; it also gives a five-year projection of metropolitan markets, as well as current data on merchandise line sales for several product categories.

Survey of Selling Costs, published in February, includes detailed information on the basic selling costs of the leading metropolitan markets in the U.S. and Canada, plus data on such marketing-related expenses as sales training, sales meetings, car rentals, and salespeople's compensation.

Survey of Industrial Purchasing Power, published in April, provides data on total manufacturing activity at the county level, as well as local market information on 457 customer industries that buy goods and services from consumer and industrial products manufacturers.

Is your ad in Dallas taking the afternoon off?

If you're buying Dallas, you should be buying Dallas' all-day paper – the Dallas Times Herald. Because long after the competition's gone to bed, we're still hard at work.

But we not only work longer hours.

We deliver more readers, too.

Our new Morning Edition has increased our average weekday circulation by 7,000. Together with our continued leads in Dallas, Dallas County and the SMSA, it's made us one of the three largest all-day papers in the U.S. Right up there with the Chicago Tribune and the Boston Globe.

If our all-day paper sounds good, wait till you see it. We've redesigned our format to give the paper a cleaner, fresher look. It makes everything on the page stand out. Especially your advertising.

So next time you buy Dallas, buy the paper that works harder for you. All day long. Buy Dallas' all-day paper.

Dallas Times Herald

Fresher than ever, all day long.

"Get me coffee, get me the Saudi file, get me Ellsworth in Accounting, get me Najeeb in Kuwait. And where's my morning Chronicle?"

When you're trying to reach the people who get things done in the Southwest, The Houston Chronicle is the place to advertise.

The Chronicle leads Houston in daily and Sunday circulation. And in retail, general, classified and total advertising.

Each edition of The Chronicle is filled with the latest national and business news, articles from The New York Times, The Washington Post and The Los Angeles Times, and the regular special features of the paper, whether it's on the newsstand in the morning, or on the front lawn in the evening.

Houston Chronicle

We put a little extra in your day.

Represented nationally by Sawyer Ferguson Walker.

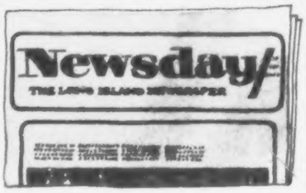
If the *Survey of Buying Power* is important to your work, you owe it
to yourself to see and evaluate the new 1979 *Survey of Buying Power*
DATA SERVICE. For more information, see the brochure in this magazine.

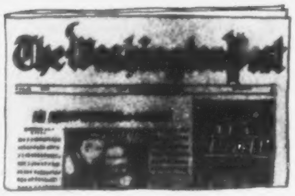
WHAT MAKES THESE THE FOUR FASTEST GROWING DAILIES IN THE COUNTRY?

Chicago Sun-Times

It's a darn good paper and the Chicago Daily News folded.



It's a darn good paper and the Times, Post and Daily News all went on strike.



It's a darn good paper and there's been an increase in service-oriented jobs held by people who need to start their days more informed by reading a morning newspaper.

Post-Intelligencer

It's a darn good paper and more and more, Seattle needs its news in the morning. That's because like Washington D.C., Seattle has a service economy. Nearly three out of four jobs in Seattle are service-oriented. That means a later start in the working day; people have more time to read the morning paper and need to arrive on the job fully informed. That's why, in the last six months, the P-I has grown at a rate of 6.3%. And since we're the morning paper, we offer you more readers per copy. The P-I is read and passed along throughout the day. in fact, we have 2.5 readers for every copy— 497,000 in all. And look at how we're growing!

WAKE UP TO THE SEATTLE P-I.

SPOKANE

ESSENTIAL FOR PACIFIC NORTHWEST COVERAGE

Spokane is the rich, dynamic newspaper market you must reach to effectively cover the Pacific Northwest.

THE SPOKANE MARKET:

- Spans parts of three states
- Spends $4.5 billion annually on retail purchases
- Is home for over 1.3 million people

The Spokesman-Review and Spokane Daily Chronicle reach your potential customers in this primary newspaper market every day. Put them to work for you.

THE SPOKESMAN-REVIEW
Morning and Sunday

Spokane Daily Chronicle
Evening

REPRESENTED NATIONALLY BY CRESMER, WOODWARD, O'MARA AND ORMSBEE, INC.

Only ACB Newspaper Advertising Research can tell you all this–and customize it to your specific needs.

1 To qualify as a **newspaper market**, a city must have at least one daily newspaper with a minimum paid circulation of 25,000. If two or more qualifying cities are in the same county, they are combined into a multiple-newspaper market. For a newspaper city to be part of a multiple-newspaper market name, it must be at least one-third as large as the largest city in the market, or part of the metropolitan name. Each county in a newspaper market is one in which the combined qualified newspapers penetrate 20% or more of the households. Three types of counties are included: (1) *home county*, which identifies the location of the newspapers; (2) *dominant counties*, where the newspaper household penetration is 50% or more; and (3) *effective counties*, where coverage ranges from 20% to 49%. This classification provides a guide for focussing on the newspapers' strongest coverage areas, as well as for determining where additional support may be needed to achieve a desired penetration level.

The data source is the Audit Bureau of Circulation's data bank, which includes the audited statements of individual newspapers as of May 1979.

2 Population is the number of people living in the newspaper market as of 12/31/78. It includes people living in colleges and hospitals, and armed forces personnel (and their dependents) permanently assigned to the area, but excludes transients and tourists. **Households** are units made up of the people occupying a single housing unit under 1970 census rules—such as a house, an apartment, a group of rooms, or a single room. The members of a household need not be related, and a single person living alone in a housing unit is also counted as a household.

All persons who are not members of households are regarded as living in group quarters: institutions, college dormitories, military barracks, etc. Caution: Although a county's population total will include all the people in the area, the household total will not do so because it excludes those living in group quarters. Thus if you calculate average Effective Buying Income per household, it must be recognized that this indicator does include the income of people not living in households.

3 Effective Buying Income (EBI), a classification developed exclusively by Sales & Marketing Management, is personal income less personal tax and nontax payments. Personal income is the aggregate of wages and salaries, other labor income (such as employer contributions to private pension funds), proprietors' income, rental income (which includes imputed rental income of owner-occupants of nonfarm dwellings), dividends paid by corporations, personal interest income from all sources, and transfer payments (such as pensions and welfare assistance). Deducted from this total are personal taxes (federal, state, and local), nontax payments (such as fines, fees, penalties), and personal contributions for social insurance. The resultant figure is commonly known as "disposable personal income." Market Statistics, the research division of Bill Communications that prepares the *Survey* data, removes from this figure compensation paid to military, diplomatic, and business personnel stationed overseas to arrive at Effective Buying Income.

Effective Buying Income is a bulk measurement of market potential. It indicates the general ability to buy and is essential in comparing, selecting, and grouping markets on that basis. But for products that appeal to specific income classes, the percent of households by Effective Buying Income groups, as reported in the July 23rd *Survey of Buying Power*, should be considered.

4 Total retail sales are all net sales (minus refunds and allowances for returns) of establishments engaged primarily in retail trade. Sales taxes collected from the customer and receipts from repairs and other services are also included. On the other hand, retail sales by such nonretailers as wholesalers and service establishments are not counted. Although retail sales are often used to gauge the purchasing power of the residents in a market, they are only an approximation because the market's volume may be affected by the movement of shoppers to and from adjacent areas, as well as purchases by nonhousehold units such as businesses, and the inhabitants of group quarters. They are actually a measure of the drawing power of local retail establishments.

The Total Retail Sales figure includes store types not listed in the 1979 *Survey*. Thus the arithmetic difference between Total Retail Sales and the aggregate sales of the major store types detailed in the *Survey* represents sales of "All Other Stores," so to speak. The "All Other Stores" category includes liquor, sporting goods, book, stationery, jewelry, hobby and toy, photographic, and gift stores, as well as nonstore retailers.

5 Individual **retail store groups** are considered as channels of distribution in local markets. Thus the retail sales total of the particular store group through which your product moves is useful in analyzing the relative importance of that distribution channel. Bear in mind that the retail sales total of a store type represents the cumulative sales of all products and/or services handled by the store, and not just the type of products associated with the store type. That is, food stores sell more than food products, and drugstores sell more than health and beauty aids.

Separate sales totals are provided for (1) *food stores*, which sell food primarily for home consumption; (2) *general merchandise stores*, which include department, limited-price variety, and general merchandise stores; (3) *furniture, home furnishings*, and *appliance stores (FHA)*; (4) *automotive dealers*, which include those selling domestic and imported cars, new and used; stores selling tires, batteries, and accessories; and (5) *drug and proprietary stores*.

6 Individual county newspaper circulation totals are added and expressed as a **percentage of all households covered** in the market. In multiple newspaper markets, circulations of all qualifying papers are combined. In such markets, however, the coverage ratio is only a general guide because it is impossible to measure the degree of circulation duplication that may exist.

NOTE: There are no U.S. totals for S&MM's newspaper markets because the number of duplicate counties—that is, the same county that is part of more than one newspaper market—would make such a total meaningless.

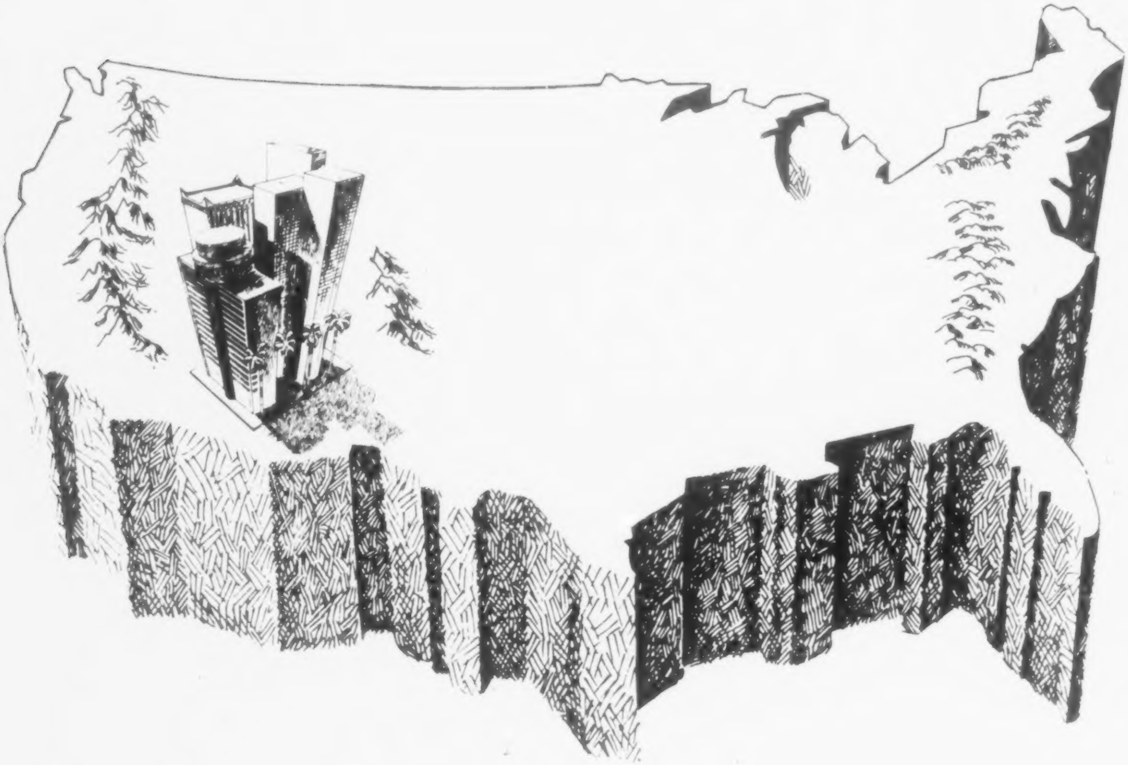
ORANGE COUNTY METRO GROUP

Orange County, CA 92711

Represented nationally by Story & Kelly-Smith

Test the U.S. in Phoenix.



When you test Phoenix, America's mobility and our ever-growing sunbelt migration give you opinions from Chicago, Poughkeepsie, and Oakland as well.

Phoenix gives you less than 5% deviation along all national demographic lines, and has the additional plus of a highly mobile population: the folks who pulled up roots from back home and are willing to try something new, including your test product.

Phoenix Newspapers dominate this major urban market with 81% weekly penetration metro households for a combined daily circulation of 301,000 and 308,000 on Sundays. No spill-in, no spill-out. You get contained, controlled testing with a near perfect statistical base. Our only blemish is that the people who read our newspaper tend toward the higher income levels, reflecting (as Phoenix will so well for you) a national trend.

For more information and a free copy of our new "Inside Phoenix" contact Howard Ruby, The Phoenix Newspapers, P.O. Box 1950S, Phoenix, AZ 85001. He'll help you buy the best test in the West, the Midwest or the U.S.

1977 Survey of Buying Power

We've got your numbers.

To be a successful advertiser in the vast, vital Southern California market you need a medium with the right numbers. In both quantity and quality. One that takes the gamble out of your marketing strategy.

That's precisely what you get with the Los Angeles Times. The Times is read by more than 2 million adults every day of the year. And Times readers are prime prospects.

Nearly 73% of all Los Angeles households earning $50,000 a year and more receive The Times. More than 1.3 million Times readers are college educated. And close to 50% of the area's professionals and executives buy our newspaper.

When you want to reach Southern California, choose a medium that scores high in the numbers game. Choose The Times.

Los Angeles Times

We deliver Southern California.

Offices in New York, Chicago, Detroit and San Francisco

SAN FRANCISCO NEWSPAPERS

ONE BUY BUYS YOU THE NATION'S 7TH SMSA

At the heart of the broad and lucrative San Francisco market are five counties that spent $13 billion on retail goods last year.

To capitalize on that kind of purchase power you need the total market penetration that only The Chronicle and The Examiner provide.

One newspaper buy gives you 1½ million SMSA consumers, including 76% of those with $25,000+ household income. And that's only the start of coverage that carries you all over Northern California.

TRY THE RECIPE FOR SUCCESS IN DENVER:

THE DENVER POST
SOUP
CORN
MILK
COFFEE

HIRE THE DENVER POST.

There's no secret to it. Food advertising placed in The Post is successful because it reaches women with bigger household budgets. Scarborough Research[1] shows 23.8% of the women who read The Post are from households with incomes of $25,000 or more. That's true for only 18.9% of the women reading the other paper. And The Post has the edge in category after category measuring Denver's upscale market.

If you really want to zero-in on homemakers, try our weekly Food Section. Every Wednesday, our award-winning Food Editor blends just the right ingredients (recipes, articles and photos) to keep these women reading.

We serve up the right market. That's why The Post carries 54% of Denver's food advertising daily, 60% on Sunday[2], and 78% of the coupon-clippers[3]. So if you want to find out what's cooking in Denver and at The Post, call us direct, collect (303) 297-1421 or contact Sawyer-Ferguson-Walker.

For spot advertisers in Washington, this is the only spot you need.

Coal Firm Settles in Job-Bias Case

For major national or regional advertisers, supplementing a network TV buy with local spots is standard operating procedure.

Standard everywhere, that is, except for Washington, D.C.

Washington is the market that breaks the rules. It's a newspaper market, because education and income are ahead of all other major markets. With a truly unique newspaper to match the audience.

The Washington Post.

The Post provides the mental sustenance this upscale market demands. And the advertising they're looking for.

Yankelovich, Skelly and White, Inc. found that Washington has the highest interest in news of any market they've studied, and also has the lowest level of interest in watching TV. That's why Washington has the next-to-worst TV ratings in the entire top 20 ADI's.

And why an ad in The Washington Post can do what television can't.

The numbers prove it. TV ratings in Washington are a whopping 20% below the average of those 20 markets. At the same time, The Post has the highest morning and Sunday market penetration of the country's biggest newspapers. Washington is a newspaper town. And with The Post's 55% daily and 63% Sunday coverage of adults, you'd have to buy a ton of TV even to come close.

So when it comes to Washington, don't supplement your network buy with spot TV. Supplement it with The Washington Post, and get more.

You see, Washington's not your normal market. And The Post is not your normal newspaper.

For a free brochure that'll tell you more about TV and The Post in this uncommon market, write to Jack Kerrigan, The Washington Post, 1150 15th St. NW, Washington D.C., or call 202/334-7750.

The Washington Post

Nothing even comes close.

THE QUALITY BUY IN FLORIDA'S QUALITY MARKET

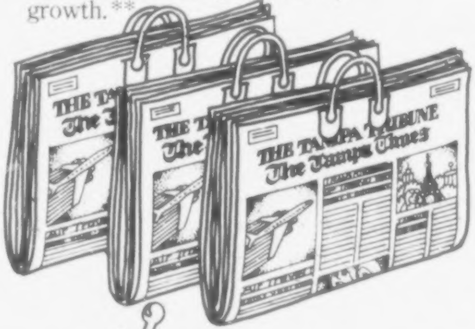
Florida's #1 Supermarket Market

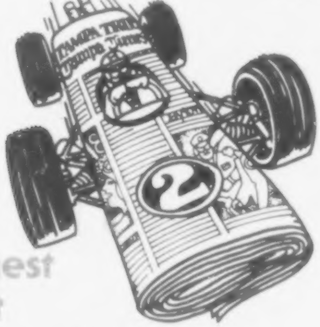
The Tampa-St. Pete area is bagging bigger business! We're now Florida's #1 market in total supermarket sales. And #2 in total food sales.* America's fastest growing major market has a big, big appetite!

THE TAMPA TRIBUNE
The Tampa Times

Florida's Second Largest Travel Market

Last year, nearly 7 million passengers were served by Tampa International Airport. That's a 19% increase over 1977, much better than the national average air facility growth.**





Florida's Second Largest Auto Market

Over 1 billion dollars! That's the value of car sales in the Tampa-St. Pete area last year, making us Florida's second largest auto market.* And if you think we're racing for the number one slot, you're right.

TAMPA TRIBUNE
The Tampa Times

Florida's Second Largest Liquor Market

Tampa-St. Pete is pouring it on — liquor case sales are growing 3 times faster than the national trend. That makes us the 16th largest liquor market in the entire country.***

**Find out why the Tampa Tribune-Times is the quality buy in Tampa-St. Pete.
Just send us your business card and we'll mail you our latest market brief, "The Quality Buy."**

We're Continually Surveying The
LOUISVILLE MARKET . . .

The Belden Continuing Market Study is an in-depth survey of adults in our newspaper audience. It's sponsored by The Courier-Journal and The Louisville Times.

Since 1971, the CMS has provided our advertisers with trend information and useful insights into the shopping habits, purchasing patterns, and media usage of adults living in the Louisville ADI (includes the 5-county metro area).

While We're consistently Reaching The Louisville Reader!

The Courier-Journal/Times is ranked 2nd in the nation in total penetration. That says it all.

For more information on our continuing Belden Research Program, write or call The Louisville Buyline (502) 582-4703 (call collect).

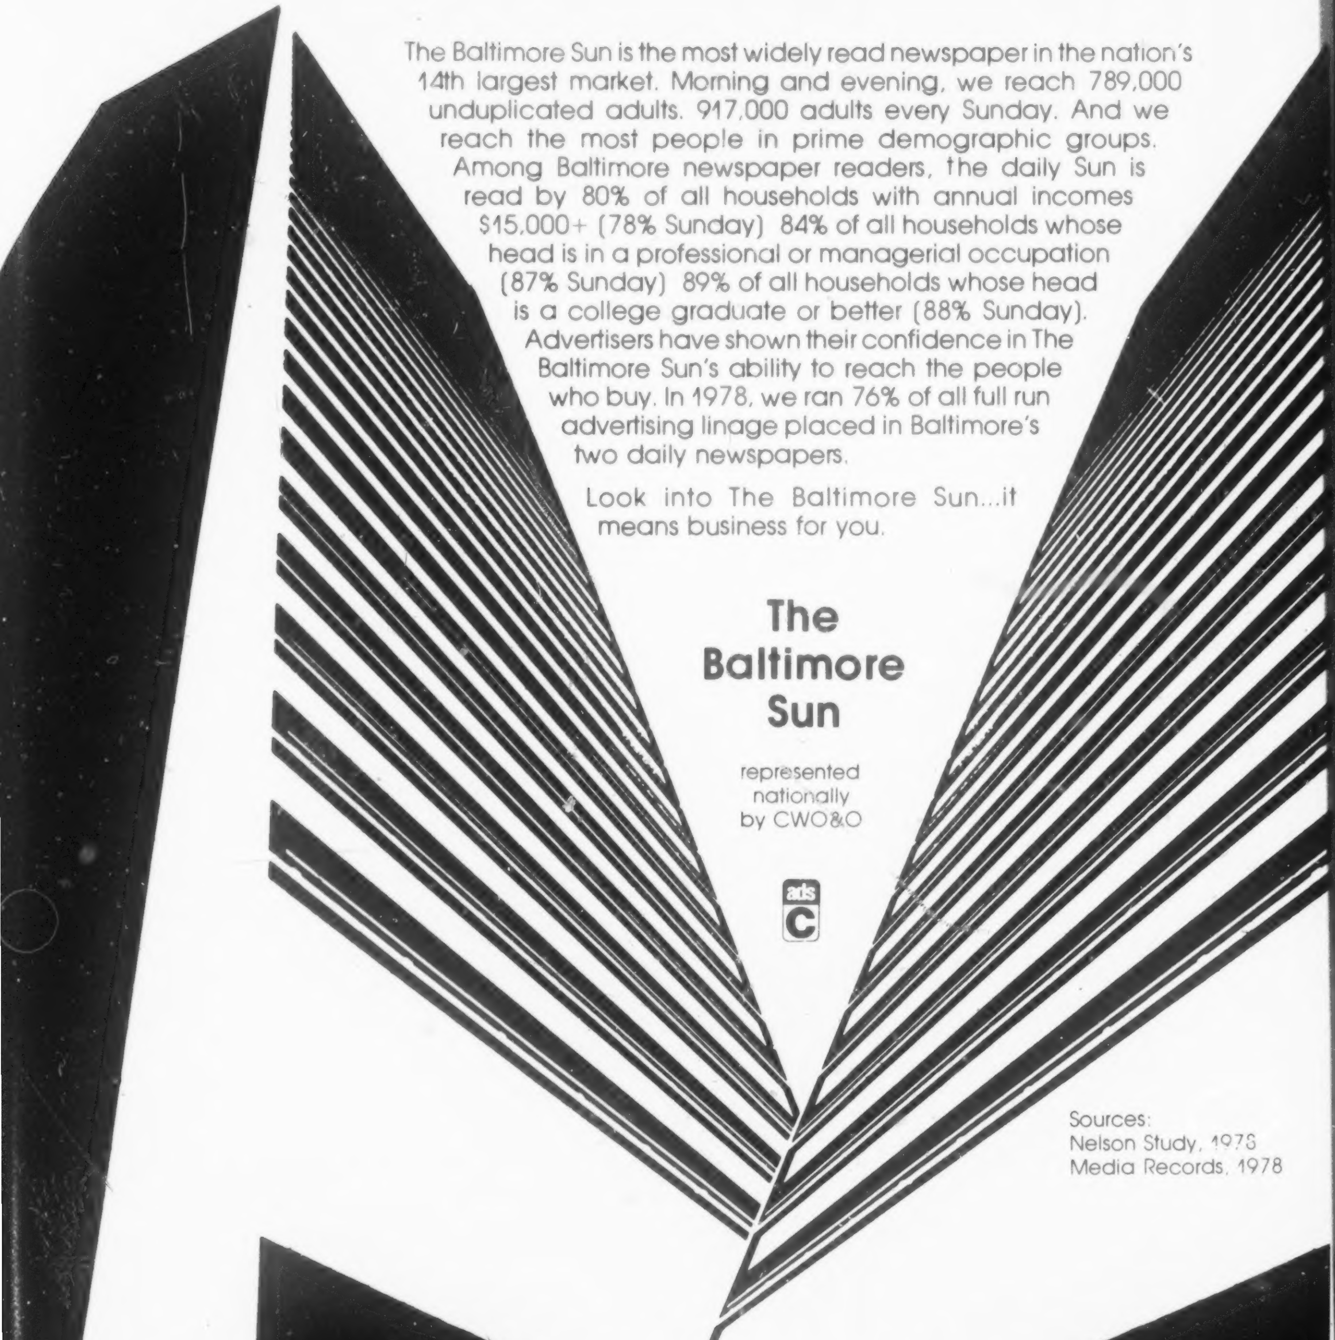
The Baltimore Sun means Business



The Baltimore Sun is the most widely read newspaper in the nation's 14th largest market. Morning and evening, we reach 789,000 unduplicated adults. 917,000 adults every Sunday. And we reach the most people in prime demographic groups. Among Baltimore newspaper readers, the daily Sun is read by 80% of all households with annual incomes $15,000+ (78% Sunday) 84% of all households whose head is in a professional or managerial occupation (87% Sunday) 89% of all households whose head is a college graduate or better (88% Sunday). Advertisers have shown their confidence in The Baltimore Sun's ability to reach the people who buy. In 1978, we ran 76% of all full run advertising linage placed in Baltimore's two daily newspapers.

Look into The Baltimore Sun...it means business for you.

PEOPLE REALLY READ'EM.

A recent Market Opinion Research survey* came up with some pretty impressive statistics:

For instance: 85% of the suburban newspaper readers in the areas we cover are PANAX readers. Over 1,100,000 readers in all. What's more, 86% of those free spending suburbanites who visited stores or used businesses did so **because** of an ad in a PANAX newspaper.

So no matter what you're selling — PANAX readers are buying.

For more information on how to get the lion's share of over $6.6 billion** in retail sales in our market — or how a unique combination buy with the Observer & Eccentric newspapers can put your message in over 500,000 suburban Detroit homes — call John Banks or John Flack at (313) 274-2332.

Compared to us, Sports Illustrated has nothing to cheer about.

Call it what you will. Home field advantage. An underdog's tenacity. An overlooked scouting report. When we challenged *Sports Illustrated* in Boothland for supremacy in adult male readership figures, it was strictly no contest.

The score alone says that. Booth, 450,000 adult male readers. *Sports Illustrated*, a woeful 126,085. Oh, we don't claim we could chew up a strong opponent like *Sports Illustrated* everywhere. But at home, we're hard to beat.

Our 44 leading Michigan counties top out as America's 7th leading metro market. The 8th largest market in car sales and auto aftermarket. 12th in liquor. And 13th in apparel.

If those are the kind of scores that will make your client a winner, phone Booth today at (313) 569-2474 or contact your local Booth/Newhouse Newspaper representative.

He'll have you cheering for Booth, too.

Booth. America's most overlooked market.

IS AMERICA READY FOR FREEZE-DRIED KUMQUATS?

There's one good way to find out: test them.

And there's one very good place to test them: Minneapolis.

For some very, very good reasons:

WE'VE GOT YOUR NUMBERS.

Our SMSA numbers just over 2,000,000 in total population. With that large a base, you're going to end up with some statistically significant numbers to tabulate—whether you test the entire market, or specific breakouts by age, sex, race, area, etc.

And, by the way, unlike some test markets, we don't claim to represent a precise microcosm of the total American population; we're a bit more affluent and a bit younger. In other words, we think we have a bit more of the people you're looking for.

A BIG SOMEWHERE IN THE MIDDLE OF NOWHERE.

Our big, diverse market is a few hundred miles from its nearest metropolitan neighbor; you'll be able to search for your answers in America's largest market and media isolation booth.

IF YOU'VE GOT THE MESSAGE, WE'VE GOT THE MEDIA.

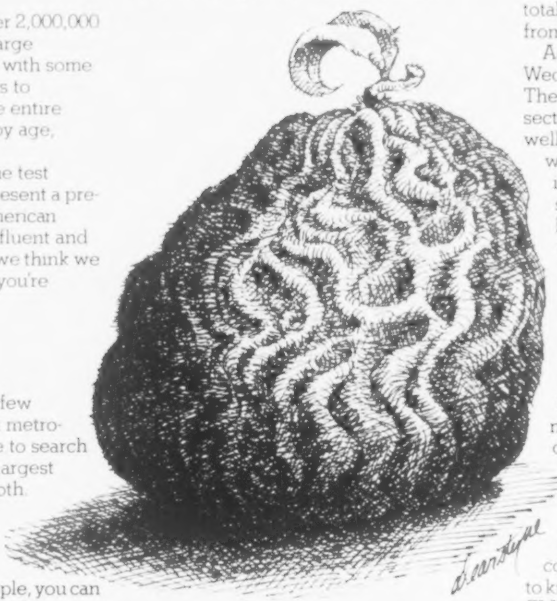
To reach any, or all, of our people, you can choose among 30 commercial radio stations, 4 commercial TV stations (ABC, CBS, NBC, and independent), excellent billboard and transit advertising, and any number of daily, weekly, neighborhood, or giveaway newspapers.

But above all, you can choose the test marketer's dream media: The Minneapolis Star and the Minneapolis Tribune.

THE STAR AND TRIBUNE WORK WITH YOU.

We have about 70 display salespeople calling on retailers throughout the area. They know their market and will be happy to share their knowledge of it with you.

Our marketing research department can provide complete, video-taped focus group testing for much less than you'd probably pay for comparable services elsewhere. You can test products, ads, packaging, prices, etc. with groups of the size and composition of your choice.



Finally, in cooperation with Testmark, a division of the world's largest food wholesaler, we've designed a basic, confidential food and related products test to track movement through Minneapolis supermarkets. Through Testmark, we can also offer interviews with store managers, customer intercepts, product placement, taste tests, and more: much more, indeed, than most other newspapers can offer.

THE STAR AND TRIBUNE WORK FOR YOU.

The Minneapolis Star and the Minneapolis Tribune have a combined daily circulation of 458,060, while the Sunday Tribune enjoys a circulation of 608,550. That includes metro-market coverage of 53% and 60% respectively. (The percentages look even better in the more elevated reaches of income, occupation, and education.) Within our total circulation, moreover, you can choose from more than 68 different zones.

Adding to our attractiveness are the Wednesday evening "Taste" section of The Star and the "Thursday/Food" section of the Tribune. These exceptionally well-designed sections offer extremely well-read vehicles for your food advertising. And, with our special five-day stretchout rate, you can place one ad in both sections, covering two buying weekends.

A NICE PLACE TO VISIT. AND YOU WOULDN'T MIND LIVING HERE.

The trouble with some test markets is that they test your endurance as much as they test your product's acceptance. Not Minneapolis. We've got plenty of music, sports, theater, saloons and other cultural attractions to help you fill the hours when the supermarkets are closed.

TEST OUR TEST MARKET: FREE.

Our 31-page "Test Market Survival Kit" contains just about everything you need to know about the demographics of our SMSA, our market and media isolation, our media efficiency, channels of distribution, and Star/Tribune marketing assistance.

For your free copy, call or write our Display Advertising Manager, Jim Anderson, The Minneapolis Star/Minneapolis Tribune, 425 Portland Ave., Minneapolis, MN 55488, (612) 372-3907.

Then come to Minneapolis and find out whether or not your new freeze-dried idea is half-baked.

YOU'LL FIND OUT IN MINNEAPOLIS. THE MAJOR MARKET TEST MARKET.

The Minneapolis Star/Minneapolis Tribune

Syracuse. Good numbers. Better results.

Every smart media planner knows that no matter how good the numbers look, there's nothing like a track record to determine media effectiveness.

And judging by the reputation of The Syracuse Newspapers, we're high on the effectiveness scale. Syracuse didn't get to be #13 nationally in food lineage by accident!

Our combined morning and evening unduplicated cumulative weekday audience of our three-county SMSA tops 84% and on Sunday . . . 87%. That's 446,000 total adults with a median household income $874 above the national average.

But on top of that, our actual coverage includes the five* counties in our retail trading zone—over 800,000 people.

Those extra two counties are the "hidden bonus" you get when you buy The Syracuse Newspapers.

Like the man says: Don't buy the numbers . . . buy results.

Call The Syracuse Newspapers at 315/473-7765.

*(Onondaga, Madison, Oswego, Cortland, Cayuga)

Look out Dallas... here comes the Tulsa newspaper team!

Before advertisers in Dallas buy space in the Tulsa daily newspapers, they have to be sold on our market.

That's why throughout the year we fly special sales teams to major markets across the nation...to tell national advertisers, retailers and their agencies about the strong, diversified and growing Tulsa market.

At the same time, we show how to take advantage of the tremendous advertising opportunity the Tulsa papers offer in reaching over a half-million readers in northeastern Oklahoma.

On their way to Dallas are from left, John Henry, Retail Sales; Stephen Bright, Special Sales; Rozella Loar, National Sales; Ken Somers, Advertising Director; Rod Hatchett, Co-op Sales and John Krymski, Retail Sales.

If you want to learn more about the terrific Tulsa market, you don't have to come see us...we're probably on our way to see you, right now!

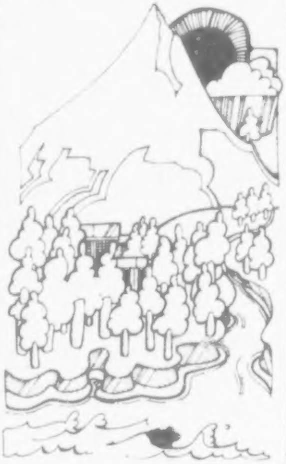
Why we've failed to remain anonymous.

Will everyone please stop saying nice things about Portland, Oregon?

Shortly after the dust settled on the Oregon Trail, a wonderful calm settled over our part of the world. During which, we Oregonians quietly went about our business in blissful obscurity.

But then, only a few years back, our tranquility was shattered. Suddenly, Oregon's progressive legislation and enlightened environmental policies became big news. Oregon found itself thrust into the limelight.

And, like it or not, we had to learn to deal with the open admiration of the masses, not to mention the already intense interest of some very sharp marketing people.



Can you find the city hidden in this picture? We've tried to stay well-concealed, tucked away between the Cascade mountain range and the Pacific Ocean.

The EPA didn't help matters any. First they branded Portland as America's "most livable" large city.

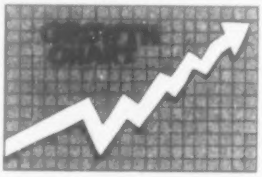
Advertising Age didn't help, either. It recently included Portland, Ore. on its list of the ten hottest growth markets in the U.S.

Testing: One, two, three

So, to the chagrin of those trying to convince the world that there is no land mass at all between California and Washington state, Oregon's fame only grew.

Notably, with test marketers. For three good reasons.

First, because Oregon's demographics are so strikingly similar to national averages, it's almost scary. Second, because Portland's media are so isolated, they're almost hermits.



Often, Oregonians try to convince outsiders that charts like this have been mistakenly printed upside down.

And third, because reaching Portland's million-plus consumers is so simple (buying Portland's two dailies results in 62.8% metro coverage daily, 65.9% on Sundays), it's almost too easy.

Since we publish the aforementioned daily newspapers, we're in a bit of a spot. Like most Oregonians, we're eager to downplay our state. But being in the newspaper business, we're also eager to serve advertisers.

That's why we're not directing this ad to anyone who would go blabbing about Oregon. Instead we're directing it to more mature and discreet advertisers, such as yourself, who know enough to keep a good thing to themselves.

Portland: The #22 ADI

And confidentially, this market is a good thing. So typical, it's an exceptional place to test new products. Yet dynamic enough for Portland to rank as the 22nd largest ADI and score high in everyday selling, too.

But please don't quote us.

We've also failed miserably at hushing up Oregon's unique recreational opportunities. So it's for sure we're not going to elaborate now on how Portland is only a short drive from sparkling ocean beaches. Or an hour's drive in the other direction from breathtaking 11,000 foot Mt. Hood.

Keep it under your hat

But we will share some valuable information with you, if you'll help us keep Oregon more or less a secret.

We're prepared to mail to you, in a plain brown wrapper, our Oregon Marketing Information, including the newly-revised Portland Marketing Manual. Better yet, we'll hand deliver it to your office to make sure it doesn't fall into the wrong hands.

As a last resort, should we try camouflaging Oregon's spectacular resorts?

You'll find it full of interesting facts about income levels, demographics, distribution channels, and more. And you'll also find it labeled, "Top Secret," for obvious reasons.

All you need do is fill out this coupon and mail it, hopefully without calling attention to yourself. And then, the great state of you-know-who will just be our little secret.

Huge corporate headquarters make Pittsburgh your top marketing target.

Pittsburgh's not just a "steel town" any more. Its status as the nation's third largest corporate headquarters makes it a lively, cosmopolitan city. And an affluent, well-educated market.

Twenty-three of the nation's top 500 companies call it home.

In fact, Pittsburgh boasts more chemical engineers than New York City, more nurses than St. Louis, more chemists than Boston, more industrial engineers than Houston and more computer analysts than Dallas-Ft. Worth!*

You reach 972,000 metro area adults daily with the Pittsburgh Press and Pittsburgh Post-Gazette and 1,135,000 with the Sunday Press.**

Contact Bill McCormick (412/263-1336) for details.

S&MM'S FOUR SURVEY ISSUES

Each year Sales & Marketing Management publishes four *Survey* issues, which, taken together, provide a comprehensive and convenient information system for both consumer and industrial marketers. The data contained in the four *Survey* issues facilitate the analysis and selection of local geographic markets as well as target customer markets, the development of appropriate sales strategies for reaching those markets, and the comparison of the costs of selling in the geographical markets.

Survey of Buying Power, published in July, includes the most current estimates of the demographic and socioeconomic factors of regions, states, metropolitan markets, counties, and cities.

Survey of Buying Power—Part II, published in October, rearranges the basic *Survey* data in terms of TV and newspaper markets so that markets can be evaluated in media terms; it also gives a five-year projection of metropolitan markets, as well as current data on merchandise line sales for several product categories.

Survey of Selling Costs, published in February, includes detailed information on the basic selling costs of the leading metropolitan markets in the U.S. and Canada, plus data on such marketing-related expenses as sales training, sales meetings, car rentals, and salespeople's compensation.

Survey of Industrial Purchasing Power, published in April, provides data on total manufacturing activity at the county level, as well as local market information on 457 customer industries that buy goods and services from consumer and industrial products manufacturers.

Our competition's just a pussycat with ad linage. We're king of the jungle.

You can bet your whiskers The Dallas Morning News does the job for its advertisers. We have the strength in circulation and the power in demographics that keeps us king year after year.

In fact, last year we had 6,243,233 more total ad lines than the evening paper.

We also led in important categories like travel, food, automotive and financial ads, with almost a million lines more in general ad linage. That represents a 54% share.

We think that's something worth roaring about.

Whatever you've got to sell, sells better in The Dallas Morning News. adsC

FOUR FACTS ABOUT SEATTLE NEWSPAPERS EVERY ADVERTISER SHOULD KNOW.

Fact: Seattle Times daily circulation reaches 566,243 people, over 128,890 more readers than the P.I.*

Fact: Seattle Times General Advertising rates per thousand readers are 21% less per line than the P.I.**

Fact: Seattle Times readers enjoy a higher income, they eat out more, buy more cars, more clothes and take more vacations than the average P.I. reader.***

Fact: The Seattle Times carries twice as much advertising as the P.I. and almost 50% more news.

The fact is, you get more power for your advertising dollar with Seattle's *best selling* newspaper. The Seattle Times.

THE SEATTLE TIMES

FIRST IN CIRCULATION. 7 DAYS A WEEK.

*Based on A.B.C. Publishers' Statements for 6 months ending March 31, 1979 (2.2 adults issue). **Adjusted to reflect equal space based on 6-column widths.

CO·OP ACTION PLAN

We'll help you and your salesforce implement a total sell-through program to your dealers for maximum sales results.

The Milwaukee Journal/Sentinel co-op team can help you put accrued dealer co-op dollars to work fast and effectively.

Let us show you how, through our Co-op Action Plan — you can earn retail rates and use any of a wide variety of formats . . . have invoices directed to meet your program's specific needs.

Our co-op department will work with your local representative in planning effective, localized advertising with impact that will bring more business through your dealer's front door.

Our Co-op Action Plan is big and it's proven. It has helped many sales managers build a more aggressive, stronger and profitable dealer organization.

For details on how it can work for you, call our man Bill Born, collect at (414) 224-2471.

Ask about Target Marketing

It's our program that delivers your preprinted inserts into the homes of selected, computer identified prospects — and does so for 1/3 the cost of direct mail!

If you do coupon promotions, we have exceptional know-how in a coupon-crazy market. Our experience is yours to maximize promotion effectiveness.

Call now or mail OUR coupon for fast facts.

"Videocom showed me a film about industrial fuses. Quite frankly, it scared the hell out of me!"

Looking for the most effective way to introduce an important new product? You're in good company. Ask George Carlisle, Compugraphic's Marketing Manager, Industrial Graphics Division:

"Initially, I wasn't sure that Videocom could project the excitement we needed for a new product introduction. Then, they showed me a film they'd done for Gould industrial fuses. I said, if you can make industrial fuses move me, then you've got to be good. Quite frankly, that film scared the hell out of me! I vowed after seeing that movie that if I ever had anything to do with industrial fuses in my entire life, I was going to go to Gould. If Videocom could do that with fuses, our product is going to be a piece of cake.

"We had never used film to sell a specific product before. But this product is radically different. It's a display ad mark-up terminal for the newspaper industry. We call it the AdVantage. We needed something that could, in about ten minutes, put the product across even more effectively than a hands-on demonstration.

"For us, it was a fantastic education just to see all the detail that went into creating an eleven-minute film. First of all, Videocom forced us to organize our thinking . . . to think more about the project, outline our objectives, and analyze exactly what we wanted to accomplish.

"The Videocom people are thorough professionals. They took the burden off me, and took care of all the details by thinking way ahead and anticipating any problems. Being a manager, I was really impressed with the way Videocom's people reacted to each other. There was an air of professionalism, of discipline, and there was no fooling around. There were night meetings, and an around-the-clock shooting schedule . . . it didn't make any difference what time it was, the professionalism was always there.

"The final cost was between $15,000 and $20,000. It seemed like a great deal of money at the time, but it's paid us back a hundred times over. Not only in the number of AdVantages that we sold, but in peripheral equipment, in enhancing our image in the newspaper industry, and as a sales training tool and personnel recruitment tool. Most important, there's nothing that gets a sales force more excited than a good sales tool that sells a product and makes a lot of money for them. When you talk about benefits like that, the decision to do the film and use Videocom was a good one."

VIDEOCOM

Guide to using S&MM'S SURVEY OF TELEVISION MARKETS

	S&MM ESTIMATES 1978										
	POPULATION—12/31/78			EFFECTIVE BUYING INCOME	RETAIL SALES BY STORE GROUP						
STATE S&MM/ARB TV (ADI) MARKET	Total Pop. (Thous.)	Total House-holds (Thous.)	Black Pop. (Thous.)	Total EBI ($000)	Total Retail Sales ($000)	Food ($000)	General Merchandise ($000)	Furniture/ Furnish / Appliance ($000)	Automotive ($000)	Drug ($000)	Buying Power Index
1	2			3	4	5					6

1 The *Survey*'s **TV markets** are the American Research Bureau's Areas of Dominant Influence (ADI). ARB (better known in the industry as Arbitron) studies each county for its measurable viewing patterns. The hours of viewing accorded each TV station whose signal reaches the county are totalled; then each station's percentage share of total viewing hours is calculated. The market of origin of the TV stations with the largest share of viewing hours becomes the ADI name of that market, and all counties whose largest viewing share is given to stations of that same market of origin are grouped within the ADI. (For its purposes, ARB splits certain counties, treating each portion as if it were a separate county.) Each county (or portion) is allocated exclusively to a single ADI, thus eliminating overlap. All of the U.S. is covered except for Hawaii and part of Alaska.

2 Population is the number of persons living in the ADI on 12/31/78. It includes those living in colleges and hospitals, and armed forces personnel (and their dependents) permanently assigned to the area, but excludes tourists and transients. **Households** are units made up of all the people occupying a single housing unit under 1970 census rules—such as a house, an apartment, a group of rooms, or a single room. The members of a household need not be related, and a single person living alone in a housing unit is also counted as a household.

All persons who are not members of households are regarded as living in group quarters: institutions, college dormitories, military barracks, etc. Caution: Although a county's population total will include all the people in the area, the household total will not do so because it excludes those living in group quarters. Thus if you calculate average Effective Buying Income per household, it must be recognized that this indicator will include the income of people not living in households. A further refinement of total population is the number of **black persons** living in the ADI as of 12/31/78.

3 Effective Buying Income (EBI), a classification developed exclusively by Sales & Marketing Management, is personal income less personal tax and nontax payments. Personal income is the aggregate of wages and salaries, other labor income (such as employer contributions to private pension funds), proprietors' income, rental income (which includes imputed rental income of owner-occupants of nonfarm dwellings), dividends paid by corporations, personal interest income from all sources, and transfer payments (such as pensions and welfare assistance). Deducted from this total are personal taxes (federal, state, and local), nontax payments (such as fines, fees, penalties), and personal contributions for social insurance. The resultant figure is commonly known as "disposable personal income." Market Statistics, the research division of Bill Communications that prepares the *Survey* data, removes from this figure compensation paid to military and diplomatic personnel stationed overseas to arrive at Effective Buying Income.

Effective Buying Income is a bulk measurement of market potential. It indicates the general ability to buy and is essential in comparing, selecting, and grouping markets on that basis. But for products that appeal to specific income classes, the percent of households by Effective Buying Income groups, as reported in the July 23rd *Survey of Buying Power*, should be considered.

4 Total retail sales are net sales (minus refunds and allowances for returns) of establishments engaged primarily in retail trade. Sales taxes collected from the customer and receipts from repairs and other services are also included. On the other hand, retail sales by such nonretailers as wholesalers and service establishments are not counted. Although retail sales are often used to gauge the purchasing power of the residents in a market, they are only an approximation because the market's volume may be affected by the movement of shoppers to and from adjacent areas as well as by purchases by nonhousehold units such as businesses and the inhabitants of group quarters. They are actually a measure of the drawing power of local retail establishments.

The Total Retail Sales figure includes sales of store types not listed in the 1979 *Survey*. Thus the arithmetic difference between Total Retail Sales and the aggregate sales of the major store types detailed in the *Survey* represents sales of "All Other Stores," so to speak. The "All Other Stores" category includes liquor, sporting goods, book, stationery, jewelry, hobby and toy, photographic, and gift stores, as well as nonstore retailers.

5 Individual **retail store groups** are considered as channels of distribution in local markets. Thus the retail sales total of the particular store group through which your product moves is useful in analyzing the relative importance of that distribution channel. Bear in mind that the retail sales total of a store type represents the cumulative sales of all products and/or services handled by the store, and not just the type of products associated with the store type. That is, food stores sell more than food products, and drugstores sell more than health and beauty aids.

Separate sales totals are provided for (1) *food stores*, which sell food primarily for home consumption; (2) *general merchandise stores*, which include department, limited-price variety, and general merchandise stores; (3) *furniture, home furnishings*, and *appliance stores (FHA)*; (4) *automotive dealers*; which include those selling domestic and imported cars, new and used; and stores selling tires, batteries, and accessories; and (5) *drugstores*, which include *proprietary stores*.

6 Buying Power Index (BPI) is a weighted index that converts three basic elements—population, Effective Buying Income, and retail sales—into a measurement of a market's ability to buy, and expresses it as a percentage of the U.S. potential. It is calculated by giving a weight of 5 to the market's percent of the U.S. Effective Buying Income, 3 to its percent of U.S. retail sales, and 2 to its percent of U.S. population. The total of those weighted percents is then divided by 10 to arrive at the BPI. However, depending upon what your research has revealed about buyers of your product, you can construct your own customized BPI by using any of the factors contained in the tables and assigning to them what you think are relevant weights.

NOTE: Bellingham, Wash., ADI—After Section E's TV markets were compiled, the *Survey* was informed by Arbitron that it will eliminate Bellingham from its list of ADIs in 1980. Whatcom County, which comprised the Bellingham ADI, will be put into the Seattle-Tacoma ADI. Hence, the Whatcom totals shown on page 160 should be added to the Seattle-Tacoma totals.

SAN FRANCISCO NEWSPAPERS

THE LEADERS IN THE NATION'S 5TH LEADING ADI

Chronicle and Examiner readers include 68% of the professionals and executives across 10 counties, and more than two-thirds of the college-educated.

They're among nearly two million of the Bay Area's most responsible and responsive men and women who expect to find their brightest opportunities where they find the best news coverage — in a San Francisco Newspaper.

Let one media decision buy you both the largest and most dependable audience in Northern California.

Did You Ever See Gross Rating Points Buying Anything?

When was the last time you saw a rating point ahead of you in the supermarket line, or at the gas pump? Did you notice any gross rating points at the department stores where you shopped or at the restaurants where you dined last week?

You didn't? That's strange. Because some advertisers base a large portion of their schedules on measuring gross rating points!

Sure, gross rating points represent people. *But they tell you nothing about the purchasing power of the people they represent.* Rating points all look alike. You can't tell an unemployed one from one with a $40,000 annual income. And, the rating services can't tell you either.

We can. We can tell you how many adults our papers are reaching *and the household incomes or purchasing power they represent.* Our Belden Continuing Market Study* enables us to give you these *vital facts* — and many more. They're all included in "The Indianapolis Newspaper Audience." It's yours for the asking.

Know what your ad dollars are buying. Ask your Star or News representative. Or, phone Alan Judkins, Advertising Director at (317) 633-1132.

*Belden Associates is an independent research organization which conducts continuing market studies in more than 60 markets.

Section F

Data in this *Survey of Buying Power—Part II* have been organized into six sections. The black index tabs along the right-hand edge of the book provide easy access to each section.

S&MM's Canadian Metropolitan Market Projections to 1983

By THAYER C. TAYLOR
Editorial Director
Survey of Buying Power

U.S. marketers who traditionally look to Canada for additional business can't count on the same growth that has buoyed sales in the recent past. According to the *Survey of Buying Power—Part II*, Canada's population in the 1978–83 forecast period will expand only 4.1%, less than the U.S.'s anticipated 5.1%. In 1973–78 the opposite pattern prevailed as Canada's 5.9% gain eclipsed the U.S.'s 4.2%.

Even so, marketers who pick their local market targets carefully will find promising sales-building opportunities. The West will continue to set a sizzling pace, more than doubling the all-Canada rate with a robust 9.7% population gain.

Surprisingly, the Atlantic region, long known as the country's depressed area, will offer marketers brighter prospects in the years ahead. There, population growth, at 4.2%, will top the national average. However, the growth will be highly centralized in Newfoundland, where it will be 5.8%. The region's three other provinces—New Brunswick, Nova Scotia, and Prince Edward Island—will continue to grow at below-average rates.

The reaction against bigness has not taken as firm a hold in Canada as it has in the U.S. As a result, Canada's 10 largest metro markets will, in the aggregate, top the national average with a 4.2% population gain between now and 1983.

Still, there will be striking contrasts among the country's top 10. Toronto, the No. 1 market, will enjoy a strong 6.0% gain, enabling it to put more distance between itself and second-place Montreal. That unhappy metropolis, wracked by the bitter "two cultures" dispute, will experience a 1.3% increment.

Alberta's two metropolises, spurred by the influx of business hoping to ride its energy boom, will score the healthiest advances among Canada's biggest markets. Calgary is expected to register a robust 15.3% gain, and Edmonton will be close behind with 12.2%. Elsewhere, the most impressive performance will occur in Ottawa, up 7.1%, helped along by the federal government's increasing role in Canadian affairs.

In fact, the seven markets expected to grow fastest in the forecast period are all from the western half of the country: Kelowna, B.C., up 35%; Prince George, B.C., 17%; Calgary, Alta., and Kamloops, B.C., 15% each; Edmonton, Alta., 12%; Regina, Sask., 11%, and Saskatoon, Sask., 10%.

A decelerating economic tempo will accompany the population growth slowdown forecast by *Survey II*. A new report by the Conference Board in Canada, *Reassessing Canada's Potential Economic Growth*, states that "Canada is in the midst of a period of adjustment to a lower sustainable rate of economic expansion compared to earlier periods." Contributing elements: "A significant productivity slowdown, which began during the 1974–75 recession and has not been reversed, a slowing down in the growth rate of the population of labor force age, and continuation of the trend towards shorter average weekly hours worked."

Over the near future,

SURVEY HIGHLIGHT

Canadian slowdown sets in

	1983 Projected Estimates	% Change 1978-83	% Change 1973-78

Sales & Marketing Management.

Caution:
1983 EBI projections for Canada

Effective Buying Income (EBI) estimates for Canadian counties are based on Census Economic Characteristics and Taxation Statistics reports, published by the Canadian government. Although the 1976 Census of Population redefined the legal boundaries of counties and cities, Taxation Statistics has not yet made this change and therefore does not provide the basic information required for making income projections to 1983. Nor has Canada yet released the Economic Characteristics report from the 1976 census.

Market Statistics, the research subsidiary of Bill Communications that prepares S&MM's *Survey of Buying Power* and *Survey II*, has tried to compensate for this lack of information by using the provincial totals provided by Taxation Statistics. Therefore, in projecting EBI per household to 1983 it makes *the assumption that every metropolitan area within the province will follow the same trend as the province itself.* The projected income per household of the metropolitan area is then multiplied by the projected number of households of the area to arrive at the projected 1983 total EBI. As a result, the 1983 EBI per household and total EBI data for the metropolitan areas are not directly comparable with last year's figures for plotting growth rates.

Canada will be buffeted by the fallout from the U.S.'s recessionary woes. Growth of real GNP (1971 $) is expected to drift down from a 3.4% gain in 1978 to 2.4% this year and 1.5% in 1980, says the Conference Board's latest quarterly forecast. Most economists in Canada put 1979 growth in the 2%-3% range and 1980 at 1.0%-2.5%.

Fortunately for marketers, the drop-off in consumer spending, if it occurs, won't be as steep. Consumer spending gains, in real terms, will recede from 3.1% in 1979 to 2.7% in 1980, says the Conference Board, adding that the impact will be felt most keenly in durable goods.

A more optimistic outlook is projected by Merrill Lynch Economics. A spokesman says that the firm expects Canadians to increase their spending from a 2.4% growth rate in 1979 to 2.7% in 1980. He notes that surveys show Canadians to be more optimistic about their economic future than their U.S. counterparts.

Industrial marketers, too, may find cheer in near-term prospects. Lawrence B. Krause, international economic consultant with the Goldman Sachs investment company, points out that "the most encouraging element in the Canadian situation is the revival in plant and equipment investment. The combination of much higher business profits and higher capacity utilization has encouraged significant expansion and modernization in many industries, despite the rather higher interest rates necessary to protect the [Canadian] dollar. The momentum of the investment boom will continue for a while, but it is bound to ease as final demand weakens at home and abroad."

In short, there will be plenty of marketing opportunities north of the border during the next few years. But in Canada as in the U.S., picking the right sales targets will determine whether a marketer ends up a hero or a goat. S&MM

BUSINESS WITH BILL*

[Frankly, an advertisement]

Yes, frankly, this is an ad. Our objective? If we can reflect to you the uniqueness of our Bill Communications' properties, then you can judge us even better as a reader, perhaps an advertiser, and maybe even a future fellow employee.

John Hartman
Chairman of the Board
Bill Communications, Inc.

Opportunity, to put it in a word, is what I've found at Bill and is what I value most about my experience here. Opportunity comes from working with people who will help you learn and grow and who will give you that extra push to discover the limits of the talents you have to offer. And opportunity also comes from working within an organization flexible and personal enough to allow you room to pursue a creative impulse in your work or even to try out new work arrangements at your job.

I think what I've been describing is something more important to providing job satisfaction than just comfortable surroundings or an office with a view. When I came to Bill, fresh out of school, I had no idea whether business journalism would be the place for me. Now, six-and-a-half years later, it may seem like a long time to have stayed at one job in the publishing business; but in reality, I've had four different job titles in my tenure here, and each has involved different responsibilities and challenges. In a real sense, I've been able to define my job for myself at every step of the way. And now that my position involves day-to-day responsibility for other people, it's all the more clear to me why an organization must protect its most important investment—its people. The payoff is commitment.

Matt Naitove
Plastics Technology Magazine
Managing Editor

With Bill: 7 years

Personally rewarding! Bill has been, and is, a place where self-motivation, determination, hard work and the sincere contributions of my associates' expertise have "opened doors" for personal growth.

I felt the impact of this statement recently when having lunch with very good friends of mine from another publishing company. As I listened to their comments, it became obvious that working with Bill Communications continues to be a refreshing way to do business.

We have the latitude to call upon our own abilities in choosing the methodology for our accomplishments. Therefore, false security is nonexistent; in its place is self-satisfaction. Within the company we have complete accessibility to all levels of management and information sources for assistance and answers. You only have to ask. To say I'm excited and proud to work for Bill Communications is putting it mildly. The open communication that is apparent within Bill, and the willingness and congeniality of all the people I have dealt with, provide an environment in which I enjoy working.

Enjoying your work puts one in an elite class, and I must conclude that Bill has most of the members!

Jobber/Retailer Magazine
Eastern Sales Manager
and Marketing Manager

With Bill: 6½ years

Approximately one-third of my day is spent at my job; therefore, I really want to be happy doing what I'm doing. Certainly with the warm, friendly, professional, and intelligent people at Bill Communications, this goal is achievable.

The idea of working in the publishing field seemed very exciting when the opportunity came along to be a part of Bill Communications. Starting in the Sales/Advertising Department of Sales & Marketing Management magazine as a secretary was a great way to begin. It gave me the opportunity to see, up close, one of the important areas of publishing.

One of the things that always impresses me is that people in this company are given the opportunity to improve their position by moving on to other areas. Getting that opportunity myself, I moved on to the Sales Builders Division and received training as assistant to the Art Director.

What better proof of happiness in your work than actual, honest job satisfaction? To discover what type of work appeals to you, to be trained in that field, to take an active interest in things associated with it, to do it to the best of your ability—culminating in the material and mental rewards of a job well done—all these constitute my idea of job happiness. This is why I like my job, and why I like working at Bill.

Guide to using S&MM's CANADIAN METROPOLITAN AREA PROJECTIONS

S&MM ESTIMATES	POPULATION					EFFECTIVE BUYING INCOME				RETAIL SALES				BUYING POWER INDEX	
PROVINCE S&MM Metropolitan Area	12/31/78 Total Pop (Thous.)	12/31/83 Total Pop (Thous.)	% Change 1978–1983	12/31/83 Total Households (Thous.)	% Change 1978–1983	1983 Total EBI ($000)	% Change 1978–1983	Average Household EBI 1978	Average Household EBI 1983	1983 Total Retail Sales ($000)	% Change 1978–1983	Retail Sales Per Household 1978	Retail Sales Per Household 1983	1978	1983
	1		2	3	4	5	6	7		8	9	10		11	

1 Updated from 1976 population census. **Total Population** is a head-count estimate of all **persons** living in the market at the end of the year. Includes the institutional population living in group quarters such as colleges and hospitals, and armed forces personnel (and their dependents) permanently stationed in the area; excludes tourists and transients. The 1983 projection is a straight-line projection based on the assumption that trends of recent years will continue.

2 Percent change between 12/31/78 and 12/31/83. The earlier year is the base period. A minus sign indicates a decline.

3 Households are units made up of families or unrelated individuals occupying a house, an apartment or other group of rooms, or a room regarded as a housing unit under the 1976 population census rules. The members of a household need not be related, and a single person living alone is also counted as a household. The 12/31/83 projection is based on population trends that will affect household size. After estimating average household size in 1983, this figure is divided into projected population to get expected number of households.

4 Percent change in the number of households between 12/31/78 and 12/31/83. The earlier year is the base period. A minus sign indicates a decline.

5 Expressed in **Canadian dollars, Effective Buying Income (EBI)** is a classification exclusively developed by Sales & Marketing Management. It is personal income less personal tax and nontax payments. Personal income is the aggregate of wages and salaries, other labor income (such as employer contributions to private pension funds), proprietors' income, rental income (which includes imputed rental income of owner-occupants of nonfarm dwellings), dividends paid by corporations, personal interest income from all sources, and transfer payments (such as pensions and welfare assistance). Deducted from this total are personal taxes (federal, provincial, and local), nontax payments (such as fines, fees, penalties), and personal contributions for social insurance. The resultant figure is commonly known as "disposable personal income." Market Statistics, the research division of Bill Communications that prepares the *Survey* data, removes from this figure compensation paid to military, diplomatic, and business personnel stationed overseas to arrive at Effective Buying Income.

Effective Buying Income is a bulk measurement of market potential. It indicates the general ability to buy and is essential in comparing, selecting, and grouping markets on that basis. But for products that appeal to specific income classes, the percent of households by Effective Buying income groups, as reported in the July 23rd *Survey of Buying Power*, should be considered.

6 Percent change in total EBI between 1978 and 1983, with 1978 as the base year, of a market's total EBI. A minus sign indicates a decline.

7 Average Household Effective Buying Income is calculated by dividing the number of households into the total (EBI). Often used as an indicator of market quality, but it can be misleading, particularly in areas where there is a disproportionate share of college, military, and other types of institutional population housed in group quarters not considered households. Because the EBI of the institutional population is included in a market's total EBI, and such persons are not included in the household count, this in effect makes the average artificially higher than the average income of the actual households.

8 Total retail sales, updated from the 1971 retail trade census, are expressed in **Canadian dollars** and are net sales (minus refunds and allowances for returns) of stores engaged primarily in retail trade. Sales taxes collected from customers and receipts from repairs or other services are included. On the other hand, retail sales by such nonretailers as wholesalers and service establishments are not counted. Although retail sales are often used to gauge the purchasing power of the residents in a market, they are only an approximation because the market's volume may be affected by the movement of shoppers to and from adjacent areas, as well as by the purchases by nonhousehold units such as businesses and by the inhabitants of group quarters. They are actually a measure of the drawing power of local retail establishments.

9 Percent change between 1978 and 1983, with 1978 as the base year, of a market's total retail sales. A minus sign indicates a decline.

10 Retail Sales Per Household is a mathematical average calculated by dividing the market's total households into total retail sales. However, it should be used with caution because retail sales can include purchases by nonhousehold units within the market (such as businesses and residents of group quarters) as well as by households not domiciled within the market.

11 Buying Power Index (BPI) is a weighted index that converts three basic elements—population, EBI, and retail sales—into a measurement of a market's ability to buy, and expresses it as a percentage of the Canadian potential. It is calculated by giving a weight of 5 to the market's share of total Canadian EBI, 3 to its share of total Canadian retail sales, and 2 to its share of total Canadian population. The total of those weighted percents is then divided by 10 to arrive at the BPI. However, depending upon what your research has revealed about buyers of your products, you can construct your own customized BPI by using any of the factors contained in the tables and assigning to them what you think are relevant weights.

If the *Survey of Buying Power* is important to your work, you owe it to yourself to see and evaluate the new 1979 *Survey of Buying Power* DATA SERVICE. For more information, see the brochure in this magazine.

The incredible steam clock in Vancouver's Gastown area

Make time in Vancouver with the basic media buy

If you're taking a hard look at advertising costs and trying to eliminate non-essential media, you'll find a clear choice in Vancouver. Because here in the West's biggest market, one media buy effectively covers every segment of the population. That buy is the Sun and the Province. Together, these two great newspapers reach 74% of the 376,100 households in the metropolitan Vancouver area. That means solid penetration of every age and income level, every interest group, every corner of this vast and complex market. To sell anything to anyone in Vancouver, make sure you start with the Sun and Province. They're the basic media buy.

THE SUN - THE PROVINCE
2250 GRANVILLE STREET VANCOUVER B.C.

Representatives TORONTO Manager R. C. Boyd, Suite 1602, 1 Yonge Street. MONTREAL Manager M. Benison, 226 Shell Tower Building. U.S.A. Cresmer, Woodward, O'Mara & Ormsbee Inc., New York, Chicago, Detroit, Boston, San Francisco, Los Angeles, Atlanta, Philadelphia, Dallas, Seattle and Minneapolis

When you've got something to say to Toronto, say it in The Star

If you haven't considered Toronto as a prime target market for your product, consider this. Toronto is the largest city in Canada with a population of 2.9 million people, and still growing. It's Canada's commercial and financial centre. In 1978, it generated 8.8 billion dollars in retail sales — that's about 13.1 per cent of Canada's total retail business activity.

In fact, Metro Toronto ranks 12th in the importance as a North American target market*. And that should mean a lot to you.

To get to this major market, get your message in The Toronto Star. It's the economical and immediate medium to choose. You'll see why when you look at the alternatives.

More than 16 TV stations or cable programs are available to Torontonians. So are 35 AM and FM radio stations. There are three independent daily newspapers. But there is no other individual medium which gives advertisers such an effective reach of your potential buyers in the Toronto market as does The Star.

Take a look at the facts yourself. The Star's Monday to Friday circulation places it up there with the top 15 North American daily papers. And here's the breakdown.**

	Monday to Friday	Saturday	Sunday
C.M.A.	394,611	582,422	227,783
All other	94,635	201,416	82,753
	489,246	783,838	310,536

So if you have something to sell in Canada's most dynamic marketplace, The Star should mean a lot to you.

SALES & MARKETING MANAGEMENT

NOVEMBER 12, 1979
A BILL PUBLICATION
TWO DOLLARS

Inside Out

Warner-Lambert groups all prescription-drug marketing in its new Parke-Davis Div. Page 10.

The racquetball craze creates an instant market. Page 14.

On your mark. Olympic promotions are off and running. Page 16.

Hirsch U.S.A. secures its hold on a choice segment of the watchband market by using systems selling and a mostly female sales force. Page 39.

Sales Strategies. A new S&MM department by contributor Mack Hanan argues that, in setting sales objectives, marketers can get their best ideas from customers. Page 82.

The Frost Belt warms up. S&MM's latest projections show the Northeast and Midwest regaining population by 1983. Page 100.

S&MM

TABLE OF CONTENTS NOVEMBER 12, 1979

What's coming up

Special Report on the 1980s. A detailed look at emerging trends in both industrial and consumer markets. Also, a gallery of predictions about what's in store for every major function of sales and marketing. Dec. 10.

S&MM's Awards Issue. Companies to receive S&MM's Grand, Distinguished, and Excellence awards for outstanding sales or marketing achievements in 1979 will be profiled in our Fifth Annual Awards Issue. Also to be cited then: the man or woman who had outstanding impact on the marketing world this year. And the 100 winners of S&MM's popular Business Executives' Dining Awards competition. Jan. 14.

Selling by celebrities. You see them in ads, but some of the best work by sports personalities and others is being done at sales meetings. Some even go on customer calls. Feb. 4.

Audiovisuals. AV selling aids continue to grow in importance in such areas as training, meetings, and sales presentations. Here's a guide to the latest hardware on the market and how best to use it. Feb. 4.

Address all manuscripts and correspondence relating to editorial matters to The Editor, Sales & Marketing Management, 633 Third Ave., New York, N.Y. 10017.

Because S&MM is almost totally staff written, only a very small number of contributed articles can be accepted for publication. For that reason, contributors are urged to submit an initial query along with an outline.

All unsolicited manuscripts must be accompanied by a return envelope with sufficient first-class postage. We regret that those arriving without such postage cannot be returned.

SHORT TAKES

10 Sales reorganization / **Parke-Davis changes its formula**
10 New products / **Great times at Roach Motel**
11 S&MM Barometer / **A 'down' trend in field selling costs**
11 Media / **A pitch to conventioneers**
13 **'Where' stakes a new claim**
13 Incentives / **Watch those prices**
14 Franchising / **Looking for bargains at retail**
14 Leisure market / **This craze is off the wall**
16 Sales meetings / **Nowhere to go but up**
16 Sales promotions / **The Olympian sell**
20 Motivation / **Paying for priorities**
24 **Those inflation blues**
24 Developing markets / **Save-Way eyes a beautiful world**
27 Regulatory agencies / **Now hear this**
28 Pricing / **It was cheap while it lasted**
29 Special Report Preview / **Marketing in the 1980s**

FEATURES

35 Rebuilding American Biltrite
Boston Industrial Products, Biltrite's biggest division, upgrades its field sales effort to push profits higher still.

39 Hirsch gets its 10 precious minutes
A systems sell and a mostly female sales force help Hirsch convince jewellers to take its product from under the counter.

41 Sales compensation: **There has to be a better way**
A shocking number of managers don't like the sales compensation plans they use, but they won't change them.

44 Designer labels: ***Next?**

Black Flag's success, notes Roach Motel assistant product manager Wayne Shealy, is largely because it, too, treats the product with humor—the motel variety. A TV commercial, created by C.T. Clyne Co., New York City, shows a husband reassuring his roach-weary mate that roaches that check into a Roach Motel "don't check out!" Similarly, transit ads show a male roach leading a female companion into a Roach Motel, a leer on his face. The humorous possibilities of Roach Motel have been played on by TV's *The Tonight Show* and *Saturday Night Live*, further building consumer awareness.

This year, the dozen or so companies marketing the traps will reap about $10 million in sales. Shealy notes that his product will soon be sold in Canada and possibly in other countries. But he refuses to predict what will happen to Black Flag's roach sprays as Roach Motel makes it big.

MEDIA

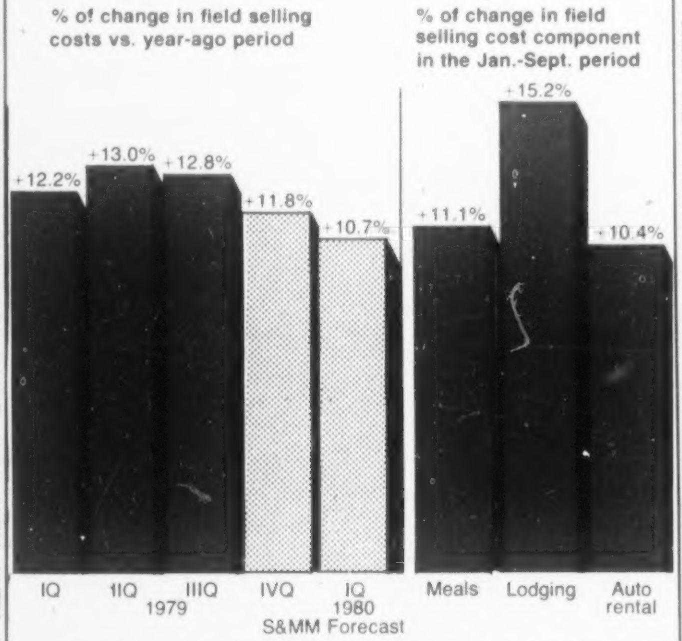
A pitch to conventioneers

The double whammy of recession and inflation will make more business travellers tie their vacation plans to their convention activities, claims Robert Simon, publisher of *Westword*, Denver's popular (circulation: 50,000) "alternative weekly (S&MM, March). Sensing an opportunity for sales, 22-year-old Simon will introduce in December a quarterly magazine, *The Conventioneer,* aimed exclusively at those attending Denver's conventions.

Because trade shows held in Denver must be booked two years in advance, gauging the number of attendees each quar-

S&MM BAROMETER

At long last, A 'down' trend in field selling costs



For a change, here's some good news: the rise in the aggregate cost of meals, lodging, and car rentals will recede slightly from an estimated 12.8% in the third quarter to 11.8% in the fourth quarter. What's more, the aggregate rise will drop to 10.7% in 1980's first quarter.

The reversal is indeed welcome. In the first nine months of 1979, field selling costs shot upwards by 12.6%. Lodging was the biggest culprit as hotel rates surged ahead by 15%. The costs of restaurant meals, up 11%, and car rentals, up 10%, were almost as hyperactive from January through September.

The "down" trend in field selling costs increases was predicted in S&MM's August Barometer, although its pace has been slower than hoped for. But in a year like this one, even the smallest favor is appreciated.

Note: Data shown are not directly comparable with the August Barometer because that Barometer was based on both seasonally adjusted and unadjusted indexes; this Barometer uses seasonally adjusted indexes only.

MANAGERS ON COMPENSATION PLANS

There has to be a better way

A survey of S&MM readers shows that a significant number—one in three—of the people who create or administer sales compensation plans are still looking for The Answer. Consultants John Barry and Porter Henry, who conducted this survey, report that those managers admit that their compensation plans come up short in such basics as guaranteeing maximum profitability or sales force performance. But despite open dissatisfaction or serious doubts about the merits of their pay practices, many of those managers are unwilling or unable to do much to change the situation, say Barry and Henry.

Studied were 449 questionnaires from manufacturers, wholesalers, distributors, independent sales representatives, and service companies. The results, which will also appear in a forthcoming book, *Effective Sales Incentive Compensation*, being completed by Barry and Henry for McGraw-Hill Book Co., appear here:

MANUFACTURERS

Plan Being Used	*% Using It*	*% Of Users Satisfied With Plan*	*% Dis-satisfied*	*% Uncertain Or No Answer*
Salary plus incentive	66.3%	53.1%	32.2%	14.7%
Commission with draw	0.8	82.6*	17.4*	—
Commission only	14.2	80.0	8.6	11.4
Straight salary	18.6	50.0	43.5	6.5

Number responding: 249.

*Indicates a small sample—a breakdown of 10 or fewer.

Reasons most frequently given for satisfaction or dissatisfaction:

Salary plus incentive

Reasons for satisfaction: improved performance (18% of respondents), fairness to both sides (17%), ease of budgeting (12%), secure income, fixed costs, better control of salespeople.

Reasons for dissatisfaction: incentive payments not large enough to motivate (18%), hard to administer, not tied to profit, low income in a bad year.

Commission

Reasons for satisfaction: known costs, no ceiling on salespeople's income, fair to both parties.

Reasons for dissatisfaction: little control over salespeople, uncertain income, "they won't travel in dull times," take on other lines, difficulty of starting a new salesperson.

Straight salary

Reasons for satisfaction: regular income for salespeople (38.8%), fixed sales costs (16.7%), better control of salespeople (11.1%), ease of budgeting, understandability of plan, ease of administration.

Reasons for dissatisfaction: lack of motivation (57.9%), inflexibility, absence of performance yardsticks, incomes not tied to profits.

SERVICE COMPANIES

Plan Being Used	*% Using It*	*% Of Users Satisfied With Plan*	*% Dis-satisfied*	*% Uncertain Or No Answer*
Salary plus incentive	52.0%	65.4%	34.6%	—
Commission with draw	10.0	80.0*	—	20.0%*
Commission only	14.0	71.4*	28.6*	—
Straight salary	24.0	41.7	58.3	—

Number responding: 50.

*Indicates a small sample—a breakdown of 10 or fewer.

Salary plus incentive

Reasons for satisfaction: high pay for good performance (37%), motivation (21%), combines security with motivation (19%).

Reasons for dissatisfaction: incentive not large enough to motivate, unfairness caused by variations in territories and accounts.

Commission

Reasons for satisfaction: high earnings for good salespeople, motivation, simple, lower sales costs.

Reasons for dissatisfaction: lack of control, "short-range viewpoint" by salespeople, turnover, difficulty with new hires.

Straight salary

Reasons for satisfaction: stable income for sales force, ease of administration, easier recruiting.

Reasons for dissatisfaction: lack of motivation (almost unanimous).

WHOLESALERS AND DISTRIBUTORS

Plan Being Used	*% Using It*	*Users Satisfied With Plan*	*% Dis-satisfied*	*% Uncertain Or No Answer*
Salary plus incentive	43.2%	72.7%	22.7%	4.6%
Commission with draw	25.8	62.5	31.2	6.3
Commission only	13.3	76.7	17.6	—
Straight salary	7.3	55.6*	44.4*	—

Number responding: 124.

*Indicates a small sample—a breakdown of 10 or fewer.

Salary plus incentive

Reasons for satisfaction: motivates salespeople (27% of respondents), salespeople can make large earnings (25%), salespeople stress the profitable products (7%), security, easy to understand, low turnover.

Reasons for dissatisfaction: ceiling on earnings reduces motivation (21%), keyed to volume instead of profits (15%), administrative costs (9%), difficulty of setting quotas or objectives, fluctuations in income.

Commission

Reasons for satisfaction: motivation (38%), large or unlimited earnings (29%), controlled sales costs (11%), increased profits, salespeople more profitminded, low producers cost little.

Reasons for dissatisfaction: lack of control (25%), differences in territories cause unfairness (17%), inadequate income in bad times (16%), inadequate income to marginal producers, difficulty with new hires.

Straight salary

Reasons for satisfaction: known costs to company and known income to salespeople.

Reasons for dissatisfaction: lack of motivation (almost unanimous), high sales costs when sales are low.

What the authors say . . .

It is surprising that more than one-third of the responding companies are either dissatisfied with their compensation plans or undecided about their merits. (About three-fourths of those using commission plans are satisfied with them, compared with 65.2% satisfied with their salary-plus-incentive plans and only 45% with straight salary plans.)

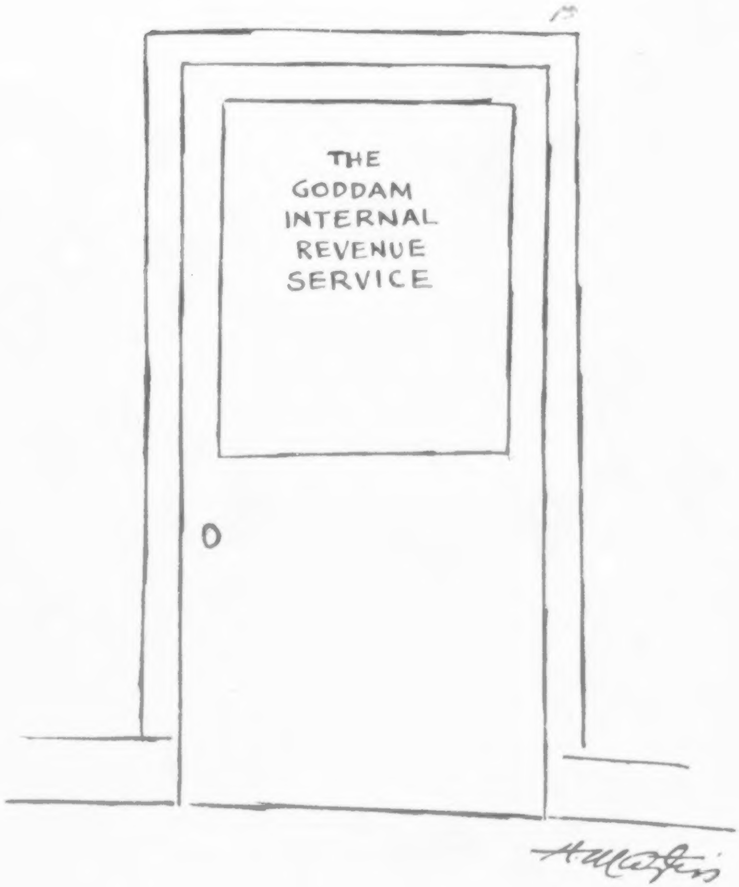
Why aren't those who are unhappy doing something about it? Some probable answers are:

1. The plan is entrenched in industry tradition, thus hard to buck.
2. There is difficulty in assigning credit for a sale when various salespeople, sales offices, or company departments participate in making it.
3. There are complicated financial or product-line considerations.
4. There is a failure to recognize that an *appropriate* compensation plan can enhance profits.

We discovered that although nearly every company's compensation plan can be designed to improve the profitability of the product-mix being sold, one-third of the respondents have never asked themselves seriously if some change in how they reimburse salespeople could actually increase profits.

Some further conclusions drawn from the survey:

- It is noteworthy that 12 respondents say that their salary-plus-incentive plan promotes the sale of their profitable items or encourages full-line selling. Note: That is true only if the plan is designed with such objectives in



Copyright, Sales & Marketing Management

mind—an incentive based on dollar volume alone will encourage emphasis on the products easiest to sell.

- The disadvantage in a salary-plus-incentive plan for many is that the incentive payments are usually too low to motivate the sales force to additional effort. Even some who are satisfied overall with their salary-plus-incentive plans admit that their incentives are probably too low to achieve the desired degree of motivation. (See above for the reasons why these companies are not changing that situation.)
- There is evidence that as inflation pushes incomes into higher tax brackets while reducing purchasing power, some incentives that may have been adequate only a few years ago aren't doing the job today. One respondent's observation is applicable here: incentive payments that don't produce results are "simply an added expense."
- A significant number of respondents are unhappy because their incentive payments are not related to the profitability of the products sold.
- A traditional advantage of straight salary plans remains true today: the high degree of control over the sales force that they allow. Because their incomes are not affected, salespeople are willing to follow instructions to attain the company's immediate as well as long-range goals, perform desired selling functions, and carry out nonselling support activities.
- Another "rule" of compensation supported by the survey: Salespeople paid straight salary simply tend to lack motivation. "Lack of incentive" afflicts salespeople in this compensation category far more than in any of the others.
- There is a strong tendency to overuse sales contests to bolster straight salary plans.
- Managers using commission plans say they like them because, naturally, sales costs decrease when sales do, and because they tend to generate the greatest motivation.
- Those disliking commission plans cite as a major reason the lack of control over the sales force. Respondents also criticize them because they encourage concentration on immediate orders, resulting in over-selling, and they prompt the salesperson to sell what is easiest to sell. Another disadvantage: the sales force is likely to "high spot" territories for the quickest or biggest sales. ■

S&MM SALES & MARKETING MANAGEMENT SPECIAL REPORT

The Marketer's Complete Guide To The 1980s

- How to sell
- Where to sell
- Who to sell
- When to sell

For marketers, the new decade will be one of the most challenging, and it could be one of the most prosperous (albeit after a slow start). That's why S&MM devotes the feature section of this issue to a **Special Report** on changes that spell opportunity in the 1980s.

Inside Out

Promotional takeoff. The latest phase of deregulation could mean that airlines will (1) drop their one-commission-fits-all policy for travel agents and (2) jump into cooperative advertising. Pages 10 and 69.

Industrial distribution. Globe Albany Belting sets out to cut the number of its distributors from 550 to 120. Object: profits. Page 10.

Buxton gets with it. The leather-goods marketer expands its marketing department to make the most of the information from its sales force. Page 13.

Viceroy's class. Brown & Williamson introduces a sweepstakes designed to popularize the cigarette's "rich taste." Page 19.

French? Cheap? Somerset Wine Co. launches a line named for wine expert Alexis Lichine. Target: the $4-a-bottle crowd. Page 21.

Latino market. The number of Latino families in the middle- and upper-income brackets has more than doubled. Page 63.

Complete Contents, Page 5.

S&MM's ANNUAL AWARDS

Companies will be honored for outstanding sales and marketing achievements in our next issue and at a luncheon on Jan. 17. Special guest: media maverick Ted Turner. Page 23.

S&MM

TABLE OF CONTENTS DECEMBER 10, 1979

What's coming up

S&MM's Awards Issue. Companies to receive S&MM's Grand, Distinguished, and Excellence awards for outstanding sales or marketing achievements in 1979 will be profiled in our Fifth Annual Awards Issue. Also to be cited then: sports and communications personality Ted Turner, recipient of S&MM's Special Citation for aggressive marketing. And the 100 winners of S&MM's popular Business Executives' Dining Awards competition. Jan 14.

Selling by celebrities. You see them in ads, but some of the best work by sports personalities and others is being done at sales meetings. Some even go on customer calls. Feb. 4.

Audiovisuals. AV selling aids continue to grow in importance in such areas as training, meetings, and sales presentations. Here's a guide to the latest hardware on the market and how best to use it. Feb. 4.

Test marketing. A list of the favorite test markets used by major consumer-goods companies—and why. Also, case histories demonstrating how testing is carried out. Mar. 17.

Address all manuscripts and correspondence relating to editorial matters to The Editor, Sales & Marketing Management, 633 Third Ave., New York, N.Y. 10017.

Because S&MM is almost totally staff written, only a very small number of contributed articles can be accepted for publication. For that reason, contributors are urged to submit an initial query along with an outline.

All unsolicited manuscripts must be accompanied by a return envelope with sufficient first-class postage. We regret that those arriving without such postage cannot be returned.

SALES COMMUNICATIONS

The Darome Connection

Each boost in travel costs makes Susan Pereyra's job easier. Pereyra directs the Darome Connection, a service that lets companies get together with their far-flung employees via a single telephone call. Sales have increased significantly since June 1978 when Roche Laboratories was the first to use the Connection to allow 800 salespeople scattered at six regional sites to "attend" the same "meeting."

Executives at Darome, Inc., a Harvard, Ill., sound-systems manufacturer, insist that their idea is an improvement over AT&T's conference call service that requires that all parties be connected beforehand. With Darome, companies reserve a regular time slot, but individuals can patch in at any time by dialling direct. Also, "a regular call can get unwieldy even with six or seven persons," Pereyra says. "We can accommodate up to 60 speakers because the system is voice-activated. Only one person can speak at a time." The claimed advantages

Keeping callers in line: Darome's director Susan Pereyra.

Marketers who are hoping for steady growth in the economy (it's in the cards for the 1980s; see this issue's Special Report) won't find many signs of it at retail checkout counters anytime soon. Retail outlets will show only a modest 8.1% rise, to $952 billion next year, vs. the 10.3% gain that is expected this year. Moreover, that increase is actually a decline in real terms because most economists expect that the consumer price index will cling to a 10% level.

As a result, inflation will continue to seriously erode purchasing power into 1980. Because new-car sales are sensitive to personal income levels, volume will fall 14%. That will affect retail totals because, next to food, the automotive sector siphons off the biggest chunk of consumer spending. Also, housing starts will drop 18% to 1.4 million. The victims: the general merchandise, home-furnishings, and major appliances sectors.

A cautious decade ahead

Each decade puts its hallmark on the marketing environment. The somnolent 1950s, the soaring 1960s, the troubled 1970s—each had its own tempo and character. The 1980s will be no different. The decade, of course, will be made up of continued trends from earlier decades and the emergence of new ones, but its character will be mostly shaped by conservatism fed by fear of inflation, energy shortages, and other crises. Call it the Cautious 1980s.

Despite the poor advance billing the 1980s have already been given, they will in fact offer marketers more than the usual number of opportunities. What it will take is shrewdness to sight those opportunities in advance, agility in changing marketing strategies accordingly, and skill in exploiting them as they come into play. Equally important, the marketer who is armed with knowledge of the individual problems to be faced in the 1980s will be in a stronger position to blunt their impact by using the correct countermeasures.

Specifically, what changes will occur in the next decade? The 1980s will see major—and varied—demographic alterations; the U.S. population is in flux, both in its migratory habits and its mix of age groups (as people move through the stages of the life cycle, their buying power changes, as well as their wants and needs). New markets will emerge as others decline or disappear completely (an example of the former is home video products, an example of the latter are many segments of today's youth market). There are major changes ahead in consumer sentiment and behavior, and important innovations in retailing.

Also, rising costs will dictate new trends in sales meetings, shows, and conventions (some are already evident). Time and territory practices will be revamped, sometimes completely, as companies try to cope with costs and energy constraints. Regardless of which candidate wins next year's presidential election, startling events will take place in Washington affecting consumerism, individual industries, product safety, and those who want to sell abroad. New assignments are in store for the computer. Another arena of sweeping changes: the media and, possibly, co-op allowances. Population changes will also affect the availability of sales personnel and the career paths of managers themselves.

Those and many other coming changes are examined in the pages that follow. Virtually every aspect of sales and marketing is covered.

Armed with advance knowledge of what is in store for them and how they can best respond to it, marketers thus will have an advantage against the future, and the best chance for ensuring consistent, strong growth in both sales and profits.

—THE EDITORS

MARKETING IN THE 1980s

We the people: Older, smarter, liberated, richer

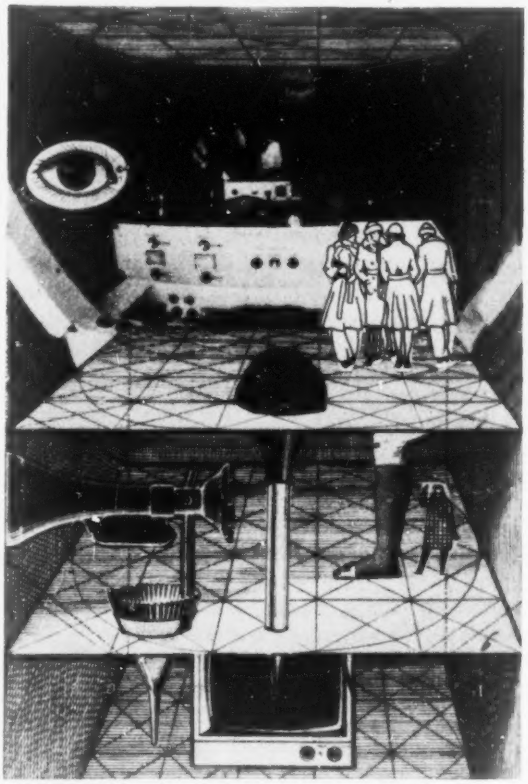
By THAYER C. TAYLOR
Senior Editor/Management Sciences

Markets in the 1980s will be reshaped by the reverberations of the postwar baby boom, the same powerful creator of growth that largely determined marketing opportunities for the last 30 years. The generation that created mass markets for goods and services oriented to infants in the 1950s, teenagers in the 1960s, and young adults in the 1970s, will become the middle-aged in the 1980s and one of the most important sales targets ever.

Overall, the total population will increase by some 25 million, or 11%, between 1978 and 1990, according to the Census Bureau's baseline projection. That's slightly more new consumers than currently live in the three biggest metropolitan markets—New York, Chicago, and Los Angeles-Long Beach—and it dwarfs the 14 million increase that has occurred since the start of the 1970s. On an annual basis, growth will edge up slightly, to 0.9% in the 1978–90 period, compared with 0.8% between 1970 and 1978.

Of significance to marketers scanning the horizon for growth markets will be the dramatic shifts among the age groups. Those are the critical planning inputs to marketers because as people move through the age cycle their buying power, wants, and needs change. The most significant age group changes that will dominate the 1980s are:

- **The middle-aged 35–44 year olds,** a high-income, free-spending group, which will be the fastest-growing market throughout the decade. Its numbers will expand by 5.8 million, or 50%, vs. an all-U.S. gain of 11%. The group's meteoric growth will signal the end to the youth-oriented marketing that has held center-stage throughout the postwar years. "Don't trust anyone over 30," the rebel cry of yesteryear, will be replaced by "Don't trust anyone under 40."
- **The elderly,** those 65 and older, whose ranks will swell by 5.8 million, or 24%. However, marketers should note that the two distinctive segments of that market will increase at different rates—the 75 and older up 32%, the 65–74 year olds 19%.
- **Teens and young adults,** whose numbers will dwindle dramatically, reflecting the long slide in birth rates since the late 1950s. The 14–17-year-old group will suffer a loss of around 3.9 million, or 23%, between now and 1990, the 18–24-year-olds a similar drop-off of 3.8 million, or 13%.



Other age groups will experience various twists and turns during the upcoming decade, emphasizing the need to continually monitor demographic shifts:

- The 25–34 year olds will register strong gains—5.3 million, or 16%—in the 1978–84 period, then decelerate to a 1.9 million gain, or 5%, for the balance of the decade.
- The 45–54 year olds will become a smaller market in the first half of the decade—shrinking by 0.7 million, or 3%—before expanding 2.9 million, or 13%, in the second half.
- The number of children under 14 will post a middling 0.8 million gain, or 2%, between now and 1984, then surge ahead with a 4.4 million increment, or 9%, in the decade's balance. That, of course, assumes a baby boom will develop in the mid-1980s, a forecast that doesn't have universal support.

The key household trends that will affect markets in the 1980s are:

- **A slower overall growth,** reflecting the numerical decline in the 18–24 age group, the primary years when new households are formed. Compared with an average annual increase of 2.5% since 1970, household growth in the years ahead will dip slightly to 2.4% a year in the 1978–84 period, then slow down even more to 1.9% in the remainder of the decade. Even so, there'll be 20.7 million more households to sell to in 1990 than today.

- **Nonfamily units will grow** at a faster rate than the conventional family unit, mirroring the greater interest in alternative living arrangements. They'll expand 52%, or by 9.8 million, compared to only 19%, or 10.9 million, for the family households.
- **Within the family sector, the one-spouse home will grow** more than three times as fast as the conventional husband-wife unit—45%, or 4.3 million, vs. 14%, or 6.5 million. That will be a byproduct of the greater willingness of unhappily married couples to separate.
- **The feminist drive for greater self-fulfillment will strongly color** the future household profile. Female-headed households, including both family and nonfamily types, will increase by 4.5 million, representing a 43% growth vs. 27% for all households.

Here is a closer look at those broad trends and related demographic shifts.

The changes in households

Despite the slower overall household growth in store for marketers, the shifting age makeup of households during the 1980s will provide a strong underpinning for booming sales. The two household age groups that will chalk up the most impressive growth rates in the 1978–90 period—62% by the 35–44-year-old bracket, 36% by the 25–34 segment—rank high on the income and spending scales.

Households in the 35–44 range have a median income that's 25% over the all-household average and is second only to the 45–54-year-old group. Furthermore, 21.3% of all personal income is located in these consumer units.

Median income of the 25–34-year-old households is just about average. However, because of their sheer numbers they pull down a slightly bigger 22.3% of total personal income. Together, these two age groups account for 44% of household money income.

The importance of the changing age makeup of households to marketers is even more significant when it comes to buying goods and services. The 35–44 and 45–54 year olds are the most lavish spenders, each ladling out 27% more on goods and services than the typical domicile. Significantly, the 25–34-year-old segment, despite its average income, is the next biggest buying unit, an achievement largely due to its free use of credit.

Altered lifestyles

Changes in types of living arrangement, reflecting the emphasis on "do your own thing," will affect target markets in the 1980s. Nonfamily domiciles, which increased their proportion of all households from 19% to 25% during the 1970s, will continue to widen their share in the next decade. According to Census Bureau projections, family-type units will recede from a 75% share currently to 70% of all households in 1990.

The U.S. family

Even so, the family, representing some 68 million buying units by 1990, will remain the dominant market target.

With married couples preferring fewer children, and young adults putting off marriage to a later period, households will continue to shrink in size. Government projections see the average family size slimming from 3.3 persons in 1978 to 3.0 in 1990, the average household from 2.8 to 2.5 persons.

One-person domiciles and unmarried couples, which experienced meteoric growth in the 1970s, will increase in relative importance but at a sharply reduced pace because of unfavorable prospects of the two age groups most commonly associated with the two types. The 18–24 year olds will decline from 13.3% of the population to 10.4% between 1980 and 1990 while the 25–34 year olds will only increase their share from 16.3% to 17.0%.

Within the family sector itself, the one-spouse household will cut a wider swath, upping its share to one out of five such consumer units as against 13% at the start of the 1970s. However, its growth rate will decelerate sharply, from an annual 5.3% between 1970 and 1978 to 3.6% in the 1978–84 period and 3.4% in the 1984–90 time frame.

Women at the helm

Another nontypical household that will become a much more important market target in the next decade is the female-headed consumer unit. Its share of all households climbed from 21% in 1970 to 25.4% in 1978, and, according to Census Bureau projections, will continue to escalate to 28.5% by 1990. And there's a good chance the ratio may pass 30% if women continue to put off marriage to a later year or if divorce rates, which levelled off recently, begin to rise again.

Inasmuch as a large number of female householders will be combining jobs and parenting, they'll be an especially attractive market. A report by Management Horizons, Columbus, Ohio, a leading consultant in the retailing field, notes that retailers will have to extend store hours, as well as experiment with home delivery of bulky merchandise, to capture this market.

Household incomes

Helped along by the rapid growth of the 35–44 year olds who are nearing their career and income peaks, household income levels will move up handsomely in the 1980s. "The aging of the baby boom generation," a report by Data Resources (DRI), Lexington, Mass., a leading econometrics consultant firm, notes, "will mean fewer youths with their lower earnings and more adult consumers in the high earning age groups."

According to the Bureau of Labor Statistics, real disposable income (1972$), which is roughly equivalent to the *Survey of Buying Power*'s Effective Buying Income indicator, will rise 4.1% per year in the first half of the upcoming decade, 3.7% in the last half. That means that per capita real disposable personal income, which was $4,300 in 1977, will increase to $5,500 in 1985 and $6,300 in 1990.

An equally bright projection is made by the Joint Economic Committee, which sees median household income leaping from $15,191 in 1978 to $32,600 in 1988 (current $). That's a 115% rise, or slightly better than 11% per year, which is significantly above the 9% annual rate of the 1970–77 period.

According to DRI's long-term projections, the number of consumer units with incomes over $25,000 (1972$) will increase from 5.3% of all consumer units in the late 1970s to 7.3% in the late 1980s; the $15,000–$24,999 group's share will rise from 18.0% to 21.3%, and the $10,000–$14,999 group's ratio will show little change, 21.3% to 21.8%. The ranks of the under-$10,000 unit will drop from 54.8% to 49.6%.

Obviously, the steady march of households into the upper income brackets through the 1980s will make mass markets out of many of the "class" goods and services—such as exotic travel, expensive jewelry, and high fashion apparel—formerly affordable only by the rich. Also, while the aging of the population suggests a less hospitable environment for new products, the higher household incomes should be an offsetting factor.

A baby 'boomlet'?

Marketers of infant goods who have watched tumbling birth rates with dismay since the late 1950s can look for a happy turnabout in the upcoming decade. While there is considerable disagreement as to whether a baby boom will occur, there are powerful potentials in its favor.

Theodore J. Gordon, president of The Futures Group, Glastonbury, Conn., a forecasting company specializing in long-range studies, reasons: "It seems likely that almost as many babies will be born annually in the mid-1980s as at the peak of the first baby boom in 1960 (4.3 million) for two reasons.

"First, the fertility rate will rise slightly above its 1976 low because many women who have been delaying having children will decide 'now or never.' From a low of 1.8 births per woman in 1976, the rate appears to be increasing slightly to 2.1 or so.

Three population paths in the 1980s

	Total U.S. Population (000)		
	1980	*1990*	*% Growth*
Series I	**224,066**	**254,715**	**13.7%**
Series II	**222,159**	**243,513**	**9.6%**
Series III	**220,732**	**236,264**	**7.1**

In developing its population projections, the Census Bureau relies mostly on assumptions of future levels of "completed cohort fertility" (average number of lifetime births per woman). In Series I, it assumes 2.7 births per woman; Series II, 2.1; and Series III, 1.7. Sales & Marketing Management is using the Series II projections because it is closest to the findings of surveys on the number of children that women expect to have.

"Second, the number of women born in the 1950s, the height of the first boom, will be reaching childbearing ages in the 1980s. In 1960, there were 19.6 million women in the 18–34 age group; by 1985, there will be 33.9 million of them."

Of course, the big unknown is how many of those women will decide it's 'now or never.' Many observers feel that, having tasted the independence a job gives them and the self-fulfillment that a career offers, the women will opt for "never" rather than return to homemaking.

In any event, the baby boomlet will be dramatically different from its predecessor. According to the lifestyles studies program of Leo Burnett Co., the Chicago advertising agency, 63% of those in the 18–29-year-old group said they plan on 2.1 children compared with the three or four that was the norm in the 1950s.

Still, the upcoming baby crop will spell billions of dollars of sales opportunities for marketers. Management Horizons estimates that "over the first three years, the first-born children account for over $2,000 in retail sales. By 1990, this would account for a 40% increase over 1977, or an additional increment of retail sales—in real terms—of over $1 billion."

Minorities

Minority markets will become more attractive in the 1980s, but at the same time much more diverse. Because of their higher birth rates, blacks will increase significantly faster than the total population—17% vs. 11%. By 1990, there'll be 29.8 million blacks, as against 25.6 million in 1978, and they'll comprise 12.6% of the total population.

How life-cycle groups will change

Life Cycle		% Of Total Population 1970	1980	1990
0–5	**Preschoolers**	10.2%	8.6%	9.2%
6–12	**Preteens**	14.0	10.6	10.3
13–17	**Adolescents**	9.8	8.7	6.6
18–24	**Young adults**	12.1	13.3	10.4
25–34	**Peak family formation**	12.3	16.3	17.0
35–44	**Family maturation**	11.3	11.6	15.1
45–54	**Peak earning power**	11.4	10.2	10.5
55–64	**Childless parents**	9.1	9.5	8.6
65+	**Retirement**	9.8	11.2	12.3

Source: Merrill Lynch Economics, Inc.

As a market, blacks will become sharply segmented. There is, on the one hand, a relatively small, but consistently growing, group that is upwardly mobile, forging successful careers, moving into the higher-income classes, and leaving the central cities for the suburbs. On the other hand, there is still a large mass of those experiencing difficulty in building careers and breaking out from a low-income status.

Another major demographic change will be the growth in the Hispanic population until it rivals the size of the black population (of importance here will be expected agreements with the Mexican government to admit legally more Mexicans into the U.S.). As a result, the number of Spanish-language radio and TV stations, newspapers, and magazines will continue to grow and give marketers more opportunities to reach Hispanics. Already, the Spanish International Network, a leading Spanish-language TV programmer, reports that its nine-month ad revenues are up 60% over last year's.

The college educated

One of marketers' favorite sales targets, the college educated, will approach mass-market status in the 1980s. Marketers cotton to these consumers for a variety of reasons, such as their above-average discretionary income and yen for new products, but their appeal in the past was blunted by their limited numbers. This picture changed dramatically in the 1970s and will continue to do so in the 1980s.

Between 1970 and 1978, for example, the share of those 25 years old and older with some exposure to college shot up from 21.2% to 29.8%. Even more important, the share among the 25–34 age group, which will move into the key 35–44-year-old segment in the 1980s, rocketed upwards from 29.8% to 44.8%, a phenomenal 15-point increase. Also, greater numbers of high school graduates will enter college.

Four household paths in the 1980s

	Total U.S. Households (000) 1980	1990	% Gain
Series A	80,135	98,950	23.5%
Series B	79,870	96,653	21.0
Series C	79,704	96,792	21.4
Series D	79,349	92,394	16.4
Average of B&C	79,787	96,723	21.2

Four sets of household projections are developed by the Census Bureau. All four are based on the bureau's Series II population projections, but each is developed from different assumptions about the marital status of specific age/sex groups. After consulting with the Census Bureau, Sales & Marketing Management bases its household projections on an average of Series B and C.

What about inflation?

Its pressures will almost certainly mean many more multi-earner households. "A second income is almost essential if a family hopes to buy a home and some of the discretionary extras," says Peter B. Pekar Jr., director of business development, Quaker Oats Co., Chicago. "The latest findings of the Harris perspective service program show that the majority of people believe health insurance, telephone, car, life insurance, savings account, house, and yearly vacations are necessities. You can't satisfy those desires with a one-wage-earner household."

All market planning starts with population, and the demographic trends suggest that planning, with only a few exceptions, should be geared to the expectation of a steady growth in numbers throughout the next decade. ■

MARKETING IN THE 1980s

- How to sell
- Who to sell
- Where to sell
- When to sell

ADVERTISING

In industrial advertising, accountability is to be the byword in the 1980s. As top management gets mean about measuring advertisements' effectiveness, marketers will set specific objectives for their ad campaigns and attempt to find ways to measure that success—all before embarking on the campaigns. (A favorite method: position ads in media that provide *quality* responses instead of those that merely generate volume.) Meanwhile, in-house agencies will continue to replace outside ones, as they have done at GE and U.S. Gypsum. The technical nature of many industrial ads makes it easier and often less costly to companies to hire their own artists and copywriters than to try to communicate their needs to outside agency personnel.

• • •

One of the most significant demographic changes in the next decade will be the increase in the number of working women. The change will have a tremendous impact on advertising because advertisers will be trying to reach women who:

- Are no longer home in the daytime, and therefore don't watch daytime TV;
- Are more knowledgeable because of their exposure to consumerism;
- Have more money to spend, but less time in which to spend it. Advertisers will therefore have to reconsider both their media choices and the kinds of messages they send. However, because all consumers will be more sophisticated and more skeptical of advertising claims, the changes made will not be "for women only."

• • •

In keeping with the trend toward segmentation of target audiences, newspapers will offer a proliferation of special sections and inserts aimed at readers with specific interests in such things as sports, fashion, and travel. Computerized circulation will make it possible to vary the editorial and advertising content of the daily paper from household to household. Despite the proliferation of electronic information in the home, newspapers will retain their status as a tangible record, especially of local events. Enterprising publishers may even reposition their papers as "printouts" that, in addition to news, present features designed to be used with the electronic media. Example: worksheets for home-study courses broadcast on TV.

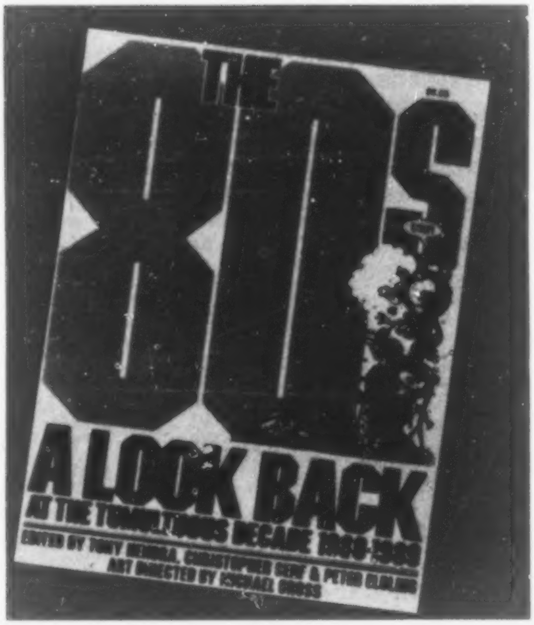
ANTITRUST

The Federal Trade Commission will weather current congressional attempts to impose a veto on rules lawmakers don't like. The same goes for moves to trim the FTC's appropriations until it promises to suspend several proposed rules. Actually, FTC leaders will approach the future more cautiously—especially avoiding launching massive lawsuits such as its marathon antimonopoly actions against oilmen, automakers, and breakfast-cereal marketers. Instead, in the 1980s the commission will stick mainly to its former role of policing fraud, price-fixing, and price discrimination.

NOTE

Want to learn more about a specific subject area? In many instances throughout this Special Report, additional aspects of a subject are found under a separate overline, sometimes several separate overlines. Example: In addition to the information about advertising trends in the 1980s that appears on this page, readers will find more of interest in other overlines such as Broadcast Advertising, Buying by Video, Catalogue Selling, Co-op Advertising, Outdoor Advertising, and Print Advertising. For this reason, we urge you to read this Special Report in its entirety.

Also, limitations of space makes it necessary for us to omit some subject areas entirely. We will remedy this in regular issues of S&MM in the coming year when we will continue our examination of the next decade. If you have a specific subject area in mind that does not appear in these pages, please tell us about it.



THE
80's
A LOOK BACK
AT THE TUMULTUOUS DECADE 1980-1990
EDITED BY TONY HENDRA, CHRISTOPHER CERF & PETER ELBLING
ART DIRECTED BY MICHAEL GROSS

> **In the 1980s, more than ever, decisions affecting the marketing of a consumer product will have to be right the first time. There will be little time to adjust strategies in the field.**
>
> Edward J. Spar
> President
> Market Statistics

BRAND MARKETING

A brand-new market for many brand-name marketers: so-called low-end retailers, such as J.C. Penney. The carrot is the incredible size of this retail segment; the stick is new government regulations and legislation forcing brand-name marketers to sell to one and all. As this occurs, department stores will experiment with private labels, to make what they sell at least seem to be distinctive.

BROADCAST ADVERTISING

Because working women watch less TV than housewives, marketers will have to determine which products directed at female consumers should be advertised on daytime TV and which should be on, say, drive-time radio. Good candidates for broadcast ads: cosmetics and personal products, which working women use much more heavily than housewives.

BUYING BY VIDEO

Enter the electronic catalogue. One example is Warner Communications' Qube system (S&MM, June 1978), operated since 1977 by the Warner Cable Div. in Columbus, Ohio. It allows customers to participate in "instant" surveys and request information on products merely by touching a button on the set. Although Qube has just expanded into Houston, difficulty in getting franchises and the system's high cost will keep the idea "dormant" until late in the decade. Salt Lake City's KSL-TV (S&MM, Sept. 17) is experimenting with newspaper-format TV programming, which will be complete with articles and advertising such as classified and supermarket specials. There's even talk of putting catalogues on videocassettes. Once the Federal Communications Commission gives the go-ahead to these and other experiments, in-home shopping will advance to the point where a customer who's received a catalogue or mailer will press a few buttons on the telephone and get programming on the TV screen that will supplement the information in the catalogue.

CALL REPORTS

Call reports are a vastly underutilized tool for developing market information, primarily because of the salesperson's reluctance to take the time to complete them. Special "mark-sense" cards that require only a pencil check in the appropriate boxes and which can later be "read" by optical character-recognition equipment will become widely used for developing daily information on price changes, shelf facings, competitive moves, and the like. They can also be used to quickly generate facts on the effects of special advertising or promotion campaigns.

CATALOGUE SELLING

Soon to be with us: "personal" mail-order catalogues. They'll help ensure higher sales per catalogue issue and cut mounting production and postage costs because they will be targeted to the addressee's own demographics and psychographics, ending the two major faults of today's "shotgun" approach. Mail-order houses will use computers to scan the addressee's history of credit card purchases, revealing if he or she is currently a heavy purchaser of, say, jewelry, recreational gear, or furniture, and in what price range, even styles preferred. The catalogue mailed out, including its covers, concentrates on those tastes. Another innovation: listing only the telephone number of the store or warehouse closest to the addressee's home to speed delivery.

> **Among the most significant changes in marketing research will be its application to major national issues that impact marketing. Examples: the effects of government regulation on business and the consumer, increased marketing productivity in an inflationary economy, and the need to compete more effectively in global markets.**
>
> Alden G. Clayton
> Managing director
> Marketing Science Institute

COLD CALLING

Since the energy crunch, some companies have eliminated cold calling, but it is too valuable a selling method for most managers and salespeople, who still will cherish it for the extra sales it promises. Thus salespeople will continue to cold call but under new rules designated to hold down travel costs and conserve gasoline in any shortages to come. Some of the rules: devoting entire days just to cold calls will be taboo; salespeople will do better preresearch to separate "wheat from chaff"; management will provide only carefully screened leads. Also, managers will play a bigger role in deciding who should get the call and when—salespeople's old freedom here is about to end.

COMPUTERS

Courses in computer programming will become part of the routine training of sales managers. Although programmers and program analysts will be on hand to help sales executives manipulate and analyze data, a basic knowledge of programming will help the field manager get quick readouts on the productivity and profitability of his field territories—and communicate more effectively with the home office.

◆ ◆ ◆

Lightweight, portable terminals will become as common with field sales personnel as the traditional display case. The terminals will be programmable so that the salesperson can execute statistical exercises for answers to buyer inquiries and demonstrate, within the parameters set forth by the buyer, the product's cost-effectiveness and other benefits. When linked to a computer via telephone lines, the salesperson will also use the terminal to give the buyer current information on the status of prior orders, probable delivery dates, and so on.

◆ ◆ ◆

Contrary to the popular impression, the energy crisis won't drive corporations back to the central city. In-

The Job Market

Fields of The Future

The New Employer

The Emerging Workers

The Job Search

Jobs: The Skills, Then the Place

stead, home terminals that give the user direct access to a company's information infrastructure will be used by managers to do part of their planning activities at home. Example: Much analytical work and budget preparation can be done at home because the terminal will enable the manager to pull the needed information from remote data banks.

◆ ◆ ◆

Greater use of computer-based programs that can be used away from the office will be made to counter escalating costs of sales training and management development. Computer-assisted instruction programs that can be used on home terminals will enable a user to take a course at his own pace and test himself on his progress. Similar programs will be offered by vendors in training courses for distributor sales personnel. To eliminate the time and costs of assembling reps from several distributors at a central location, a vendor will either offer or sell programs to distributors for use on their own premises.

CONSUMER SENTIMENT

Expect the better-educated consumers of the next decade to be less responsive to such claims as "new, improved" or "better than ever" and to look for documented proof of product performance. Furthermore, more-demanding consumers will be willing to pay for long-term quality and will have less interest in short-term bargains. The marketer who provides quality, durability, and practicality, and advertises those features intelligently, should come out well ahead of his competition. *Intelligently* is the key word, however. Consumers are losing patience with the ads—especially on TV—that talk down to them.

◆ ◆ ◆

The inflationary economy will force consumers to cut back in many purchasing areas, and, as this happens, the home will become the favorite object of expenditures, especially furniture and appliances. Notes Robert W. Darvin, president, Scandinavian Design, a 12-store home-furnishings retail chain based in Natick, Mass., "Inflation is pricing other American status symbols out of the market—but not the home. Also, retailers will focus on increasingly smaller population areas. Neighborhoods or regions with 25,000 to 100,000 people represent big home-furnishing sales." Another prediction Darvin makes: Stores will concentrate on increasing inventory turnover as manufacturers reduce delivery time. That will allow retailers to divert expense dollars previously tied up in inventory to marketing and promotion.

CONSUMERISM

The business lobby will continue to gain ground in Washington, D.C. However, it will also find itself up against COIN (Consumers Opposed to Inflation), made up of some 60 consumer-labor organizations, and one of the most skilled antibusiness groups yet. COIN represents a resurgence of consumerism—with different tactics. Previous consumer groups sought to get regulations and laws to balance what they said were inequities; COIN wants the government to limit corporations' size and make their ownership more "open." Their special targets: marketers of food, housing, energy, and health care.

◆ ◆ ◆

S&MM contributing editor Herb Denenberg notes, "The consumer wants some assurance that when there is a dispute over the performance or quality of goods or services, he will have a fast, efficient, and economical way to get that dispute settled. . . . At some point in the future, the consumer will get a label, instructions, and warranty along with a guarantee of how disputes with the seller can be settled when an impasse is reached."

◆ ◆ ◆

The most hotly debated consumer issue in the 1980s will be the federal government's attempts to develop performance label rating systems for high-ticket products. Efforts by the Dept. of Energy to produce

MARKETING IN THE 1980s

POPULATION

Population growth accelerates slowly

Age Group	1970 (000)	1978 (000)	1984 (000)	1990 (000)	Average Annual % Change 1970–78	1978–84	1984–90
Total	204,335	218,548	230,692	243,513	+0.8%	+0.9%	+0.9%

appliance energy-efficiency ratings and the Dept. of Transportation to rate tires by quality will run into a buzzsaw of criticism from regulated companies and consumers alike. Charges of "impractical" and "unworkable" will force other government agencies to rethink and retract several similar programs for other products. Consumers will be slower to accept product regulation programs to enhance safety. As inflation erodes more of disposable income, for example, look for vigilante groups of consumers to rise up against the Transportation Dept.'s $170-per-car mandatory air-bag program. Similarly, consumers will be split over the desirability of the Food and Drug Administration's program to require lay-language "patient package inserts" for most prescription-drug containers. Manufacturers and pharmacists say the leaflets will cost over $200 million a year and raise prescription prices an average of 15¢ each.

CO-OP ADVERTISING

The total amount of money spent on co-op advertising will increase, partly because airlines and other industries will use the medium for the first time. Also, suppliers will step up their efforts to ensure that their co-op money is spent more effectively. Two probable moves:

- Suppliers will use more specific reporting systems to verify that large retailers use their co-op money for actual advertising in measured media.
- To broaden the scope of co-op advertising, suppliers will try to increase participation by small retailers and even place ads for them.

> **During the coming decade less-traditional values will continue to grow in acceptance, largely because of the exposure—and approval—mass media gives them. Such fundamental institutions as the church, family, business, government, and schools have changed, even broken down in some cases. If some of these institutions rally, however, some people may go back to older values.**
>
> Donald LeSieur
> Senior vice president, marketing
> Block Drug Corp.

> **Rather than reducing the number of meetings in the 1980s, planners will deal with rising costs by shortening the average number of days per meeting and scheduling more program hours per day to compensate. Workshops will grow at the expense of stand-up speakers, and there'll be greater use of meeting specialists to achieve more productivity.**

COUPONS

Working wives will face increased time pressure and reduced-money pressure. Even though coupons will probably continue to be the most popular promotion tool, they will have to have a high enough value to make it worth the time to clip them, save them, and shuffle through them when making the shopping list. In addition, the use of coupons will mean continuing misredemption headaches for marketers, headaches that get even bigger as coupon values increase. One misredemption-control technique now used by Borden and Colgate-Palmolive, among others, is a two-part coupon that requires the consumer to affix an in-ad stamp that gives the coupon its value. Another possibility being tested is marking coupons with a brand's UPC code and using supermarket scanners to correlate coupon redemptions with purchases.

CUSTOMER SERVICE

Some of the more glamorous advances in customer service are already beginning to go on-line, especially EDI—electronic data interchange—including computer-to-computer order processing, and integration of home video and computer terminals into retail transactions. But those are essentially paperless and electronic ways of conducting business as it's been conducted. The *significant* advances will take a little longer because they involve fundamental changes in the way of doing business. Notes Warren Blanding, an S&MM contributing editor, "Mounting costs of field sales will force an increasing number of routine selling functions over to the customer service side where they can be performed more economically—and often more effectively—thanks to the availability of a variety of skills, and communications and transactions technologies. The unvoiced acknowledgment of the important difference between orders and reorders is beginning to be articulated. An example: One company's in-house computer tracks customers' inventory performance, projects demand, and generates reorders accordingly; what's significant is not the technology but the transfer of the reorder function from the customer to the vendor." The most effective interactive or computer-to-computer systems are similarly predicated on similar shifts in traditional patterns: preagreed pricing to facilitate automated ordering of items is an example. Says Blanding, "These shifts are not for the purpose of empire-building on the part of Customer Service; on the contrary, they recognize the critical importance of the sales function—and the necessity of increasing its productivity commensurate with spiralling selling costs."

DEREGULATION

Next in line after airlines to receive the fruits of deregulation are broadcasters. Congress will unshackle radio stations first. Although they'll continue to apply for periodic license renewals, radio broadcasters will be free from Federal Communication Commission rules affecting, for example, the amount of commercials and entertainment programs as well as the concentration of station ownership. Rules will remain, however, on such politically sensitive subjects as "fairness" and "equal time." If all that works, TV broadcasters can hope for similar treatment.

DISTRIBUTION

Have you thought about selling your product to a major retail chain? Watch for the chains to move into new areas of business as they find growth rates in some of their traditional merchandise lines levelling off. The rationale is that existing channels of distribution lend themselves in some instances to selling even markedly different items. One example is the "box store," featuring dry goods products; already, K mart, Jewel, and Aldi are testing or setting up such stores.

DISTRIBUTOR RELATIONS

The tender loving care marketers lavish on their distributors—the smart ones, anyway—will be stepped up in the decade ahead. More distributors will be offered (sometimes compelled to take) sales training for their people, with emphasis on product knowl-

How selling costs will grow

Massive increases are ahead in the costs of keeping a sales force in the field. Here are some of the field selling costs that marketers will be wrestling with by the year 1990:

	1978	*1990*	*% Gain*
Selling Costs Index (1971 = 100)	**186.6**	**524.3**	**181.0%**
One-week total for food and drink, lodging, and auto rental	**$462.83**	**$1,300.51**	**181.0**
Per diem expenses (meals and lodging)	**$ 46.40**	**$ 119.44**	**157.4**
Sales training (per salesperson)			
Industrial	**$15,479**	**$27,798**	**79.6**
Consumer	**11,338**	**25,535**	**125.2**
Services	**8,828**	**17,764**	**101.2**
Sales meetings (per person, per day)	**$69.76**	**$231.11**	**231.3**

In building these projections, Sales & Marketing Management paired the individual categories with related economic indicators. Selling costs index, per diem expenses, and sales meetings were matched to past and future expected trends in the consumer price index (CPI). S&MM makes the assumption that the CPI will have a compound annual growth rate of 7.0% per year in the 1980s. Sales training costs were assumed to increase 5% a year for industrial goods, 7% for consumer goods, and 6% for services. If you want to get an idea of what the totals might look like in 1990 dollars should our CPI forecast prove true, multiply each number by 2.25218 edge and sales techniques. Distributors will be included in more marketers' advertising programs and sales promotions and given more technical support. Also, distributor advisory councils will play a bigger role in supplier-distributor relations, and there'll be written mutual commitments to specific goals. (The Marketing Science Institute goes so far as to predict higher margins, especially for industrial distributors—but we've heard that one before.) In return, distributors will be expected to vastly step up developing their markets and building new accounts. No doubt about it, marketers in the 1980s will make distributors a far stronger partner in their selling and marketing efforts.

ETHNIC MARKETING

An important demographic change will be the growth in the Hispanic population until it rivals the size of the black population. As a result, the number of Spanish-language radio and TV stations, newspapers, and magazines will continue to grow and give marketers more opportunities to reach Hispanics. Already, the Spanish International Network, a leading Spanish-language TV programmer, reports that its nine-month ad revenues are up 60% over last year's. Also, marketers should think carefully before deciding that their products will not appeal to this ethnic group. With the exception of a few cultural preferences (Hispanics don't like peanut butter), the market offers wide opportunities. One company not intimidated by an ethnic crossover: American Home Foods, which advertises its Chef Boy-Ar-Dee Italian foods on Spanish-language TV.

FLEET CARS

Like most drivers, sales fleet users will have little choice in the face of rising gasoline prices and supply problems: most will have to cut back on driving. Thus they'll change the pattern of their calls, use the telephone and mails for routine calls, and drive the smallest, most fuel-efficient car that *meets their needs.* In the early part of the coming decade, there'll be plenty of small cars available and the sales fleets that need larger cars—for trunk room, passenger space, motivational or ego value to salespeople, and other reasons—won't be as scared of them as they are now. Expect also computer-assisted routing plans, drivers in golf-cart-sized "luxury" cars, and technological advances that open the door on, say, all-electric fleets for use in compact territories. Sound fantastic? So would have gasohol, three-hour gasoline lines, and prices of over $1 a gallon 10 years ago.

GEORGE
ORWELL

FIRST-LINE MANAGEMENT

The selection and training of first-line sales managers (those directly responsible for the activities of field salespeople or outside agents) will finally get the priority treatment they deserve. Reasons for the change are the recognition of the field manager's key role in hiring, training, and motivating salespeople and reps, and the huge increase in the volume of data the manager deals with.

INDUSTRIAL MARKETING

Sales executives will depend on (1) better-educated salespeople and (2) on-going training programs for the salespeople and managers so that companies can cope with faster change and the use of more outside sales reps. Those factors put a premium on territory management capabilities. But training won't be a one-way street. Look for more marketers to set up programs for their new hires wherein they will work for crack distributors and other outside sales agents to improve their knowledge of the marketplace. Also, a multiplication in the delivery and servicing options offered customers—and a corresponding variety of price options—will help to control rising costs. Example: Customers will pay for the level of service they desire. The need to improve production, sharpen promotion planning, and cut down the fast-rising costs of physical distribution will pressure management to make salespeople and reps better negotiators. Other trends: deals requiring customers to make deliveries earlier—when it's convenient for the supplier—and to share distribution costs, say, by providing the labor to unload, will become commonplace. Expect packaged-goods techniques to become common for the marketing of parts and equipment that aren't capital expenditures.

INFLATION=OPPORTUNITY

As costs increase and manufacturers cut back on the quality and size of their products (raising prices as they do so), opportunities will abound for others to supply appropriate products and services. Some areas with high potential: (1) cost-cutters in the tradition of budget motels and do-it-yourself wares; (2) preventive-maintenance items to guard all manner of things against corrosion, insects, and other natural hazards; (3) antitheft devices and services; (4) anything that conserves energy; (5) cherished possessions with value that will rise faster than the inflation rate. The ultimate product of the 1980s may be a kit for a platinum/plastic aquarium that comes with a solar-powered filter pump and its own piranha fish.

INNOVATION

The 1980s will *not* be remembered as a time of great innovation in consumer products and services. Instead the decade will generally bring modifications of what is already on the market. Why? Because (1) capital will be in such short supply that major technological breakthroughs will be difficult to achieve; (2) newcomers will find it tougher to enter existing markets because the established leaders will have consolidated their positions; (3) consumers generally will have less to spend on new product categories because inflation will force them to spend a higher proportion of their money on essentials; (4) except for the young, who will be less of a market influence than at any time since the Depression, consumers will tend to be less receptive to new ideas; and (5) it will be harder to get people's attention and sell them on new concepts because they will be inundated with information from every imaginable medium. All that means that people in sales, marketing, and advertising will be called upon hourly to reinvent the wheel. It may be translucent, solar-powered, or newly packaged, but it will still be a wheel. Thus the marketer's main job will be the usual one: come up with enough in the way of perceived benefits so that consumers will feel it's worth a higher price for the product or service.

> **Until now, marketing organizations have tried to be as self-sufficient as possible. But in the next decade they'll have to forego some of their pride and start contracting for outside help. Markets will be much more segmented, which means that companies will be sharing more, too.**

MANAGEMENT SCIENCES

The computer will pervade every aspect of marketing both inside and outside the sales office. Widespread applications will be spurred, first, by the declining costs of microprocessor technology ("computer on a chip") and very-large-scale integrated circuits (VLSI); second, by the hands-on computer experience and eagerness to apply that knowledge that virtually every college graduate with a business or marketing degree, hired as a sales trainee, will have; and, third, by the wedding of computers and advanced communications systems.

MARKET STRATEGY

Information generated on the spot by electronic point-of-purchase (P-O-P) terminals in retail stores, when coupled with product codes, says the Diebold

Group, "will allow manufacturers to evaluate the market desirability of alternative product features and pricing strategies, bringing a degree of precision to marketing previously not possible." Such instant information will also permit advertising/merchandising approaches to be tailored more specifically to the needs of individual markets.

MARKETING AND THE LAW

The next decade will be characterized by a shift from "Let the buyer beware" to "Let the seller be sued," warns Janet Wolff, executive vice president and director of creative services for the William Esty advertising agency, adding that she expects many companies will indeed be sued. Already under attack is Brown & Williamson Tobacco: a smoker who fell asleep while smoking and was severely burned is claiming that the cigarette was defective because it wasn't self-extinguishing.

MARKETING PROFESSION

A boom market for marketing executives is coming. The growing complexities of social and economic changes mean companies will need new and innovative marketing solutions. Look for more marketing positions to be created with emphasis, as never before, on the truly creative marketing manager.

MARKETING RESEARCH

After a decade of absorbing technical innovations made possible by the computer, the emphasis in marketing research will shift to improving the management of the function. Rather than dwelling on methodology, researchers will become more pragmatic, performing integrated studies that can become the basis for decision-making by marketing management. These will tie together such specifics as sales force deployment, channels of distribution, advertising and promotional support, and customer service.

A REMINDER

Often in this Special Report, additional aspects of a subject appear under a separate overline, sometimes several separate overlines. For this reason, we urge you to read this Special Report in its entirety.

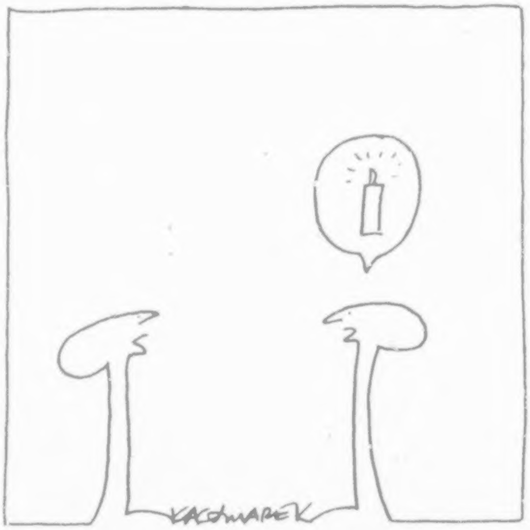
Also, limitations of space makes it necessary for us to omit some subject areas entirely. We will remedy this in regular issues of S&MM in the coming year when we will continue our examination of the next decade. If you have a specific subject area in mind that does not appear in these pages, please tell us about it.

◆ ◆ ◆

Congress will make it easier for consumers and competitors to obtain government-held product information now considered "trade secrets." New laws will leave performance qualities of products privileged information but will cut loose such data as customer lists and pricing formulas.

MOTIVATION

Career "pathing," job enrichment, and recognition programs will grow as sales executives seek ways to increase motivation, particularly among career salespeople. Although high technology and other fast-growing companies may experience shortages of qualified field managers, particularly in the second half of the decade when growth of the 25–34-year-old segment of the population slows, there'll be more candidates than management openings at many companies, requiring innovative management if turnover is to be kept under control.



"THAT'S A 19TH CENTURY IDEA."

Copyright, Sales & Marketing Management

NEW PRODUCTS

Unlike consumer markets, the industrial field will demand new technology to increase productivity. Scarce capital will be allocated primarily to developing products designed to meet the needs of key customers. Similarly, the automation of the office, already underway, will come to full flower. Top management will justify greater expenditures for improved computers and other information-handling devices—all in the name of increased efficiency and profits. Product development will continue to run rampant in such areas as electronics and industrial chemicals. Although most of this will be applied to the industrial area, it will have a dramatic impact on one segment of the consumer-goods market: communications. Much of the status and importance that the consumer of the 1960s and 1970s attached to cars and boats will be transferred to such things as cable TV, videorecorders, and home computers. Even people of modest means will forego many tangible goods in favor of being wired into a network based on cable, microwave, and satellites.

OUTDOOR ADVERTISING

Women's driving patterns will change when they begin working. They'll be heading to the business district five times a week, and to the shopping center perhaps only once. Users of outdoor advertising will have to determine on which routes they should place their ads for products aimed at the female consumer.

OVERSEAS CONVENTIONS

Congress will repeal those unpopular tax restrictions on business executives who attend overseas conventions. The number of organizations cancelling meetings abroad has prompted many foreign governments to threaten retaliation aimed at international meetings in the U.S.

PAPERWORK

Thank heavens, less of it for field salespeople, who will reap the benefits of computers that log orders, call reports, and other sales data.

POINT-OF-PURCHASE DISPLAYS

Surveys show that 72% of health and beauty-aid purchase decisions and 82% of housewares buying decisions are made in the store. Therefore, marketers of those products should give more attention to their in-store displays if they want to attract the consumer faced with an increasing array of new products.

> **"Corporate management will be required to focus an expanding share of attention to building revenues. The accumulation of capital from internal operations is becoming more difficult, and capital from outside sources is also harder to come by. This will increase the importance of the sales function greatly."**
>
> *Mack Hanan*
> *President*
> *The Greenhouse Group*

PRICING

As more and more products mature, legions of "price brands" will move in on the attack. In all areas of consumer goods from shampoo to stereos, alert marketers will carve out a sizable business by selling merchandise of adequate quality and few frills. Often this will be done with little or no advertising support. To survive such inroads, marketers of established brands will strive to keep them from becoming commodity products. They will try to upgrade their wares and add benefits that the consumer will perceive as being worth a higher price.

PRINT ADVERTISING

Although working women watch less TV, they do more reading if they travel to and from work on public transportation. Some will read paperback novels, of course, but many will read newspapers. Thus newspaper ads could become an even more significant part of the media mix.

PRODUCT DIFFERENTIATION

Making a product or service stand out from the herd will be increasingly difficult. Three likely strategies: (1) upgrade the educational element of the product by selling (or giving away) such things as booklets on personal care with cosmetics or videocassettes on skiing with the purchase of skis and equipment;

(2) draw up a warranty that promises genuine benefits to the consumer and give it maximum promotion; (3) endow the product with personality (as with the Mickey Mouse telephone) or have it endorsed by an authoritative figure or organization (the official seat cushion of the Brotherhood of Teamsters).

PRODUCT LIABILITY

Product liability pressures will subside as most of the major industrial states adopt a model law developed by the Commerce Dept. The model statute, already adopted by Illinois and six smaller states, exempts wholesalers and retailers from sharing in a manufacturer's liability. Another factor is that insurance companies are reviewing their actuarial formulas and finding that the steep premium jumps of recent years may have been an overreaction to a handful of sensational injury awards. However, more regulatory agencies will require that labels bear the identity of each company taking part in the manufacturing process. Example: drug companies that produce ingredients but contract out the capsulizing process. Look for stiff opposition from food manufacturers that don't want their names on certain private-label products for competitive and pricing reasons.

> **The energy crisis will affect everything people do, even the types of clothes they wear and the types of food they eat.**
>
> C.C. Grinnell
> Director, corporate marketing research
> Kraft

PRODUCT PLANNING

With most of the large tracts of the marketing landscape staked out by entrenched leaders, competitors—even large ones—will concentrate on selecting a narrow segment of the business and creating a profitable niche for themselves. They may merely embellish an existing product concept as Hanes Hosiery did with L'eggs, or they may determine their slice on the basis of price as retailers do with their private-label lines. The key to success will be in fortifying a position in a profitable segment of the market *and being recognized as specialists in that field.* All of that will happen amid creeping encroachment on the part of the federal government and consumer groups in determining product standards. As in the case of the automakers and mileage estimates, marketers will yowl in protest—and then turn around and use the official standards as a selling point.

PRODUCT SAFETY

The Food and Drug Administration will grow both in strength and public respect. Passage of a new-drug reform act will enable the agency to process new "breakthrough" drugs faster without sacrificing safety concerns. Its food industry regulation will be improved by passage of an even-handed nutrition labelling law. And cosmetics regulation, until now a never-never land, will take form with passage of a law regulating cosmetic safety and labelling. But the Consumer Product Safety Commission (CPSC) will not survive the scrutiny of White House budget planners or congressional auditors as it has for its first 10 years. Administrative reformers will find the CPSC the least cost-effective regulatory agency in Washington. If not disbanded or dismembered, the CPSC's budget will be slashed to less than half of this year's $80 million.

RECRUITING

Sales managers will spend more time recruiting and selecting salespeople because of changes in the labor pool and the need to cut costly turnover. Between now and 1990, the number of 16-24 year olds in the labor force, the age group that's the prime source of sales and management trainees, will shrink by more than 1.3 million. But (1) simultaneously with the overall drop, the number of young black adults will double, and (2) by the end of the decade, women will outnumber men. Companies will thus alter their recruiting methods to attract more women and blacks as a matter of necessity as well as to comply with equal employment opportunity laws. Meanwhile, competition among companies for qualified sales trainees of all kinds will be fierce, and the companies will do more to retain those hired.

• • •

Sales managers who were able to pick and choose among recruits in the 1970s will be scrambling to find candidates as the pool of 16-24 year olds decreases in the next decade. Thus as companies grow bigger, competitive bidding for sales train-

> **The survivor of the 1980s will be the individual who gathers the most relevant information when making decisions and when judging the effectiveness of those decisions.**
>
> J.F. Peil
> Vice president, marketing, U.S., nutritional and medicinal products
> Miles Laboratories

ees will drive compensation upward at a faster pace; the compensation of A, B, and senior salespeople will rise at comparable rates to maintain sales-staff morale and the traditional income spreads between skill levels. All told, compensation management is going to be a very prickly proposition in the next decade. Note: The new trainees, reflecting changes in social values, will have less company loyalty. Conscious, too, of the leverage that their fewer numbers gives them, they'll be much more prone to job-hop. With sales training costs rising briskly each year, more companies will ponder how much sales training they can afford, whether it is worth it, and what changes are needed to make it cost-effective.

REGULATORY AGENCIES

All regulatory agencies will be jolted by the passage of a law that puts the burden of proof on their backs. At present, any company challenging a new federal rule must bear the burden of proving that it is invalid or runs counter to congressional intent. An amendment by Sen. Dale Bumpers (D-Ark.) makes "guilty" industries or companies "innocent" until regulators prove otherwise.

RETAILING

In the competition between retail chains downtown or flagship stores and their branches, look for the former units to get more attention and a bigger merchandising role. Mall developments are susceptible to the energy crisis, retailers believe (indeed, sales in the malls are off at the present time), and some say the number of shopping centers already exceeds the need. Macy's "Miracle on 34th St." (S&MM, January 1978) and Woodward & Lothrop in Washington, D.C., show how successful a downtown operation can be, especially when linked to a local renaissance. Another plus for downtown: the growing number of young, "quick spending" professionals expected to settle there.

* * *

Indeed, appreciation of what marketing can do for department stores in their fight to survive inroads of mass merchandisers and discounters (few "traditional" retailers any longer try to match mass merchants' price-cutting, a tactic they know they cannot win) will prompt the stores to give up their "something for everyone" approach. Replacing it will be a narrower customer base, deeper merchandising assortments tailored to that base, and, especially, far more carefully selected vendors whose "quality image" matches the stores'.

* * *

The branch-store manager: a person to reckon with in the 1980s. Ahead for him (or her) is greater autonomy than he has ever known to run his store as he sees fit—he'll be expected to know his store and his trading area better than anyone else in his company. Also, expect him to be far less influenced by his company's buying organization; some managers, notes *Stores* magazine, will be authorized to deal directly with suppliers' salespeople. Also, he'll be as interested in store operations and managing his people as in merchandising, his traditional forte. Increasing competition from specialty shops will prompt him to make certain that his salespeople learn more about what they sell and the best ways to sell it. Note: The Broadway, a clothing chain in the Northwest, now trains its managers in *marketing*.

SALES INCENTIVES

The use of special recognition and awards programs will grow. While merchandise, travel, and cash awards continue to find favor, incentive meeting usage will increase, and a market will open up for more personalized awards such as education for winners or their children. Good news for field man-

> **People are going back to basics. They're just not interested in new things so much anymore. They realize it's essential for them to try to hang on to what they have now. As an economic attitude, conservatism will rule in the 1980s.**
>

Notes: Labor force, also called the work force, is the total number of people working or looking for work.
The Bureau of Labor Statistics prepared three different projections of the future growth of the work force—high growth, low growth, and intermediate growth. Data shown in these tables are from the intermediate growth projections.

Sources: Bureau of Labor Statistics, *Employment Projections for the 1980's*, Bulletin 2030; *Employment and Unemployment During 1978: An Analysis*, Special Labor Force Report 218; and U.S. Dept. of Labor, Employment, and Training Administration, *Annual Employment and Training Report of the President: 1978.*

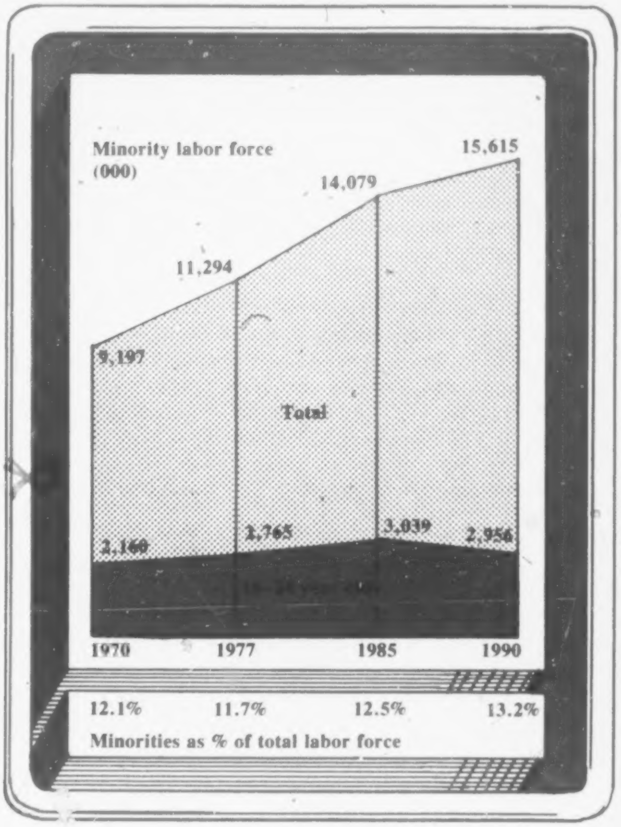
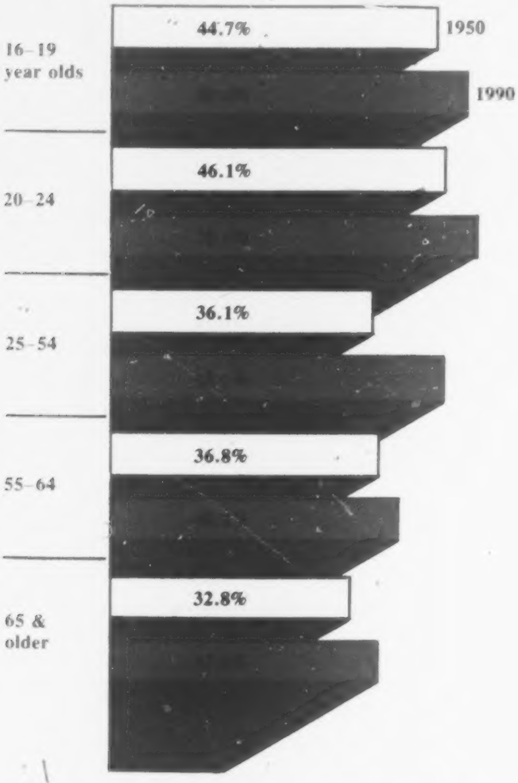
Better times ahead for minorities in the job market?



. . . especially among younger groups

Women as % of age group in labor force



agers and incentive program administrators: Computerized call reports will help with tracking.

SALES MANAGEMENT

Consultative selling will intensify, with more field salespeople assigned to industry specializations and team selling. Teams made up of various disciplines (for example, sales, engineering, and design) will work with end users to put together packages of products and services that can best (and most profitably) serve the cutomer's needs.

◆ ◆ ◆

Better precall planning via industry and proprietary data banks is inevitable to help salespeople pinpoint customer needs and tailor their presentations to specific customer benefits. Also, expect computer-selected routing for maximum account coverage (this because of the high cost of gasoline, especially).

◆ ◆ ◆

Management will increasingly cut away nonproductive activities like writing orders and handling inquiries and complaints, freeing salespeople to concentrate on what only they can do: selling new accounts, introducing new products, and selling new applications and broader uses. In other words, increasing the volume of sales.

◆ ◆ ◆

The long-term trend of smaller sales staffs per manager will continue. Unpublished data made available to S&MM by the Bureau of Labor Statistics' Division of Occupational Outlook suggests that the typical sales manager in manufacturing companies will oversee 3.72 salespeople by 1985 vs. 4.36 in 1970. However, the number of sales executive slots in such companies will expand three times faster in the first half of the next decade than it did in the 1970s. Based on the government's data, the number of sales managers will swell 3.5% per year in the 1976–85 period vs. only 1.1% in the 1970–76 period.

◆ ◆ ◆

Some other trends in sales force management: Managers will better define their selling objectives and sharpen their sales planning to increase the sales force's effectiveness. Also, more attention will be given to searching out lower-cost selling alternatives (example: far-distant customers and those who buy only infrequently or place only small orders will be switched to a telephone salesperson). For many companies, only the most important customers will have the benefit of a sales call from a company salesperson. (Some marketers will make a good living by selling only to small and medium-sized accounts that are of marginal interest to the bigger companies.)

SALES SUPPORT

Consumer and industrial organizations will support their selling activities with more (and better targeted) advertising and direct mail. Samples and self-demonstration kits will often be included to cut down on the need for personal follow-up.

SAMPLING

Free samples have fallen out of favor because of rising distribution costs. Yet marketers who must continually introduce new products or line extensions to keep their brand franchise will need a way to get the increasingly skeptical and money-conscious consumer to try the product. As a result, more of them will turn to the low-priced miniature sizes currently being used by such companies as S.C. Johnson & Son for its Agree shampoo, Chesebrough-Pond's for its Vaseline Intensive Care lotion, and American Safety Razor for its Flicker ladies shaver.

SELLING ABROAD

A Dept. of Trade? Whether or not Congress opts for such a cabinet-level agency, federal support for export sales will soon come to a showdown debate within government circles. The issue is for the Administration either to expand exhibit promotions abroad and adopt bold export-tax incentives or, to continue the Commerce Dept.'s spotty sponsorship

> “
>
> **The continually increasing costs of recruiting, training, and supervising a direct company-employed sales force will lead many firms to sell their products via commissioned manufacturers' representatives. A recent study by Prentice-Hall reveals that a $23,000 salaried company salesman actually costs in excess of $45,000.**
>
> Thomas C. Reinhart
> President
> Albee-Campbell, Inc.
>
> ”

of customer leads and overseas catalogue shows. Pushing the showdown: disillusioned marketing executives who signed on with the Commerce Dept. shows on the promise they'd be allowed to fashion a fresh approach to export sales.

◆ ◆ ◆

Smaller companies, especially industrial marketers, will pursue sales opportunities abroad as never before. The lures: (1) a growing demand for U.S. products, especially those that will meet foreign governments' calls for more safety equipment and pollution control devices for local use; (2) mounting production costs that are occurring nearly everywhere overseas; (3) the low value of the U.S. dollar, which creates many "bargains"; (4) the sheer size of overseas markets (U.S. companies sell less than 2% of all the foreign products bought by Communist bloc nations); and (5) the trend by the U.S. government to lend assistance to companies that want to export as well as those that might want to set up factories in other lands.

SMALL BUSINESSES

The upcoming White House Conference on Small Business will leave a wake of special government incentives to small marketers. They'll include more federal contract set-asides and more direct government procurement from local retailers and wholesalers. The White House meeting will also rekindle congressional interest in a value added tax (VAT). As implemented in many European countries, VAT would replace the bulk of the corporate income tax with an approximate 10% levy on goods and services at each level of production and distribution.

SUPERMARKETS

A result of the increase in the number of working wives will be an increase in the number of husbands and teenagers doing supermarket shopping. A study by *Progressive Grocer,* an industry publication, shows that already "more than one-half of the men interviewed do *most* of the marketing for their household." The study suggests that marketers who hope to profit from this new trend would do well to:

- Increase the shelf space allotted to nonfoods that appeal to men such as automotive supplies, hardware, and gardening equipment.
- Stay open later because men are more reluctant than women to shop in crowds.

Companies that supply food or nonfood items to supermarkets will have to reorient print and broadcast advertising to their new target audiences, placing more ads in teen and men's magazines and showing men and teenagers in TV ads for their products. But it's going to be a challenge to create a convincing commercial showing two men comparing different brands of laundry detergent or paper towels.

SYSTEMS SELLING

Once the exclusive province of industrial marketing, systems selling will be applied increasingly to consumer products. Few companies will be able to sustain themselves without positioning their product lines as systems designed to treat all of a customer's needs in a specific area. Look for food and toiletry marketers to follow the lead of health foods in offer-

> “
>
> **The energy situation will stabilize. People will adjust to conservation. Besides, there's hope for the future: by 1985 there will be new energy sources and the possibility of alternative energies. Conservation methods will also be more advanced.**

> Toyota Motor
>
> ”

> **In the 1980s the business executive will have a desktop computer that will help him solve problems of varying complexity. As a result, there'll be fewer stacks of reports and fewer channels needed to tell if the company is gaining or losing.**
>
> Dick Behrman
> Director, marketing research
> Liggett Group

ing a "menu" of products designed to work together. In the contest to outfit U.S. homes for communications in the 1980s, the decision will go to the purveyor of the best system, which could be a manufacturer that today is known best for a single product such as a telephone or a TV set. Another reason marketers will embrace systems selling: By grouping products into systems, a company can put together a higher-value package that justifies the attention of the sales force—and of the purchasing agent.

TELEPHONE SELLING

Inside sales forces will grow as executives of both manufacturing and wholesaling organizations take advantage of the availability of more sophisticated (and relatively less expensive) forms of electronic communications to cut the costs of prospecting, lead qualification, and closing small-volume or low-margin accounts. To keep the sales effort from becoming too depersonalized, look for companies to reinforce phone calls and computer-to-computer transactions with printed or video newsletters.

A REMINDER

Often in this Special Report, additional aspects of a subject appear under a separate overline, sometimes several separate overlines. For this reason, we urge you to read this Special Report in its entirety.

Also, limitations of space makes it necessary for us to omit some subject areas entirely. We will remedy this in regular issues of S&MM in the coming year when we will continue our examination of the next decade. If you have a specific subject area in mind that does not appear in these pages, please tell us about it.

WORLD ECONOMIC DEVELOPMENT
1979 and Beyond
Herman Kahn

TEST MARKETING

Market tests of new products will become "instant." Widespread use of scanners and P-O-P terminals at check-out counters will give marketers a fast reading on the turnover rate of new products from the first day the item is put on sale. That information will be supplemented by use of interactive TV, coupled to a computer, for the speedy collection and analysis of data on who did and did not buy the product. The other side of the coin: Existing products that don't meet retailer's revenue goals will have very short shelf lives.

TRADE PROMOTIONS

As target markets become increasingly segmented and the importance of regional marketing grows, promotions will also have to be regionalized. Retailers will continue to be offered far more promotions than they can use—the executive vice president of one supermarket chain says his stores have at least 1,000 available at any given time—and so will choose the ones that work best with their own regional objectives.

TRADE SHOWS

Expect to see two opposing forces at work: rising transportation costs will make it more expensive to get people and exhibits to shows, while sales call costs continue to rise faster than the cost of a trade show contact. One solution will be to create more regional trade shows, which enable companies to make important show contacts and still control transportation costs.

TRAINING

Upgraded and increased training will be the norm at all levels of the sales force. The emphasis will be on selling techniques rather than product training. New-product training sessions will dwell on potential end-user benefits rather than product features. New hires will spend less time in the classroom and more time in on-the-job training, where better-trained first-line managers will see that they become productive as soon as possible.

WARRANTIES

The Federal Trade Commission's product-warranty enforcement program will dwindle and disappear, much like Truth in Packaging did in the 1960s. Reasons: Studies will show that consumers seldom read presale warranties on retail countertops (where the FTC is insisting they be posted). Also, the FTC's rules are so harsh that few companies will offer full warranties as Congress had hoped when it passed the Magnuson-Moss Act.

ZIP CODE

Advertising, as well as sales calls, will become far more precise, thanks to the arrival of nine-digit Zip Codes (linked to data to become available from the 1980 Decennial Census for Zip Code areas). Nine-digit classifications will allow consumer products marketers to zero in on geographic areas as never before: for example, they'll be able to exploit the demographics of one side of a city block vs. the other side. Their direct mail and sampling programs will also benefit greatly. Industrial marketers will be able to set up far more productive sales call patterns because nine-digit Zip Codes promise highly detailed profiles of prospects' locations. What could be better than nine-digit classifications? Eleven-digit, obviously.

> **We are inundated with marketing information. During the next decade the problem will only get worse, which makes separating relevant from irrelevant data a crucial part of the marketing job.**

JAUNDICED EYE

Waxing nostalgic

Gather 'round, children, and I'll tell you about the weird experience I had one day back in the autumn of 1989. Eager to review all the changes that had taken place in consumer and industrial marketing during the next decade, I visited the director of the Wax Museum. There is probably no more accurate reflection of the past than the range of subjects depicted in wax.

"What new figures and items are you going to display next year?" I asked the director, whose eyes resembled crystal balls and whose smile was an exact replica of the Sphinx.

"Step into the back room and judge for yourself," the director said, pointing to a door behind which I could hear the murmur of machinery working in time to piped-in music. There, in various stages of disrepair, were the old figures of Presidents and kings, movie stars, and famous bandits. They had been discarded.

On the far side of the room, ready for the re-opening of the museum on Jan. 1, 1990, were the new displays. It was obvious that as a group they told the story of things that had slipped into the past during the decade of the 1980s.

It was no surprise to me to see the famous statue of the maid doing windows. Right behind her was a salesman carrying two heavy cases of samples of actual merchandise available for immediate delivery. At first it taxed my memory to identify the smiling, attentive figure behind a counter, but the director explained patiently that it was a retail sales clerk.

Over in the corner was a man answering his own telephone; it had no recording device so he was making notes on old-fashioned note paper with a lead pencil. A group of six figures depicted a sales manager meeting in person with his sales force, and upon closer inspection one could see that *all* the salesmen were awake. Then there was the figure of a doctor making a house call to the bedside of a sick child, and a gorgeous reproduction of an automobile with a full-sized spare tire.

Of all the items ready for display, however, the one that brought the most nostalgic tear to my eye was a cup of steaming hot coffee. The price alone identified it as a relic of bygone days. It was marked $1.00.

By Jim Lavenson

The perils of prophesying

Forecasting the future is one of the riskiest of human endeavors. Here are some predictions that were made about the 1970s. Some were on target, many more were not.

Industry will take over many functions considered government's preserve, such as health and social services. *(Nation's Business)*

* * *

Corporations will be called upon by government to aid in such things as airport construction, urban rapid-transit, low-income housing, and pollution control. (*Credit & Financial Management*)

* * *

By 1975 there will be a need for 14 million more workers than will be available. *(S&MM)*

* * *

On the way home, the businessman will stop by his doctor's office for a booster shot of anti-cancer vaccine. (*Business Week*)

* * *

Two major problems most worrying the advertising business in the 1970s will be somehow to placate management's demand for documentation of results and to accommodate and avoid getting trampled by a massive current of consumerism. *(Advertising Age)*

* * *

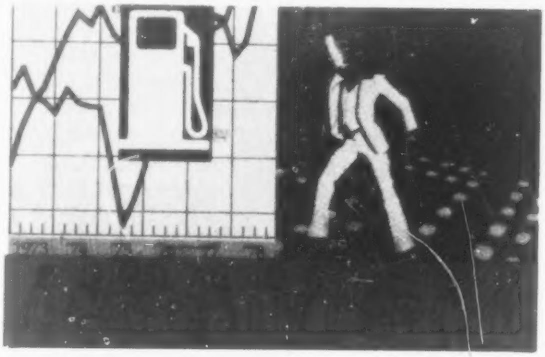
There will be a shortage of qualified marketing managers because of a drop in the 30–45-year age group. *(S&MM)*

* * *

There will be much experimentation in defining the corporate marketing role. *(S&MM)*

* * *

There will be a network of large time-sharing computer systems for rapid transfer of information and data. (*Nation's Business*)



It will be the decade of the consumer, who will assert his wants and demands, and it will be the task of marketing executives to know their customers. (*S&MM*)

* * *

The marketing executive will be more quantitatively oriented, have a working knowledge of behavorial and humanistic concepts, an aptitude in the social sciences, be internationally minded, and possess an ability to learn—quickly—because of the geometrically expanding body of knowledge. (*S&MM*)

* * *

Marketers will learn to deal less with absolute numbers and more with lifestyles and learning. (*S&MM*)

* * *

Quantitative methods such as operations research, data processing, statistical analysis, etc., will be put to increasing use by general management and marketing executives in research, planning, and decision-making. (*S&MM*)

S&MM MARKETGRAPH

Latinos write another American success story

Participants in the latest of the immigration waves that traditionally have fuelled U.S. growth, Latinos are attracting more attention from marketers looking for sales-building opportunities. Despite the barriers posed by language differences and job discrimination, the share of Latino families in the middle- and upper-income brackets ($15,000 and up) has more than doubled since 1972.

Where the prospects are

County/State	*Latino Pop. (Thous.) 1/1/80*	*% Of County's Total Pop.*
New York City (5 boroughs)	1,478.8	18%
Los Angeles, Cal.	1,367.0	19
Dade, Fla.	540.0	36
Bexar, Texas	505.8	51
Cook, Ill.	368.1	7
El Paso, Texas	308.8	66
Harris, Texas	269.7	11
San Diego, Cal.	229.1	12
Hidalgo, Texas	221.4	89
Orange, Cal.	219.9	11
10-County Total	**5,508.6**	**18%**
U.S.	**12,561.8**	**6%**

CELEBRITIES IN SELLING

More than just tinsel

As Olympus Camera's new spokeswoman, Cheryl Tiegs goes on sales calls and peps up sales meetings as well as appears in TV commercials (above). Her personal participation in many aspects of the marketing program is typical of the new breed of celebrity-salesperson. The fees are steep, but more and more companies are hitching their fortunes to a star. Page 30.

Inside Out

Selling costs. The ravages of inflation underscore this preview of S&MM's 1980 *Survey of Selling Costs.* Page 12.

Industrial marketing. Data Set Cable shows how a small company can find opportunity where a larger one sees nettles. Page 13.

Media. The 13-30 Group thrives by publishing sponsored magazines that reach as many as 300,000. Page 14.

S&MM Barometer. Marketers of capital equipment can look forward to a better-than-expected first half. Page 15.

Wells Fargo blazes a trail. Sales climb at its Security Guard Div., thanks largely to astute selling. Page 17.

Washington. Federal regulators may stir up more trouble in the 1980s, but it will take them longer to do it. Page 41.

Marketers get a 10% raise. Despite all that talk of corporate austerity, sales and marketing executives almost kept up with inflation last year. Page 43.

S&MM
TABLE OF CONTENTS FEBRUARY 4, 1980

What's coming up

Survey of Selling Costs. With inflation likely to raise the roof on budgets as never before, this year's *Survey* is the most important one yet. S&MM lists those markets where costs are rising the fastest, examines compensation programs likely to yield savings without crimping salespeople's performance, and shows typical costs for meetings and training programs. Feb. 25.

Test marketing. Appearing in this S&MM Special Section is a list of the favorite test markets used by consumer-goods companies—and why. A bonus: case histories.

Milk marketing. Lehigh Valley Cooperative Farmers is using marketing techniques not usually associated with farmers' co-ops (such as positioning milk against soft drinks). The result has been a dramatic turnaround. Apr. 7.

Sales incentives. Motivating the sales force is always a challenge, and today's tough economy makes it even tougher. One highlight of this S&MM Special Section will be results of an exclusive survey on the use of cash, merchandise, and travel incentives. Apr. 7.

Address all manuscripts and correspondence relating to editorial matters to The Editor, Sales & Marketing Management, 633 Third Ave., New York, N.Y. 10017.

Because S&MM is almost totally staff written, only a very small number of contributed articles can be accepted for publication. For that reason, contributors are urged to submit an initial query along with an outline.

All unsolicited manuscripts must be accompanied by a return envelope with sufficient first-class postage. We regret that those arriving without such postage cannot be returned.

Brewing to sponsor their *Sports Bulletin*, which appears three times a year and has eight regional editions geared to various athletic conferences. Distributed to 750,000 students as a college newspaper insert, the 24-page publication carries eight pages of Miller ads.

MARKETING STRATEGIES

Betting on the future

John D. Quinn faced stiff odds when he became director of the New York State Lottery in April 1976. Although his background included administrative experience and computer training in his 24-year Army career, as well as a stint as Deputy Director of Michigan's lottery, he was taking over an operation that had been suspended a year earlier following persistent charges of mismanagement. Quinn, who had had little marketing experience, promptly dubbed the lottery the Empire Stakes, streamlined its administration, and introduced attention-getting games.

Under his direction, the lottery has parlayed impressive winnings on occasion, but his struggles are far from over. The

N.Y. Lottery director Quinn

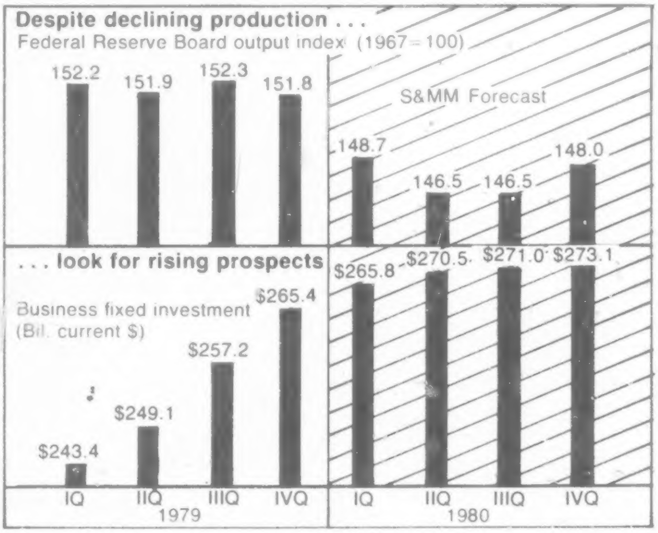
S&MM BAROMETER

A surprise for industrial marketers

Marketers who sell equipment and other products to enable plants to upgrade their facilities will enjoy better-than-hoped-for sales, at least until July. A consensus of the leading econometric consultants, as polled by S&MM last month, shows weakening of industrial output (as measured by the Federal Reserve Board index) through the third quarter, but it now appears that manufacturers will nevertheless increase their spending for structures and equipment.

What explains the unusual state of affairs? Mike Evans, of Evans Economics, believes that it is attributable to the government's lowering of the capital gains tax and its pruning of corporate income tax rates. Both actions were meant to stimulate investment spending—and their effects are just now beginning to be felt. Another theory is offered by Lee Phillips, a senior economist in Data Resources' international forecasting group. He says that with "inventories not out of line and potential capacity bottlenecks shaping up," companies will be tempted to put overdue modernization programs into effect.

Significantly, many are convinced that modernization spending will be even stronger as a result of the Commerce Dept.'s latest survey of capital spending plans.



Sources: Consensus forecast of Chase Econometrics, Data Resources, Evans Economics, Merrill Lynch Economics, U.C.L.A., Univ. of Michigan, and Wharton Econometric Forecasting Associates.
Sales & Marketing Management

lottery has contributed over $90 million to New York State each year since 1976 (45% of the revenues go to the state for education, or in the case of the Olympic Lottery, to a fund for winter-sports education programs), and sales in the fiscal year ended Mar. 31, 1979, were $186.8 million, with net profits of $90.3 million. Those sales, however, are a decline from the previous year's $196 million, and the decrease underscores that the 1980s will test Quinn's marketing skills.

The ticket-buying public has always been a fickle lot, demanding new games, and Quinn satisfied that demand in 1976 with an instant game (the player knows immediately if he's a winner), which sold a staggering $18 million worth of tickets in its first week. Another new game, Lotto, has actually attracted slowly increasing participation since it began in November 1978, Quinn says. A daily numbers game would seem to represent a solution to the problem of satisfying the public's taste for novelty (New York is one of 3 state lotteries, out of a total of 14, that do not offer it). Quinn says that he is waiting for "further executive and legislative guidance" but that such a game could be profitably run.

Whatever the future holds, he looks ahead with an attitude designed to fend off critics and entice would-be players. Demonstrating a marketer's gift for product positioning, he says, "I don't look on this kind of thing [the lottery] as gambling. I look on it as recreation."

S&MM PREDICTS

More sales trainers will be made privy to what is in their company's marketing plan. The idea: to enable the trainers to teach the precise tactics that the marketing department expects new as well as veteran salespeople to employ in selling, say, a new product. The change is a response to growing complaints that what trainers teach is too general or sometimes completely out of step.

◆ ◆ ◆

An important coming trend in home buying: the one-stop "real estate center." Such centers, notes Rose Kyllingstad, an executive of the Great 5% Real Estate Cos., Denver, will sell houses, plus mortgages, insurance, relocation services, even home decoration services. Kyllingstad predicts that the centers' major appeal will be their ability to offer lower rates for each element in the total package.

◆ ◆ ◆

Expect a boom in the use by salespeople of home terminals hooked into computerized sales order data back at the home office or district office. All it will take is lower prices for the terminals, as is happening for telephone acoustic couplers. The couplers, such as Texas Instruments', allow a salesperson to find the status of an order right in the customer's own office.

◆ ◆ ◆

A big beneficiary of the rising costs of gasoline (see page 12) will be the airlines, as people leave their cars at home and go by air. USAir (formerly Allegheny Airlines) chairman Edwin Colodny predicts that the switch to air travel will help boost his company's revenues to $1 billion by 1982.

RETAIL STORE SALES

Comparing S&MM's Survey with the Census

Marketers relying on Sales & Marketing Management's annual *Survey of Buying Power* for estimates of retail store sales will be comforted by the just-released U.S. summary tables from the government's 1977 *Census of Retail Trade*. S&MM's *Survey*, of course, uses the Census Bureau's count as a benchmark for updating its own estimates each year. The more time elapsed from a benchmark period, however, the greater the possibilities for going off track.

A comparison between the Census Bureau totals and S&MM's 1977 estimates shows that the *Survey* generally was right on the money (see the accompanying table). The *Survey*'s estimate of total U.S. retail sales is extremely close to the Census total: just 0.1% higher. Actually, the *Survey* was dead on target because its estimates include sales taxes and carrying charges, whereas the 1977 Census omits them.

S&MM was also remarkably close to the Census totals for the three biggest retailing regions. Compared to Census data, the *Survey* showed no perceptible difference in the Great Lakes region, and was off only 1% in the Southeast and 1.6% in the Mideast.

The greatest spread between *Survey* and Census data occurred in the Rocky Mountain area, where the smaller states chalked up growth rates far faster than had been expected. Even here, the *Survey* did well in tracking the principal states of Colorado and Utah.

Dramatic regional contrasts appear when store counts are considered, an important factor in planning distribution strategy. Overall, the total number of retail store establishments slipped by 57,803 between the 1972 and 1977 censuses. This was mostly a statistical fluke because the bureau eliminated direct-selling establishments (which numbered 141,294 in the 1972 census) from the 1977 count.

Although this contributed to the significant reductions that took place in the Northeast and the Midwest, most Southern and Western states still showed an increase in the number of retail outlets. (For another aspect of the *Census of Retail Trade*, see the Editor's Call Report, page 6.)

BUILDING A SALES FORCE

Wells Fargo blazes a trail

For many security guard companies, business consists of servicing accounts and maintaining sufficient personnel. Most companies don't even have sales forces. Wells Fargo's

Despite talk of austerity, sales and marketing executives almost kept up with inflation last year. Counting bonuses, they even may have come out slightly ahead.

MARKETERS GET A 10% RAISE

By JOHN A. FISCHER
Vice president
Sibson & Co.

Plans in early 1979 to scale back budgets for management pay increases did not materialize at many companies. Although companies gave smaller increases to those executives receiving pay boosts, the proportion of top managers winning such awards rose sharply, 91% in 1979 vs. 71% in 1978.

Strong business results, coupled with the flexibility of federal wage guidelines, helped push pay increases for sales and marketing executives upward at a faster rate in 1979 than the previous year. And it looks as if more of the same is in store for 1980 because many companies are budgeting even larger salary increases than last year.

An average increase of 9.9% in salary-only levels in 1979 characterized the 13 sales and marketing positions included in Sibson & Co.'s annual management compensation survey (Table 1). This compared with an 8.4% gain the previous year.

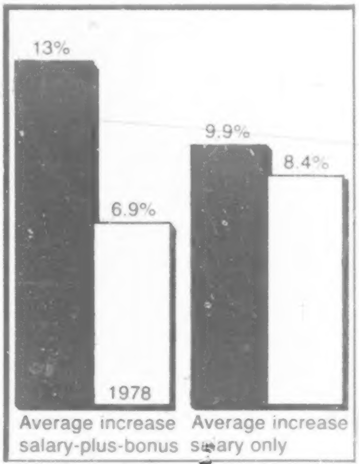
John A. Fischer is a vice president and principal of Sibson & Co., a Princeton, N.J., management consulting firm that specializes in employee compensation and human resources management.

For companies that pay bonuses, the 1979 gain in total compensation was a strong 13%, almost double what it was in 1978. This was a reflection of tying incentive plans to extremely good business performance achieved in 1978. The normal practice is to record bonus payments in the following year.

Overall, the 9.9% salary-only gain by sales and marketing executives was on a par with the average increase experienced by the 65 top management positions at the 725 companies (representing 30 industries) that are included in the Sibson survey. However, the 13% salary-plus-bonus increase earned by sales and marketing managers trailed the comparable 14.8% average for all 65 top management slots.

Table 1.

The impact of bonuses



Source: Sibson & Co., 1979 *Annual Management Compensation Survey*

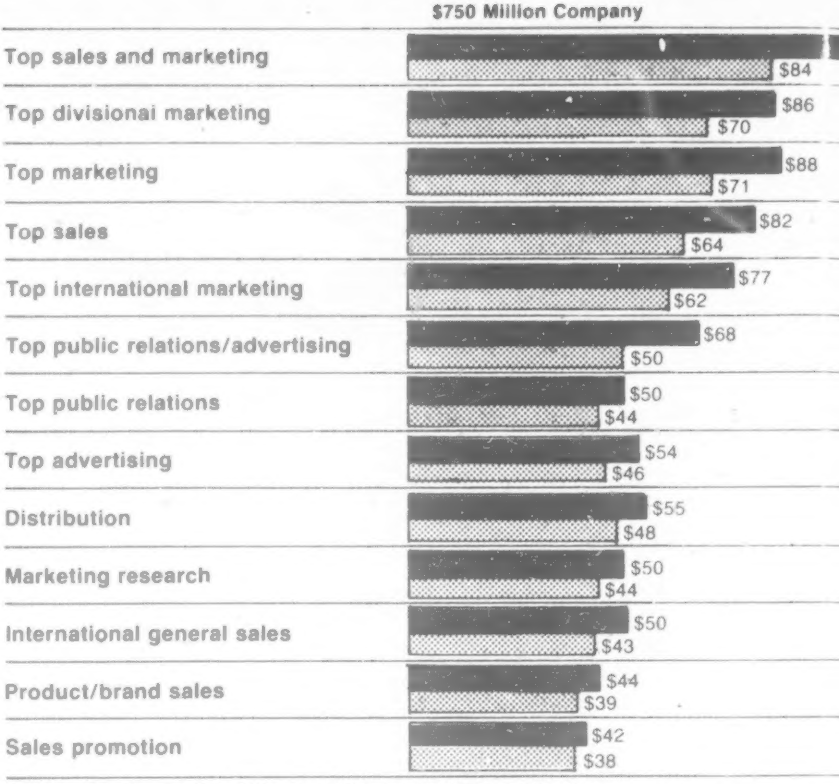
Regardless of company size, the individuals at the top of the sales and marketing hierarchy consistently receive the most compensation dollars (Table 2). In companies that combine the two positions into one post, the top sales and marketing executive is well out in front, followed, in turn, by the top divisional marketing, top marketing, and top sales executives. Trailing these executives are the product or brand sales manager and the sales promotion head. As would be expected, the money gap between the top sales and marketing post and the next three ranking positions widens as company size increases.

Although the federal wage stabilization program had little impact on the rise in management pay levels, it appears to have made some companies postpone introducing new management compensation programs during 1979. The proportion of companies having incentive plans for managers was the same in 1979 as the year before. This contrasts with the steady increases in prior years of the number of companies adopting management

Table 2.

How sales and marketing compensation changes by company size.

(Figures in thousands of dollars)



Source: 1979 Sibson & Co. 1979 *Annual Management Compensation Survey*.

incentive programs. Adopting a new executive compensation plan may be harder to explain to lower-level employees and stockholders than granting pay increases that are averaged in with those for professional, lower level, and supervisory employees.

The flexibility of the federal wage guidelines allowed increases for some groups of employees to top the general pay standard. One out of five companies surveyed indicated they had applied to the Council on Wage and Price Stability for formal exceptions to the voluntary guidelines. Of these, 47% were approved, 4% denied, and 49% are pending.

Interesting contrasts emerge when salary increases are compared to salary-plus-bonus gains. In the salary-only group, the largest salary boost (12.3%) occurred at companies that combine the top sales and marketing posts into one position (Table 3). The top sales executive was close behind, with an 11.8% gain, but the top marketing chief was well down the list, ranking ninth with a 9.0% increment.

In contrast, the top marketing slot led the field with the largest increase in total compensation, salary-plus-bonus, with a hefty 15.5% gain. The top sales executive again placed second with a 14.4% increase, and the top sales and marketing executive placed fifth with a 13.7% rise.

While certain "perks" are losing favor because of tax-law changes, other kinds of benefits figure more importantly in compensation plans as companies use them to attract and retain managerial talent. Because of inflation and economic uncertainty, executives have shown a growing concern for supplemental retirement programs. While virtually all companies surveyed have a defined retirement system, 3 in 10 now provide some form of supplemental retirement income plan.

As compensation levels escalate, executives are showing more interest in supplemental life insurance policies. The predominant plan is supplemental group term insurance although a variety of other supplemental life insurance programs are being adopted for executives.

The Sibson survey shows, not surprisingly, that the higher a person is in the organization, the more prevalent are the perquisites. Here's a rundown on the more common ones:

- Company-paid physicals are provided by more than three out of four companies.
- Company cars by more than two out of three companies.
- Luncheon/dinner club and country club dues by two in five companies.
- First-class air travel by one out of three companies.

Sibson's latest surveys indicate that, despite confusion over uncertain economic conditions and the restructuring of federal wage guidelines, 1980 salary levels will most likely climb at a pace reminiscent of preguideline years. Last year's 12% salary increase for top sales and marketing executives was the second best in the 1974–79 period, topped only by 1976's 13% boost (Table 4). How close 1980 comes to that peak will be one of the interesting things to watch for when the returns come in a year from now.

S&MM's EIGHTH ANNUAL SURVEY OF SELLING COSTS

Selling costs climb a record 15.5%

By THAYER C. TAYLOR
Editorial Director
Survey of Selling Costs

The year 1979 marked a costly finale for marketers, as the 1970s closed with a record leap in Sales & Marketing Management's Selling Costs Index (SCI). And the signs point to another double-digit increase in basic field-selling expenses during the current year.

The SCI, which measures the cost of a typical five-day week of a salesperson in a metropolitan market, shot up 15.5% in 1979, shattering the previous record of 13.8% set in 1974 when OPEC triggered an inflationary spiral in energy costs that persists to this day.

1980 SCI forecast: Dig in

Basic field-selling costs in the new decade will start off on an inflationary upbeat. S&MM projects a sharp 13.0% rise in the Selling Costs Index (SCI). Those who feel there's always a bright side to bad news will be comforted that the expected increase will be lower than last year's 15.5% jump.

- **Restaurant meal tabs** are expected to climb 9.7%, according to the National Restaurant Assn., which says that stable beef prices will hold increases down somewhat. However, S&MM looks for a 10.0% advance, reflecting higher minimum wage and social security taxes as well as the lack of a significant break in commodity prices.
- **Auto rental expenses** will continue their ascent as skyrocketing gasoline prices are added to the double-digit escalation of operating costs. S&MM's *Survey* projects a 15% increase in this area.
- **Hotel room rates** will continue to climb briskly. Laventhol & Horwath, the international accounting company that tracks the industry, expects curtailment of travel demands and increased room supply to limit increases to about 12%. However, most analysts contacted by S&MM think room charges will top out slightly higher, bolstered by favorable occupancy rates, strong business travel, and a continued influx of foreign visitors. S&MM expects a 12.5% increase in this area.

S&MM's projection of 1980 Selling Costs Index (SCI)

	Average Weekly Cost 1979	Average Weekly Cost 1980	% Increase
Food & drink	$118.00	$129.80	+10.0%
Auto rental	213.45	245.47	15.0
Lodging	157.25	176.90	12.5
Total	**$488.70**	**$552.17**	**+13.0%**
Selling Costs Index (1971=100)	**197.0**	**222.6**	**+13.0%**

The advance marks the second straight year that the SCI rose at a double-digit pace and the fourth consecutive year in which it moved up at an accelerating rate.

The surprise in last year's faster-than-expected jump—S&MM had projected a 9.4% increase—was automobile costs. S&MM's forecast that 1979 food and drink tabs would climb 10.2% was close to the 9.5% rise that took place in that SCI component. A forecasted 10.0% bulge in hotel rates was shy of the lodging component's actual 12.9% increment because occupancy rates remained above anticipated levels, enabling the industry to increase room charges.

However, the salesperson's cost in making his appointed rounds was quite another matter. The 8.5% advance S&MM expected in the auto component was far short of the 21.3% increase that occurred.

The 1980 forecast calls for a slight easing in upward cost pressures. At the least, however, it seems certain that marketers will be buffeted by their third straight year of double-digit increases in the SCI (see the accompanying box).

S&MM's 1980 forecast calls for a worrisome 13% rise in the SCI. Most likely, the rate of advance will be somewhat higher in the first half than in the second because the latest round of OPEC price increases and the effects of President Carter's decontrol of domestic oil prices have yet to work their way through the economy.

Also, economic forecasts generally see business activity winding down through the first three quarters, thus deflating some of the inflationary pressures in the second half. However, this doesn't promise much cheer for marketers because corporate profits are expected to slip at a faster rate. Gary Wenglowski, director of economic research at the Goldman Sachs investment company, sees after-tax earnings dropping 6% in 1980 vs. an estimated 15% rise last year.

Thus marketers will be buzzsawed by rapidly rising selling costs on the one hand and shrinking profits on the other. Maintaining sales margins, never an easy chore, will be especially vexing this year.

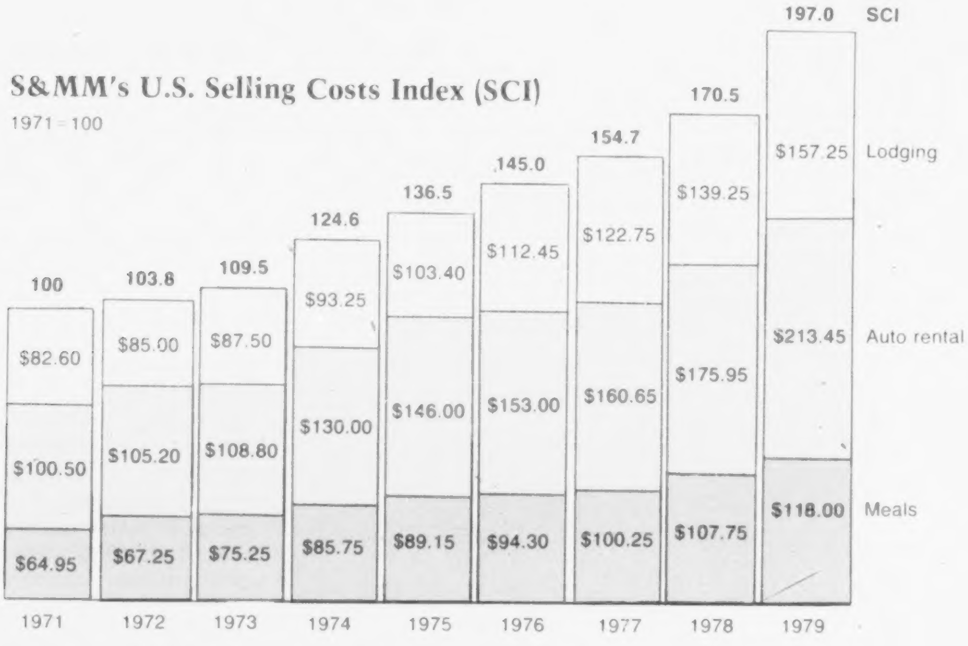
It's worth noting that, if a worst-case scenario develops

S&MM's SCI

The Selling Costs Index (SCI) is calculated by "costing out" a typical five-day week for a salesperson in each of the 80 U.S. metropolitan markets profiled in Section II (page 41). The salesperson's expenses are computed for his three basic costs: meals (including two drinks a day), single-room lodging, and auto rental plus 250 miles. (The rental rate assumes that the user purchases full insurance averaging $2 daily and is based on the published nondiscounted rate. If the user gets a corporate discount, it should be deducted from the average rental rates appearing in Section II.) Taxes and tips are not included because they vary too widely among markets (see Table II-3, page 55). Also excluded are intercity travel costs—air, rail, and bus—because they don't occur as often as the SCI cost factors.

An 80-market average is computed for each of the SCI's three components, and the three resultant figures are added for the overall U.S. total.

In 1979, a typical week cost $488.70. The base year for the SCI is 1971, when a typical week's costs came to $248.05. The Index is derived by dividing the current year's dollar total by the base year's equivalent.



S&MM's U.S. Selling Costs Index (SCI)

1971 = 100

Source: *Sales & Marketing Management's 1980 Survey of Selling Costs*

Sales & Marketing Management

later in the year, the upward ascent of the SCI could top last year's rate. Such a scenario involves the following inflationary pressure points:

- OPEC countries offset slower growth in Western economies by restricting output, thus preventing any appreciable decrease in the cost of imported oil.
- Presidential candidates, offering election-year "pork" to special-interest groups, pressure the Federal Reserve to loosen its tight monetary policies.
- A jingoistic Congress increases defense spending even more than the substantial 12% called for in the Administration's proposed budget.
- Business and labor, convinced mandatory wage and price controls will be imposed later in the year, strive to "get theirs while the getting's good."

Under these conditions, the federal government's consumer price index (CPI) would top last year's 13.3% growth. It's worth remembering that since 1974 the SCI has grown faster than the CPI every year, by an average 1.8 points. If this pattern continues through 1980, a 14% increase in the CPI implies an approximate 16.0% growth in the SCI.

Casting a shadow over 1980's field-selling costs picture is this: last year, two of the three components increased substantially faster than their long-term rates. While the 9.4% gain in meal tabs was just under their annual 10.8% increment in the 1972–78 period, lodging's 12.9% surge was well above the annual 8.6% rate of gain. Auto costs skyrocketed 22.7% last year vs. a long-term 13.1% rate.

Marketers fared much better as far as those costs that they control directly are concerned. Compensation as a share of sales, for example, was pushed down from 3.1% in 1978 to 2.3% in 1979 among consumer-goods companies; from 2.7% to 2.6% among industrial-goods concerns. Consumer-goods outfits also trimmed their T&E as a share of sales from 1.1% to 0.7% while industrial companies shaved theirs from 1.1% to 0.8%.

Even so, compensation trends the last several years have displayed significant cross-currents that will warrant closer management attention in the future. For one thing, compensation gains in the consumer sector have raced

SURVEY HIGHLIGHTS

Regional per diem Selling Costs Indexes

Region	1979 Per Diem Costs	% Gain 1978–79	Selling Costs Index (1972 = 100)
Northeast	$104.65	18.8%	200.4

ahead much faster than in the industrial area:

Sales Type	Annual Salary Increase 1972–78 Consumer	Annual Salary Increase 1972–78 Industrial
Sales trainee	8.2%	5.7%
A&B salesperson	13.3	7.6
Senior salesperson	12.1	7.1
Sales supervisor	13.6	8.9

Except for the A&B salesperson, the differences became even more pronounced last year. According to the American Management Assns.' annual *Sales Personnel Report*, consumer-goods sales trainees enjoyed a 25.3% salary boost vs. 5.4% for their industrial peers; senior salespeople a 41.5% gain vs. 7.2%, and sales supervisors a 25.8% increase vs. 2.8%. Among A&B salespeople, the consumer type suffered a 0.6% dip while his industrial counterpart gained 6.0%.

As a result, the significant income superiority that industrial salespeople once held over their consumer-goods peers has largely vanished. This suggests that industrial companies that traditionally boast of the more sophisticated selling required for their products are not matching their talk with commensurate income rewards.

Industrial senior salespeople earned $2,705 more than their consumer counterparts back in 1972, but last year they pulled in $4,625 less. And industrial sales supervisors, over the same period, saw their $3,420 salary edge turn into a $921 deficit. Industrial sales trainees still enjoy an income plus, but it narrowed from $810 to $750. A&B industrial sales-

CANADA

A modest rise in selling costs

Oh, to be in Canada, the U.S. marketer may wish, where the Selling Costs Index (SCI) rose only one-third as fast as it did in this country. Canada's SCI, an exclusive Sales & Marketing Management index, was up a modest 4.8% in 1979 vs. a staggering 15.5% escalation in the U.S. The Canadian SCI reflects a salesperson's typical five-day week in that country's six major metropolitan markets.

The contrast between the two countries was a dramatic turnaround from 1978, when Canada's SCI rose one-third faster than the U.S. equivalent. Canada's improved performance was primarily due to a fractional decline in auto-rental tabs, which had shot up 12.3% in 1978. Meal costs were up 7.9%, about the same as the year before, while lodging expenses rose 7.6% vs. 12.4% in 1978.

Increases in Canadian field selling costs*

	1979	1978	% Change
Food & drink	$146.25	$135.50	+7.9%
Auto rental	163.25	164.90	−0.1
Lodging	201.50	187.25	+7.6
Total	**$511.00**	**$487.65**	**+4.8%**

people, alone, have not been affected by the trend, increasing their salary margin from $2,705 to $4,625.

If industrial concerns trailed in the salary sweepstakes last year, they spent more freely in the two other important areas. Their salary offers to college graduates, according to the College Placement Council (see page 64), rose 11.7% in 1979 vs. 9.4% for consumer outfits. And their sales training budget per trainee shot up 22.9%, to $19, 025, dwarfing a 16.2% rise by consumer companies, to $13,173 (see page 68). In both cases, the training increments were comfortably above the long-term 6.3% rate.

However, the intense competition for college graduates is sowing the seeds for another compensation problem that will plague marketers in the future. Back in 1973, the salary offer to college grads joining industrial companies was 25% below the salary paid to A&B salespeople, the next step up from the trainee level. Last year, the spread had shrunk to only 1%.

The gap has slimmed in the consumer field, too, but not as sharply. What was a 26% spread between college grad and A&B salesperson in 1972 had shrunk to 15% by 1979. Obviously, marketers will have to make some hard choices in the near future between tempering their monetary lures to college grads or improving their compensation programs for those salespeople who have already proved their professionalism. There will be no easy solutions to this problem because, as S&MM's Special Report on the 1980s ("The Marketer's Complete Guide to the 1980s," S&MM, Dec. 10, 1979) revealed, the supply of first-time jobseekers, the pool from which trainees are drawn, will shrink dramatically as the result of demographic shifts.

But, then, as the data in the following section attest, there are no easy answers to the trying selling cost management problems that marketers will confront in 1980. ■

WE HAVE A BRAND NEW CONVENTION CENTER FOR WORKING.

AND ALL THIS FOR PLAYING:

A world famous spa
5 golf courses
A private ocean beach
37 tennis courts

They're all exclusively for your group of 200 or less. Because only one group meets at Palm-Aire at a time, regardless of the size. Over 15,000 square feet of meeting space waits for people who expect luxury. Even during meetings.

We have a full range of convention centers, seminar rooms and meeting suites. Each equipped with the newest acoustical and lighting systems. The finest personalized service for large groups or small.

When you're not meeting at the conference table, meet on one of our five golf courses. By the swimming pool closest to your room. Or at one of our four fine restaurants with four different atmospheres and menus.

Find out how to motivate your people. Call Saul Chato, Vice President, Hotel Sales & Marketing, toll-free at (800) 327-4960. From Canada or Florida call (305) 972-3300, collect.

How the Survey can boost bottom-line results

Data are data are data, but in the *Survey of Selling Costs* they become actionable information, giving the marketer the capability of managing, budgeting, and monitoring his field selling costs with greater efficiency.

The information in the *Survey*'s five statistical sections can be used on different levels, from a broad evaluation of overall cost management down to an analysis of a single market. The data may also be used at various stages of the management cycle, from planning the sales budget to a post-period evaluation of sales force performance.

The marketer who wants a quick reading on how efficiently he managed his overall selling costs in 1979 can refer to the Selling Costs Index (SCI), a measurement of the typical salesperson's basic weekly expenses in a metropolitan market (page 12). If the marketer's basic field-selling costs—meals, lodging, and auto rental—rose more last year than the SCI did (15.5%), it suggests that he did not perform as well as industry in general.

Determined to uncover the source of his costs problem, the marketer may then check the table on regional SCIs (page 12). Matching his own administrative records against the increases shown for each region, he learns where his own expenses advanced faster or slower than average.

The regional SCIs have another asset, too. The middle- or smaller-sized company that sells in only a part of the country can pick the applicable regional SCI and use it in the same way a national company uses the U. S. figure.

Once the comparison between internal records and regional SCIs points him in the right direction, the marketer then may zero in on his problem by consulting the per diem expenses detailed for 80 metropolitan markets in Section II (page 41). Here, he can match his own per diem totals for individual markets with those reported in the *Survey* (after dividing his total costs by the number of sales personnel to get an average for each market). Or he can compare each market's year-to-year percentage change shown in the tables with what happened to his own costs. Those markets where his own costs increased much faster than the percent change shown in the *Survey*

SURVEY HIGHLIGHT

High-cost markets and low-cost markets

The 10 highest-cost markets retained the same sequence in 1979 as they had the year before. New York, to no one's surprise, continues to lead the list, with per diem expenses (lodging and three meals) that are more than two-thirds above the U.S. average. There was an even split among the 10 markets as to how their per diem indexes changed—5 enjoyed an improved index while an equal number suffered a poorer index.

One newcomer joined the list of the 10 lowest-cost markets—Wichita, Kan., now the fifth-ranking such market. Fargo-Moorhead, N.D.-Minn., displaced Greenville-Spartanburg, S.C., as the lowest-cost market when its per diem index dropped four points while that of the Southern market rose one point. Leaving the select list are two Ohio metropolises—Canton and Dayton.

Highest sales costs

Omaha, Neb.	82
Boise, Idaho	83
Davenport-Rock Island-Moline, Iowa-Ill.	83
Memphis	83

should be prime candidates for further analysis.

Of course, the *Survey*'s data are not an end in themselves. Rather, they must always be considered in the light of special factors that apply in a particular situation. For example, the marketer may know that his per diem expenses in a certain market will necessarily be much higher than the *Survey*'s total because of an unusual concentration of big-volume customers and the salesperson's desire to maintain a first-class image with them. Similarly, a particular market may have experienced a much bigger year-to-year percent increase than indicated in the *Survey* because of an enlargement of the sales force.

The metro sales costs section can also be used to plan an expense budget as well as monitor sales force performance during the budget period. The per diem index is a helpful guide in allocating the total

SURVEY HIGHLIGHT

Where sales costs are rising the fastest

Inflationary rises in per diem metro sales costs struck all regions of the U.S. in 1979. Among the 12 markets with the fastest increase in combined lodging and meal tabs, 5 are in the Northeast, 2 in the Midwest, 3 in the South, and 2 in the West. Overall, the 11.5% jump in metro sales expenses was somewhat faster than the long-term 9.9% rate in the 1972–79 period.

Detroit had the dubious distinction of being hit with the sharpest increase in daily expenses, 16.0%, which was considerably above the market's long-term 11.4% rate. For Detroit and Dallas, it marked the second straight year when they were among the markets with the fastest rise in sales costs. The appearance of four markets—Pittsburgh, Philadelphia, Albuquerque, and Bridgeport-Stamford-Norwalk-Danbury—is somewhat surprising because their annual percentage rises are below the national average.

Someone has been making a lot of noise lately about being best-read by design engineers.

Now, that sounds impressive.

But it's not very true.

Because best-read and most-preferred is what Machine Design is. And has been for 23 straight years.

To prove our point, we can show you dozens of independently conducted research studies that prove Machine Design is significantly better-read and more-preferred than our competition.

In fact, one of their own studies shows the same thing.

Better yet, to encourage you to prove to yourself that Machine Design is the best read and most preferred design engineering publication, we'll put up $800 toward the cost of conducting your own readership study.

The study can be conducted by an independent firm over the circulation lists of Machine Design and our competitor, and can include your target companies and prospects.

Since our competitor is so sure of their claims, we're sure they'll want to ante up too.

DON'T KEEP YOURSELF IN THE DARK.

These advertisers couldn't resist our offer. And more are taking us up on it every day.

Why?

Because they're tired of conflicting claims and fuzzy facts. They want to find out for themselves, what the best read design magazine is. Because that's where they know their advertising will work best.

And you know, they're proving to themselves what we've been saying all along. That Machine Design is the best read design publication by far. That it's preferred by design engineers two to one.

Why not shed some light on the situation. If you want to see what these advertisers learned, or take us up on our offer, let us know.

Call your Machine Design Representative today.

A Penton IPC Publication

budget according to the relative costs levels of individual markets. Once an average expense per salesperson is calculated for the total sales force, the figure is adjusted by the index; then the resultant figure is multiplied by the number of salespeople in each market (see the accompanying table).

As the year progresses, the marketer can develop monthly totals from salespeople's call reports to determine whether expenses-to-date are adhering to budget norms. Again, some allowance for deviations should be built into the monitoring system lest sales force morale be impaired. Many marketers follow a "management by exception" rule, whereby the computer signals an "alert" only where expenses depart from the budget by more than, say, 10%.

The information in each section of the *Survey* provides insights into more efficient costs management. The data in Table IV-4 (page 73), when converted to a per person basis, reveals that a sales meeting, compared to an all-U.S. average, costs 29% more in New York City and 28% less in Indianapolis. The projections in Table V-6 (page 90) show that a marketer who relies heavily on spot TV will have to spend 12% more this year just to buy the same amount of time he employed last year. A marketer who is strong on sales incentives can look at Table V-5 (page 89) and see that his competitors plan to spend 12% more on such motivation programs this year.

Each section of the *Survey*, then, makes its own contribution to the more efficient management of field selling costs, which in the long run adds up to improved bottom-line results.

Planning a sales expense budget

Market	*Per Diem Index*	*Number Of Salespeople*	*Expense Budget: Unadjusted*	*Expense Budget: Adjusted*	*Targeted Sales Volume*	*Expenses As % Of Sales*
Dayton	85	2	$ 8,728	$ 7,418	$ 20,000	37%
Indianapolis	95	3	13,092	12,438	36,000	35
Kansas City	111	4	17,456	19,376	48,000	40
Milwaukee	99	4	17,456	17,280	44,000	39
St. Louis	101	8	34,912	35,264	80,000	44
Wichita	81	1	4,364	3,535	12,000	30
Total	**100**	**22**	**$96,000**	**$95,311**	**$240,000**	**40%**

Note: Details in "Unadjusted" column do not add to total due to rounding.

With a targeted sales volume of $240,000 for the month, the marketer allocates 40% of it to field selling expenses, or $96,000. That equals $4,364 per salesperson. Multiplying that figure by the per diem index results in an expense budget that reflects market differences in selling costs.

AN S&MM EXCLUSIVE

A letup in the rise of sales call costs

BY THAYER C. TAYLOR
Editorial Director
Survey of Selling Costs

As inevitable as death and taxes, the cost per sales call continues to rise. The upward trend, however, wasn't as brisk in 1979 as in 1978 when double-digit increases prevailed.

Sales engineers aside, the categories of sales types used in Sales & Marketing Management's exclusive estimates (see box for definitions) showed significantly smaller increases in call costs. Sales engineers, who consistently have the highest call costs because of the complexity of their business, saw call costs rise 8.8% to $37, which was close to their 9.7% increase in 1978.

The five types of salespeople

These are the five categories of salespeople studied in S&MM's annual Survey:

Account representative—A salesperson who calls on a large number of already established customers in, for example, the food, textiles, apparel, and wholesaling industries. Much of this selling is low key and there is minimal pressure to develop new business.

Detail salesperson—A salesperson who, instead of directly soliciting an order, concentrates on performing promotional activities and introducing products. The medical detail man, for example, seeks to persuade doctors, the indirect customers, to specify the pharmaceutical company's trade name product for prescriptions. The firm's actual sale is ultimately made through a wholesaler or direct to pharmacists who fill prescriptions.

Sales engineer—A salesperson who sells products for which technical know-how and the ability to discuss technical aspects of the product are extremely important. The salesperson's expertise in identifying, analyzing, and solving customer problems is another critical factor. This type of selling is common in the chemical, machinery, and heavy-equipment industries.

Industrial-products salesperson, nontechnical—This salesperson sells a tangible product to industrial or commercial purchasers; no high degree of technical knowledge is required. Industries such as packaging materials or standard office equipment use this type.

Service salesperson—A salesperson who sells intangibles, such as insurance and advertising. Unlike the four preceding types, those who sell services must be able to sell the benefits of intangibles.

Year-to-year increases by the other sales types slowed appreciably in 1979. Per-call costs for account representatives rose only 6.7% vs. 20.0% in 1978; detail salespeople, 6.3% vs. 14.3%; service salespeople, 6.3% vs. 14.3%; and industrial-products salespeople, 5.0% vs. 11.1%.

Significantly, the two components of total direct sales costs from which per-call costs are derived—(1) compensation and (2) automobile and travel and entertainment (T&E) expenses—showed dramatic contrasts. The compensation trends among the five sales categories were remarkably uniform, but the year-to-year changes in expenses varied considerably.

Compensation gains moved within a very narrow range, from the sales engineers' 7.8% improvement to detail salespeople's 8.7%. In contrast, increases in auto and T&E expenses ranged from a modest 0.6% for account representatives to a staggering 16.0% for sales engineers.

Compensation gains broke with tradition among three of the sales types. Over the 1974–79 period, compensation increases have consistently trailed the increases in auto and T&E expenses for all five sales types. However, last year compensation increases outpaced expenses for account representatives, detail salespeople, and service salespeople.

The information used in developing S&MM's exclusive cost-per-sales-call estimates are mainly derived from the American Management Assns.' (AMA) annual *Sales Personnel Report*. This is supplemented

How Xerox Learning Systems can help your salespeople become more productive.

1 Help your salespeople make more productive use of their time.

Meticulous research across scores of industries indicates that the typical salesperson spends a shocking 4/5ths of his or her time not selling.

We provide a learning system which can show your salespeople how to maximize their own personal resources and abilities so that they can realistically commit themselves to make more productive use of their time. Time required? One day (plus two hours advance preparation). Productivity lift? Field research has shown that sales teams who use this approach consistently outperform those who do not by an average of 43%.

2 Help your salespeople concentrate on heavy-hitters rather than bluebirds.

Practically every organization is plagued by the problem of salespeople who often avoid a key prospect because they are intimidated. That's because they often lack the skills necessary to feel justifiable confidence in such a selling situation. Result? All too often they waste their time calling on bluebirds when they could be closing heavy-hitters. This is intolerable, when you consider that the cost of the average sales call, whether productive or not, has surpassed $100.

We provide a learning system that teaches how to select, approach and sell the key prospect. Building such skills boosts confidence for recruit and veteran alike.

This approach to concentrating on prospects with the highest potential yield has been proved out by numerous organizations – including 357 of the Fortune 500. You should arm your salespeople with these skills. They'll be much more likely to seek out and close heavy-hitters.

3 Help your salespeople learn how to listen to prospects and customers.

Effective listening is key in any selling situation. Yet listening experts report that most salespeople tend to lose more than 66% of what they hear within minutes.

That's why we pioneered a learning system to develop effective listening. Over the years it has helped more than a million people learn how to be better listeners – and responders. This system can make all the difference in selling a prospect and in keeping a customer. That's only logical. Wouldn't you favor the salesperson who really listened to you over the one who didn't?

4 Help your salespeople learn how to overcome objections and cut through the stall.

All too often salespeople cave in when they hear an objection. Result? Failure. Or worse, an ongoing stall.

We have developed a learning system which can show your salespeople how to professionally deal with an objection and how to cut through the stall to get the sales interview moving productively again.

5 Help your salespeople learn how to close.

We provide a learning system which can help your people become up to 46% more likely to close. They'll learn how to translate product or service features into benefits that appeal to customer needs. How to build a climate of consensus that makes asking for the order totally appropriate. How (and how often) to move to a close.

6 Help your salespeople become more productive with your key clients.

The most important source of new business is the accounts you already have. To develop the account for maximum yield, your salespeople must have a precise understanding of the client's needs and devise and continually update the account plan. In short, what is needed is an advance beyond the techniques of basic face-to-face selling skills. We have designed a new learning system for your advanced salespeople. It can help them learn how to develop and penetrate their accounts much more productively.

Such consultative presence increases yield and client loyalty. Indeed, wouldn't you insist on such presence if you were in the client's shoes?

7 Help your salespeople with action.

by telephone calls to companies in each of the five categories for verification of the year-to-year shifts indicated by AMA data.

Certain changes in methodology were made this year to enhance the reliability of the cost-per-call estimates. Previously, the compensation and expense statistics for Table I-2: Direct Sales Costs (below) were based on the lowest and highest averages provided by all respondents in AMA's survey. This year, instead, only the lowest and highest salaries of the middle 50% (or two quartiles) of respondents were used.

In effect, then, the low end of the range shown in Table I-2 represents the lowest salary reported by the second quartile, and the high end the highest salary reported by the third quartile. This modification eliminates the wide salary extremes that occur when the responses from all respondents are included. The same procedural change was made in developing auto and T&E expenses.

Source: Sales & Marketing Management survey.

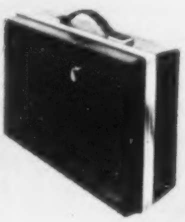
Because of these procedures and qualifications, S&MM's annual call-cost estimates differ sharply from those generated by two other well-known sources, McGraw-Hill Publications, New York City, and Dartnell Corp., Chicago, which report comparable estimates every other year. Dartnell's *Compensation of Salesmen: 20th Biennial Survey*, due this month, will report that cost per sales call was $71.90 in 1979. McGraw-Hill, which will conduct its biennial survey later this year, pegged call costs in 1977 at $96.79.

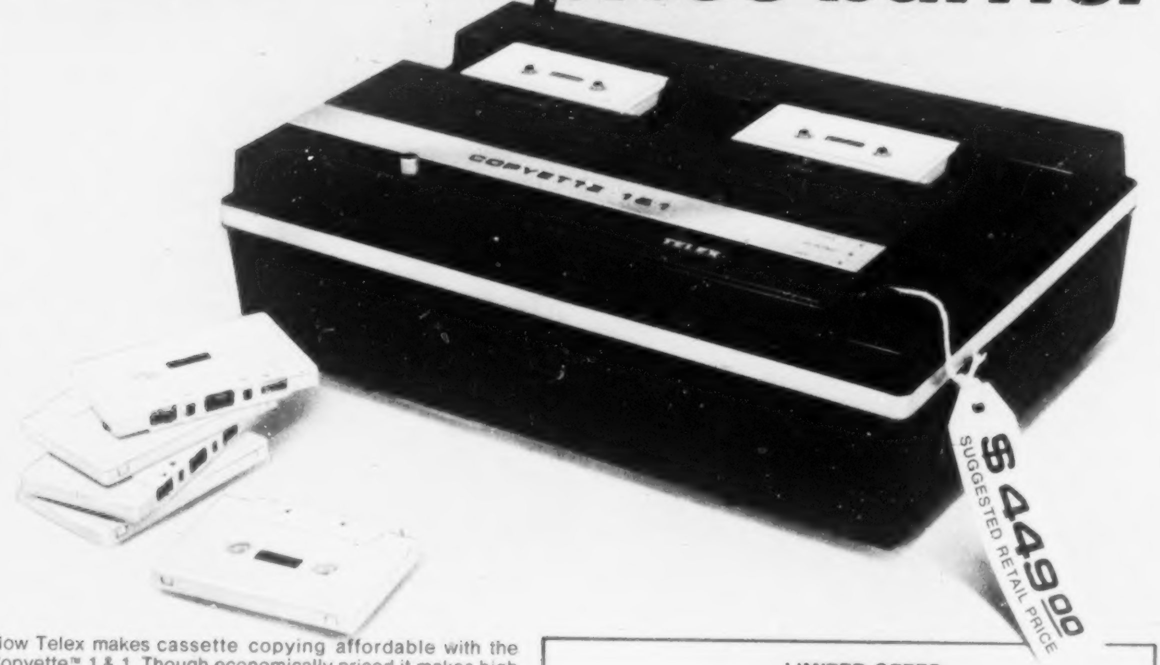
Interestingly enough, Dartnell's 1979 estimate represents a 21.7% rise over the $59.07 it reported in 1977. By and large, the increases in S&MM's call costs over the same two-year period cluster around this same rate of gain. Call costs of account representatives rose 28.0% between 1977 and 1979, while those of detail salespeople and service salespeople were up 21.4%, sales engineers 19.4%, and industrial-products salespeople 16.7%.

There are other differences, too, between SMM's call-costs estimates and those of the other two concerns. Some factors behind McGraw-Hill's higher figure: (1) it is confined to industrial-related salespeople and (2) includes salespeople with all types of territories, even those who make trips overseas to call on clients. Dartnell's call-cost estimate is below McGraw-Hill's because it includes salespeople for consumer-good industries (as does S&MM's), whose expenses are

Telex Portable Cassette Copier



breaks the price barrier



Now Telex makes cassette copying affordable with the Copyette™ 1 & 1. Though economically priced it makes high speed cassette copies of your training or orientation programs, lectures, even audio visual programs with slide sync cue tones. All on a cassette copier costing only half of what you used to pay for similar units. But, don't let the low cost mislead you. The Copyette 1 & 1 is made by Telex in the U.S. As the leading maker of cassette copiers and high speed tape duplicating systems we cannot afford to skimp on the quality you've come to expect from Telex. You can buy a Copyette 1 & 1 with confidence. Use it and you may discover that you can afford one for each department or branch. The Copyette 1 & 1 is portable, and so compact it fits practically anywhere, even under airline seats. And it's as easy to operate as an office paper copier. What could be easier? What could be more affordable?

MAKE AS MANY COPIES AS YOU NEED
—WHEN YOU NEED THEM—

less than those of their industrial counterparts. Like McGraw-Hill, Dartnell includes all types of territories.

Furthermore, Dartnell and McGraw-Hill both develop their estimates from mail surveys. While both firms provide definitions of call-cost components, there's no assurance that all respondents to each survey base their estimates of call costs on identical cost factors. S&MM's estimates are built from AMA data on three specific elements—compensation, auto, and T&E expenses—so there's a greater degree of consistency.

Most important, in contrast with the single average offered by the other sources, S&MM develops estimates for five broadly representative types of salespeople, enabling the marketer to select the figure most relevant to his operation. An overall average, by itself, can't properly reflect the widely varied types of salespeople and selling environments that make up the real world. It would be difficult to reconcile, in one comprehensive cost-per-call ratio, two such opposite types as, say, a sales engineer, who concentrates on developing solutions to complex customer problems, and an account representative, who sells mass-produced staples to an established customer base.

TABLE I-3

Service salesperson	R	13–23	22–45	16–29	28–56	22–39	37–76
	M	17	31	21	39	29	52

*R: Range
*M: Mean
NTE: Not typical experience.
Note: 5-day workweek based on 239 workdays, 4-day workweek based on 190 workdays, 3-day workweek based on 141 workdays. Each assumes an annual 15 days of vacation and 6 holidays.

Also, salespeople work in markedly different selling environments. A salesperson in a big city, where prospects are clustered together, spends a much greater portion of his time in face-to-face selling compared with his peer who, working a rural territory where prospects can be separated by vast distances, spends a greater share of his time travelling. Hence, S&MM uses two types of territories: Type A for metropolitan areas and Type B for nonmetro areas.

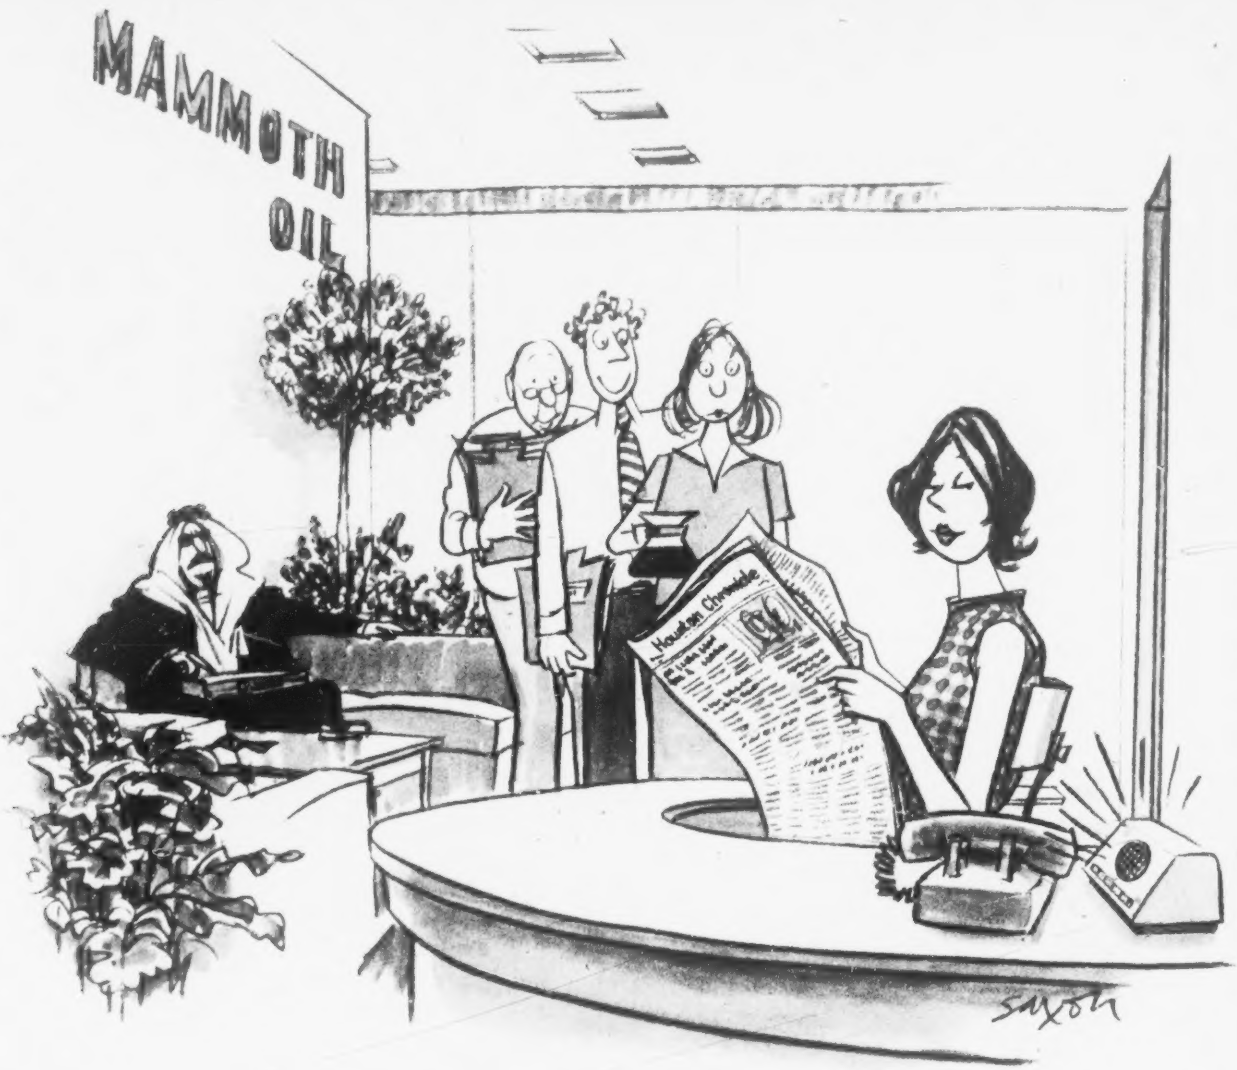
S&MM's cost-per-sales-call estimates are derived by dividing the number of calls the salesperson makes into his total direct sales costs (compensation plus auto and T&E expenses). If he makes 1,000 calls a year, for example, and has total direct costs of $10,000, his cost per call is $10.

Call patterns (Table I-1)

A sales call is a face-to-face contact between a salesperson and one or more buyers. Calculating the cost-per-call ratio starts with an estimate of the range in number of calls that are made, both daily and annually. This information is developed by S&MM and Technomic Consultants, a Chicago consulting company.

Direct sales costs (Table I-2)

Direct sales costs are limited to those that the salesperson and his manager can control, making the final call-cost ratio a more meaningful yardstick of performance. These include



"Get me coffee, get me the Saudi file, get me Ellsworth in Accounting, get me Najeeb in Kuwait. And where's my morning Chronicle?"

When you're trying to reach the people who get things done in the Southwest, The Houston Chronicle is the place to advertise.

The Chronicle leads Houston in daily and Sunday circulation. And in retail, general, classified and total advertising.

Each edition of The Chronicle is filled with the latest national and business news, articles from The New York Times, The Washington Post and The Los Angeles Times, and the regular special features of the paper, whether it's on the newsstand in the morning, or on the front lawn in the evening.

Houston Chronicle

compensation, auto expenses, and T&E (which embrace food and lodging). Such elements can vary considerably among the five sales types, reinforcing the need for developing call-costs estimates for different sales categories.

Cost per call (Table I-3)

The factors behind S&MM's preference for call-cost ratios by type of salesperson, as opposed to a single, all-inclusive average, are demonstrated by, first, the spread in such ratios between the five types, and, second, contrasting rates at which they are increasing.

Effective call days (Table I-4)

To make the call-cost information even more useful, S&MM provides a range of ratios based upon the salesperson's work patterns. By converting the cost ratios to applicable three-, four-, or five-day call patterns, the data reflect that salespeople are at different levels of expertise in managing time and territory, as well as planning call patterns and executing the call function.

A cautionary note: Although cost per call is a valuable monitor, it should not be used exclusively for evaluating a salesperson's effectiveness. Sales productivity is as much a function of profitable sales volume as per-call costs, and the manager must consider both elements in assessing the individual's productiveness. And, as the following section demonstrates, even a call-cost ratio itself must be tempered by the nature of local markets. ■

How to create your own cost-per-call efficiency index

S&MM's cost-per-call data can help you evaluate the effectiveness of your own management of this critical cost-ratio. Because the data are detailed for types of salespeople and selling situations, they are most helpful if you develop your own **Sales Call Efficiency Index** that you can then use to monitor the efficiency of your field sales force.

1. Call patterns. Information on your salespeople's call patterns (Table I-5) can be gained either by totalling the number of calls listed on call reports or by multiplying the average number of calls per day by the number of days salespeople spend in the field.

2. Direct sales costs. Unless you keep your own records, company financial records will provide much of the information on direct sales costs (Table I-6). They can be supplemented by the sales force's expense accounts, as well as the Metro Sales Costs (page 41) and Transportation (page 95) sections.

3. Cost per call. Using the summary data from the first two tables, you calculate cost per call (Table I-7) by dividing the salespeople's number of calls into their total direct sales costs. If you want to make the sales force more aware of this critical ratio, you can redesign the format of your call reports so that individuals can compute their own cost per call each time they submit a report.

4. Territory concentration factor. No two territories are exactly alike because of differences in geography, number and type of accounts, and industry concentration or dispersal. You can compensate for this diversity by assigning "weights" to the salespeople or territories being compared. Here, you first develop an average number of calls per day for your entire sales force; that figure represents the norm. Then, using the Territory Concentration Factor (Table I-8), which shows the statistical relationship between a set of common numbers, you "equalize" the differences in the number of sales calls. That is, it compensates for the differences where one territory averages eight calls per day, another, only four.

Next, you adjust for the difference in selling and living costs between the markets. A step-by-step procedure, comparing the Newark, N.J., and Boise, Idaho, markets, is provided on page 36.

TABLE I-5

How to compute your salesperson's call patterns

		Estimated Calls Per Year

Step-by-step sequence in building a sales call efficiency index

TABLE 1-9

Sales call efficiency index

	Total Direct Sales Costs	Annual Number Of Sales Calls	Unweighted Cost Per Sales Call	Territory Concentration Factor (TCF)	Per Diem Index*	Sales Call Efficiency Index	**Weighted Sales Call Efficiency Index**
Boise	$25,000	956	$26	1.40	83	$22	**$20**
Newark	$31,000	1,912	$16	0.77	121	$17	**$20**

*As indicated in Section II Metro Sales Costs

In order to compare cost-per-call ratios of different sales territories equitably, variances between local markets must be considered. This hypothetical example analyzes two different markets: Boise, Idaho, with below-average per diem costs, and Newark, N.J., with above-average per diem costs.

The Boise salesperson has direct sales costs of $25,000 and makes 956 calls a year, while the Newark salesperson has direct sales costs of $31,000 and makes 1,912 calls. Thus the **Unweighted Cost Per Sales Call** in Boise is $26.15 ($25,000 ÷ 956 = $26.15) compared with $16.21 in Newark ($31,000 ÷ 1,912 = $16.21). At first glance, it appears that the Newark salesperson is managing his expenses much better than his Rocky Mountain counterpart.

However, a fair evaluation of the relative performance of each salesperson must recognize that Boise and Newark are two distinctly different markets. A first step toward developing a **Sales Call Efficiency Index** that compensates for these differences involves the Territory Concentration Factor (TCF) (Table I-8). Assuming the entire sales force averages seven calls per day, and using the table to relate each salesperson's calls to that number, the TCF of Boise's 5 calls per day is 1.40 while that of Newark's 9 calls is 0.77.

Next, the Metro Sales Costs section (page 41) reveals that Boise's per diem index is 83 and Newark's is 121. Dividing each number into 100, the all-U.S. norm, yields a factor of 1.20 for Boise and 0.83 for the Eastern city.

$$\text{Sales Call Efficiency Index} = \frac{\text{Direct sales cost}\ \dfrac{(100)}{(\text{Per diem index})}}{\text{Calls/year (Territory Concentration Factor)}}$$

For Boise, the calculation is as follows:

$$\frac{\$25{,}000\ (1.20)}{956\ (1.40)} = \frac{30{,}000}{1{,}338} = \$22.42$$

For Newark: $$\frac{\$31{,}000\ (0.83)}{1{,}912\ (0.77)} = \frac{25{,}730}{1{,}472} = \$17.48$$

With these data in hand, it is now possible to construct a **Sales Call Efficiency Index** for each territory using the equation illustrated above. This reveals that, on an adjusted basis allowing for market differences, the cost per call in Boise is $22.42 and in Newark, $17.48. What was a $10 difference has been cut in half.

Weighted to balance geographical differences in the cost of living

For Boise: $$\frac{\$18{,}000 + \$7{,}000\ (1.20)}{956\ (1.40)} = \frac{26{,}400}{1{,}338} = \$19.73$$

For Newark: $$\frac{\$21{,}500 + 9{,}600\ (0.83)}{1{,}912\ (0.77)} = \frac{29{,}468}{1{,}472} = \$20.02$$

The adjusted index can be further refined by allowing for living costs differences. In this example, the Boise salesperson has a base salary of $18,000 plus $7,000 for expenses, while the Newark salesperson has a base salary of $21,500 plus $9,600 for expenses. Using the above equation—multiplying each individual's expenses by the per diem factor mentioned earlier (1.20 for Boise, 0.83 for Newark)—results in a **Weighted Sales Call Efficiency Index** of $19.73 for the Boise salesperson and $20.02 for the Newark salesperson.

And the cost of competing is heading up.

Pay the Traveletter way: Field people have more freedom. Controllers have more control.

Traveletter Payment Systems simplify, control and speed up every payment in the field.

Over half the top Fortune 250 companies have found how Traveletter pays: The home office tracks *every* payment with *less* paperwork. Large sums aren't tied up in cash advances. And field people have a feeling of mobility and freedom . . . the better to sell and service in today's economy.

Traveletter Travelorders replace cash, checks and credit for instant reimbursement of expenses. Your people never worry about overdue expense checks . . . never are stranded out of town anywhere in the world.

Rapidrafts are like instant checks for on-the-spot payment of any obligation.

Think of a retail promotion. Think of the impact and good will when the payment is produced instantly (and not six weeks later in the mail).

Payment Control and Information System (PCIS)
PCIS is an automated system that runs on your computer. It tells you the where, how, why and to-whom of every payment your company makes. When you know where your money is going, you know where your company is going.

Every day of the year, on average, another major company chooses the Traveletter way to pay. Let us help cut your field "overhead." Call 612-944-4767 and we'll put you in touch with our manager in your area.

The way to pay. Today.

Step-by-step sequence in preparing a sales costs budget

(Bold-faced numbers in the drawing refer to explanations in adjoining column)

Step-by-step sequence in preparing a sales costs budget

TERRITORY PERIOD

1 Major Cities	2 Forecast Sales	3 Budgeted Salaries	4 Lodging	5 Food And Drink	6 Auto Rental	7 Misc (Parking Taxi Tips)	8 Entertainment	9 Other Travel	10 Promotional	11 Total City Expenses
	FORECAST OF FIELD SELLING EXPENSES									
12. Total	$									
13. % Total/ Territory	%		%	%	%	%	%	%	%	%
14. Total Territory	$									
15. Budgeted Salaries	$									
16. Forecast Expenses	$									
17. Total Expenses	$ −	Forecast Sales	$ =	Gross Dollar Return On Sales	%					

1. List the major cities in your territory that are included in *Section II: Metro Sales Costs.*

2. Enter the forecast sales for each city.

3. List in total only the budgeted salaries of the territory sales manager and salespeople as fixed costs.

4. Estimate the number of nights to be spent in each city and multiply by the lodging averages shown in Section II.

5. Estimate the number of meals and drinks per day in each city (S&MM assumes an allowance of two drinks per day per salesperson) and multiply by the appropriate food and drink medians that are shown in Section II.

6. If an auto will be rented, estimate the number of miles per week. *Multiply* the number of days by the rate per day, *add* the sum of the number of miles times the rate per mile, *add* insurance of $2 per day, and subtract your company discount (if any). Auto-rental data are in Sections II and VI.

7. Estimate the miscellaneous expenses.

8. Add entertainment costs by multiplying the dinner and drink rates (for each city) by the number of clients or customers entertained.

9. Estimate other travel expenses—air, train, or bus fares—that may be incurred in trips to the home office or to sales meetings.

10. Estimate promotion expenses by including advertising, sales promotion, trade shows, meetings, and so on that may be charged to the territory.

11. Total expenses across columns 4 to 10 to derive expenses by city.

12. Total all expenses shown in columns 4 to 11.

13. Calculate the percent of the territory's sales that will be accounted for by total sales of the cities listed; do the same for expenses. *A possible short-cut:* Assume that a city's percentage of total territory sales will be the same as its share of total territory expenses.

14. Enter the expected total sales of the territory.

15. Enter total budgeted salaries.

16. Enter total forecast expenses for the cities from column 11. Total salaries and expenses should be adjusted for any overhead—rent, utilities, secretarial expenses—charged to the sales office.

17. Add salaries (item 15) and expenses (item 16). Subtract total expenses (item 17) from forecasted sales (item 12), giving the gross dollar return on sales. This gross dollar return can then be converted to a percentage figure by dividing by the forecast sales total. Comparing the percent shown here with your company's targeted profit ratio tells you if you are on target. If you are not, analysis of the data may suggest the reasons why.

Are You Using Your Sales Force for Product Retrieval?

With today's rapidly escalating selling costs, using your sales force is a very expensive and inefficient way to obtain retail product samples. Not only are the costs for automobiles, gasoline, hotels, meals, etc. climbing steadily but also a sales professional's time is much too valuable to use for anything other than direct selling-related activities.

The Nielsen Product Pickup Service offers a sensible alternative. For a quick, reliable means of gathering and shipping retail product samples --- for less than it's costing you to use your sales force --- contact your nearest Nielsen office or . . .

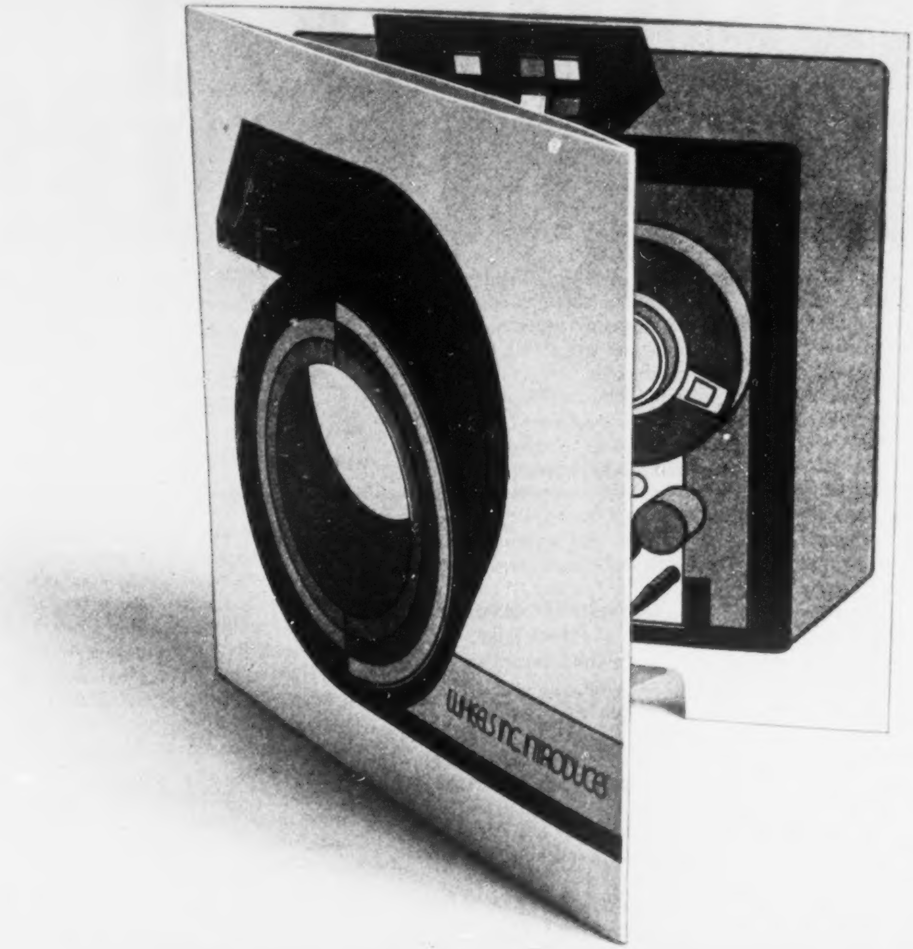
IT'LL COST YOU NOTHING TO READ IT.



IT COULD COST YOU PLENTY NOT TO.

Although our new booklet costs you nothing, it could prove of enormous value to your company.

Because it introduces some completely new thinking about auto fleet leasing. It sets forth a new approach to the handling of ordering, billing, delivery, licensing, registration, used car disposal.

If you're not presently leasing, you'll get a fresh insight into why you should be. If you are leasing, you'll be able to evaluate the service you're getting. And not getting.

Our booklet is brief and concise. But the principles in it could save your company many thousands of dollars. For many years to come.

Use the coupon to send for your copy. Our booklet costs nothing, but you'll find it's worth quite a lot.

SELL YOUR EXCESS INVENTORY AT FULL WHOLESALE!

There is another way for companies to sell excess inventory. An alternative that provides for immediate sale at full value. That helps generate corporate cash. That gives management better financial control. That alternative: The Tradewell Trade.

If your company is facing an excess inventory problem or you see one looming, you should know about the services of Tradewell Industries.

"We serve as a trading partner for companies that want to avoid costly markdowns of excess inventory. And **The Tradewell Trade** is a simple, uncomplicated, efficient transaction to accomplish that end," explains Tradewell President William S. Steinberg.

"We purchase merchandise at the regular wholesale price. Payment is made in the form of trade credits which our clients use to reduce the cost of television and radio advertising, premium and sales incentive programs, printing, and various other marketing services."

"Since our clients have already budgeted for these services, the use of trade credits represents considerable cash savings."

Full value credit is one reason why a growing number of companies are using the Tradewell Trade. Here are some other reasons:

No inventory problem is ever too big or complex.

To date, Tradewell Industries has entered into trading transactions that have ranged in dollar value from our minimum of $100,000 to as high as $5,000,000. Our average transaction is $500,000.

These transactions have involved a broad range of products, both consumer and industrial, for a broad range of clients.

Many Fortune 500 companies and their subsidiaries have turned to The Tradewell Trade to solve inventory problems. So have many smaller companies bent on reaching that list. Regardless of the size of your company or the size of your inventory problem, Tradewell Industries can help you.

Careful product distribution.

At Tradewell, our objective is to complement, not compete with a client's established distribution methods. To do this, we use a number of channels. These include: sales promotion, premium and incentive programs, the export market, direct response programs, the PX market, company stores and mass merchants.

Media and promotion specialists.

The professionals that staff our media department are among the most qualified in the industry today.

They concentrate on trading and placing client media needs. They provide in-depth demographic and rating analysis as well as comparisons of cost.

No media is placed without client approval. And we welcome the participation of a client's advertising agency.

Through our subsidiary, **Tradewell Merchandising Corporation,** we provide comprehensive sales promotion and merchandising services. These include: promotion planning and development, premium promotions, sweepstakes and contests and sales force and trade incentive programs.

The Tradewell Trade for financial control.

Barter transaction may afford your financial group considerable accounting flexibility. There are a number of alternative ways which may be available to you to report the transaction; you should seek your accountant's advice as to the most beneficial available alternative.

For many companies, The Tradewell Trade may be the perfect alternative for solving inventory and marketing problems and achieving better financial control. Tradewell would like to discuss this alternative with you.

If you are interested in learning more about barter from the leading trade specialists in the industry, call or write William S. Steinberg, President of Tradewell Industries Inc.
(212) 888-8500

**William S. Steinberg, President,
Tradewell Industries, Inc.:**
"In my talks with corporate management, I've found that a trade agreement does more than solve an immediate inventory problem. It opens new avenues for innovative and aggressive marketing."

Bristol, Conn.	**See Hartford-New Britain-Bristol, Conn.**							

*= flat or zone rate.

DEFINITIONS—**Lodging:** Single-room rates, excluding local taxes, are shown. Double-room rates are approximately 1.27 times greater. **Meal costs:** A 12.5% tip is included in each meal cost shown. In some cities, medians have slightly declined. This may be due to changes in the sample rather than changes in cost of meals. **B**—Menu prices for a breakfast consisting of two eggs, bacon or sausage, and coffee (and juice if it is part of the meal). **L**—Menu price for a lunch consisting of ground sirloin steak (not a sandwich) or a comparable entrée, potato, vegetable, and coffee (and salad, roll and butter, and coleslaw if part of the meal). **D**—Menu price for dinner consisting of 12-oz. sirloin steak, baked potato, salad, and beverage (and appetizer, soup, and dessert if part of the meal). **Per diem total:** Total one-day cost of lodging and meals. **Per diem increase:** Percent change from 1978 to 1979 in total one-day cost of lodging and three meals. **Per diem index:** A city's per diem total expressed as a ratio of the all-U.S. average (an index of 110, for example, means that the area's total cost is 10% above the national average). **Cost of two drinks:** Price for two martinis made from the bar's house liquor. **Airport to downtown:** Taxi fares shown include a 12.5% tip, but exclude the cost of extraordinary waiting time due to traffic delays. Information is for first city in metro area title. **Auto rental:** Costs are based upon the published nondiscountable daily rate of major companies. Applicable local gas charges for 50 miles have been added. Note: **Average** is the sum of the dollar amounts divided by the number of responses. **Median** is the dollar amount that has an equal number of responses above and below it.

Bell Helping You Manage Your Business Better

7 WAYS LONG DISTANCE CAN KEEP YOUR HEAD ABOVE WATER.

Getting that sinking feeling trying to cope with today's rising business costs? Well, our Bell System experts want to help by showing you the many ways your phone can save you money, expand your business, and improve your cash flow.

Read all about them to discover how Long Distance can improve your bottom line.

#1 A winning number is 800.

Your toll-free 800 Service number encourages people to react instantly to direct response advertising. And sales catalogs. This means you can immediately measure how effective your ad is.

In selling business-to-business, the 800 Service number encourages customers to call *you* when they need to replenish inventory. Result: easier ordering, faster order processing. This gives you a competitive edge.

And if your customer has a complaint, you discuss it, take care of it at once. It also gives consumers immediate answers—about product specs, retail outlets, service locations.

As for cost of service, you can get low rates on time units as little as 10 hours per month, with even lower rates on time exceeding ten hours. It's a good investment and gives you a lot of prestige.

#2 What WATS is right for you?

You don't have to be a biggie to have a WATS line. You can have an unlimited number of calls on outward WATS for as little as ten hours a month. Or as much as 240 hours each month FOR A SINGLE CHARGE. And you don't have to buy the whole country, just the zones you call across to do business. With the right WATS, you'll be able to improve customer service, avoid the high costs of inventory outages, speed up cash flow and lower your operating expense.

#3 How a phone number can be your "office" in another city.

Bell can show you how to do business in a distant city without the expense of a local office. With the help of RCF—Remote Call Forwarding—you won't need an office, equipment, or additional help.

Bell assigns your firm a local number in the city of your choice. Calls are automatically redirected to you. No waiting. No operator assistance. You will be surprised to discover that the cost for this service is remarkably low.

This means your customer is only a local call away. With RCF, you can open new markets, test them out, accept out-of-town orders, and improve customer service.

#4 Selling on the phone instead of on the road.

Gasoline prices and other travel expenses are on the rise. So sending salespersons out to get small orders from small accounts is a waste of time and money. Our Bell experts can help you keep those customers by teaching you special techniques.

You'll learn how to call periodically when inventory is down and the customer is ready to buy. You'll contact smaller accounts more frequently, and at a lower cost, than is possible with on-premise visits.

#5 Improving credit management.

Successful credit management is the key to cash flow. Our Bell experts have programs that expand your market, develop customers, build profits, and give you a better handle on fiscal control. You'll be involved with an overall strategy that will enable you to check the customer's ability to pay on time, calculate marginal risk, and collect overdue accounts.

#6 Turning an inquiry into a sale.

Turning an inquiring prospect into an active customer takes skill that your people might not have.

Our Bell experts can show you how to screen and qualify an inquirer's interest, and then take immediate and competent action. In no time you'll learn how to capitalize on a prospect's interest and need immediately—when he or she is most receptive to your offer. Effectively used, our techniques will help improve your sales AND profits.

#7 Phoning for new business.

Today you can actually telephone for new business—and get it, provided you use the right techniques. Our Bell experts can teach you how to shop for new customers by building primary and secondary lists. How to screen a prospect's interest before sending out material. And how to follow up a prospect after a mailing. As a result, you'll increase your market coverage or extend the territory you now cover at a fraction of your present sales costs.

Bell System

CALL 800-821-2121,

Ext. 907

toll free anywhere in the contiguous United States. In Missouri, call 800-892-2121, Ext. 907.

A BELL BUSINESS EXPERT WILL TALK TO YOU. You can expect to have a relaxed, friendly talk. You'll discover whether one or more of these Bell System programs can be a practical, profitable plus for your business. To help you, we'll need information. So we'll ask questions, like the ones listed below. No surprises, nothing you won't have the answer to. You'll find the discussion thoroughly enlightening and enjoyable.

Q. What is your product or service?

Q. How many accounts do you sell or service?

Q. What geographic area do they cover?

Q. How many locations does your business have?

Q. How many sales people do you have?

Q. What is your primary method of customer contact?

Q. What type of advertising/promotion do you use?

"Hey! I want to keep my head above water. Tell me how Long Distance can help me manage my business better."

Q. Do you use services other than your local lines, such as WATS?

Q. How do you test or expand market areas?

Q. On the average, how many accounts fall past due each month?

Q. How do you handle inquiries at present?

Q. Do you have plans to meet specific business objectives—such as increasing market share?

OR WRITE.

Fill in below or attach your business card and mail.

* = flat or zone rate.

DEFINITIONS—**Lodging:** Single-room rates, excluding local taxes, are shown. Double-room rates are approximately 1.27 times greater. **Meal costs:** A 12.5% tip is included in each meal cost shown. In some cities, medians have slightly declined. This may be due to changes in the sample rather than changes in cost of meals. **B**—Menu prices for a breakfast consisting of two eggs, bacon or sausage, and coffee (and juice if it is part of the meal). **L**—Menu price for a lunch consisting of ground sirloin steak (not a sandwich) or a comparable entrée, potato, vegetable, and coffee (and salad, roll and butter, and coleslaw if part of the meal). **D**—Menu price for dinner consisting of 12-oz. sirloin steak, baked potato, salad, and beverage (and appetizer, soup, and dessert if part of the meal). **Per diem total:** Total one-day cost of lodging and meals. **Per diem increase:** Percent change from 1978 to 1979 in total one-day cost of lodging and three meals. **Per diem index:** A city's per diem total expressed as a ratio of the all-U.S. average (an index of 110, for example, means that the area's total cost is 10% above the national average). **Cost of two drinks:** Price for two martinis made from the bar's house liquor. **Airport to downtown:** Taxi fares shown include a 12.5% tip, but exclude the cost of extraordinary waiting time due to traffic delays. Information is for first city in metro area title. **Auto rental:** Costs are based upon the published nondiscountable daily rate of major companies. Applicable local gas charges for 50 miles have been added.

Note: **Average** is the sum of the dollar amounts divided by the number of responses. **Median** is the dollar amount that has an equal number of responses above and below it.

Our top-of-the-line sales training program doesn't ignore your bottom line.

Training your people can run into a lot of money. Not to mention time and effort. Last year, the average company spent between $8,828 and $15,479* to train one salesperson.

At American Management Associations, we train your sales staff the way you would, if you had the time. And we do it for under $2,000!

Our program? It's **The Career Path Guide to Success** – one for Professional Salesmen *and* another for Professional Sales Managers.

The only pre-set career path of its kind.

A lot of companies offer management seminars; AMA is the only one to provide a complete **Career Path Guide.** An ongoing series of courses that carries a salesperson or manager through every stage of learning – from fundamental skillbuilders to more sophisticated levels of selling and managerial expertise.

Featuring a fully-certified Record of Completion.

At the end of the program (only 12 working days over a 2-year period), registrants receive a fully certified, permanent **Record of Completion.** Proof of achieving a recognized level of training for professional salespeople and managers across the country!

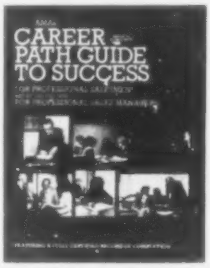
We major in practical know-how, not theory.

Your people get gutsy, hands-on training here, because *our* people all hold impressive track records in selling and management themselves. So attendees hear directly from the person who tripled sales in worn-out territories. Or from the sales manager who inspires an entire sales force time and again.

Repeat business is our highest praise.

Year after year, satisfied customers like Ingersoll Rand, AMP, Rapidata, Royal Viking, Merrill Lynch, American Cyanamid, Jones & Laughlin, Lever Brothers, and DuPont keep sending us their most promising people. We train over 3,500 sales people and executives annually. And overwhelmingly, the majority rate our programs "excellent."

Finally, because we offer **Career Paths** for both salespeople and sales managers, you have a way to build the goal-oriented team spirit so essential to any successful sales operation.



For the money, there's no better training program than AMA's **Career Path Guide to Success.** Find out for yourself how we can help you make sure every dollar invested in your sales team returns a tenfold yield!

"F-O-R-T-U-N-E Personnel not only introduced me to my employer, they also introduced me to my new employees."
Donald S. Blackford

"I thought changing jobs was going to be a long process. But when I contacted a counselor at F-O-R-T-U-N-E Personnel, they found me exactly the sort of executive engineering position I'd been looking for."

"Later, when I needed people for my own staff, F-O-R-T-U-N-E, once again, sent the right people for the job. I wasn't surprised. They had sent the right person for my job!"

F-O-R-T-U-N-E, a comprehensive nationwide personnel consulting service, can go to work for you. As specialists, our 40 plus offices will tap the employment marketplace with recruitment power that spans the entire corporate structure: Accounting & Finance; Sales/Sales Management; Marketing Management/Services; EDP/MIS; Manufacturing, Materials, Engineering Management; Personnel & Industrial Relations Management.

For the F-O-R-T-U-N-E office in your area, consult your local phone directories.

DEFINITIONS—**Lodging:** Single-room rates, excluding local taxes, are shown. Double-room rates are approximately 1.27 times greater. **Meal costs:** A 12.5% tip is included in each meal cost shown. In some cities, medians have slightly declined. This may be due to changes in the sample rather than changes in cost of meals. **B**—Menu prices for a breakfast consisting of two eggs, bacon or sausage, and coffee (and juice if it is part of the meal). **L**—Menu price for a lunch consisting of ground sirloin steak (not a sandwich) or a comparable entrée, potato, vegetable, and coffee (and salad, roll and butter, and coleslaw if part of the meal). **D**—Menu price for dinner consisting of 12-oz. sirloin steak, baked potato, salad, and beverage (and appetizer, soup, and dessert if part of the meal). **Per diem total:** Total one-day cost of lodging and meals. **Per diem increase:** Percent change from 1978 to 1979 in total one-day cost of lodging and three meals. **Per diem index:** A city's per diem total expressed as a ratio of the all-U.S. average (an index of 110, for example, means that the area's total cost is 10% above the national average). **Cost of two drinks:** Price for two martinis made from the bar's house liquor. **Airport to downtown:** Taxi fares shown include a 12.5% tip, but exclude the cost of extraordinary waiting time due to traffic delays. Information is for first city in metro area title. **Auto rental:** Costs are based upon the published nondiscountable daily rate of major companies. Applicable local gas charges for 50 miles have been added.

Note: **Average** is the sum of the dollar amounts divided by the number of responses. **Median** is the dollar amount that has an equal number of responses above and below it.

Why ACB's "MINTSYSTEM" newspaper advertising research should be part of your marketing research.

Our Newspaper Research Division is the only source receiving multiple copies of every daily and Sunday newspaper to provide clients *any and all information obtainable from national and retail display advertising.* Information which can be invaluable to you in planning the vital newspaper segment of your marketing plan. This all-inclusive research has a unique name: MINTSYSTEM—Marketing Intelligence Tracking System. What can it do for you?

ACB's MINTSYSTEM Reporting can tell you any brand's up-to-date share of the newspaper advertising market—and its retail newspaper support on both a current and cumulative basis.

Thus ACB helps you allocate funds in proportion to competitive activity; track variations in competitor's marketing strategies; tells you about new items, sizes, deals; keeps tabs on private label newspaper activity; automatically reports new products as they appear market by market. And much, much more.

Whatever you need to know to make your newspaper advertising a more profitable "marketer," ACB MINTSYSTEM Reporting can find it. Just contact your nearest ACB office or write for catalog 100 A.

TABLE III-2

Total selling expenses as a percentage of sales in major industries

Industry	**1979**	*1978*
Consumer goods		
Apparel	**11.2%**	9.4%
Durable goods	**5.1**	5.3
Ethical pharmaceuticals, surgical supplies & equipment	**13.5**	10.5
Food	**5.4**	5.2
Major household items	**2.8**	4.9
Proprietary drugs and toiletries	**16.1**	16.0
Industrial goods		
Aerospace products	**N.A.**	4.1
Automotive parts & accessories	**4.0**	4.1
Building materials	**2.8**	2.3
Chemicals	**4.2**	4.4
Computers	**19.4**	9.5
Containers & packaging materials	**2.7**	2.6
Electrical materials	**5.6%**	4.8%
Electronics	**4.4**	5.7
Fabrics	**4.0**	1.1
Fabricated metals (heavy)	**3.4**	2.7
Fabricated metals (light)	**4.0**	4.2
Instruments	**7.3**	5.5
Iron & steel	**1.4**	1.2
Machinery (heavy)	**4.3**	3.8
Machinery (light)	**5.5**	6.8
Office supplies & equipment	**10.0**	15.2
Paper	**2.1**	1.7
Petroleum	**N.A.**	6.3
Printing & publishing	**10.4**	9.5
Rubber, plastics & leather	**1.7**	2.9
Tools & hardware	**5.6**	9.1

Note: **Selling expenses** cover cost of median compensation of salespeople and sales management, travel, lodging, meals and entertainment, advertising, and promotion. One of the major difficulties encountered in gathering such information is that wide differences exist between companies in the definition of selling expenses and the costs included in such figures. In addition, some of the differences between years reflect changes in the organizations that reported data. Because of insufficient data, the following industries are not included in this year's listing: automobile & truck, glass & allied products, and petroleum.
N.A.—Not available, sample too small.
Source: American Management Assns., *Executive Compensation Service*.

TABLE III-3

Salespeople's annual compensation

Salesperson Level	Consumer Products 1979	Consumer Products 1978	Consumer Products % Change	Industrial Products 1979	Industrial Products 1978	Industrial Products % Change
Sales trainee						
Straight salary	**$12,900**	$10,925	+18.1%	**$13,650**	$12,950	+ 5.4%
Salary plus incentive						
Salary	**12,167**	12,450	− 2.3	**12,440**	14,000	− 11.1
Incentive	**1,200**	1,300	− 7.7	**3,780**	1,867	+102.5
Total	**13,200**	14,300	− 7.7	**15,700**	15,400	+ 1.9
A&B salespeople						
Straight salary	**15,300**	15,400	− 0.6	**19,925**	18,781	+ 6.1
Salary plus incentive						
Salary	**16,117**	14,950	+ 7.8	**17,474**	16,389	+ 6.6
Incentive	**3,383**	3,583	− 5.6	**5,148**	3,810	+ 35.1
Total	**19,767**	19,233	+ 2.8	**23,079**	20,700	+ 11.5
Senior salespeople						
Straight salary	**26,750**	18,900	+41.5	**25,536**	23,827	+ 7.2
Salary plus incentive						
Salary	**19,950**	19,217	+ 3.8	**21,871**	20,710	+ 5.6
Incentive	**4,383**	5,617	−22.0	**5,347**	5,079	+ 5.3
Total	**24,950**	26,433	− 5.6	**26,112**	26,284	− 0.7
Sales supervisor						
Straight salary	**29,900**	23,775	+25.8	**28,979**	28,193	+ 2.8
Salary plus incentive						
Salary	**27,450**	23,140	18.6	**25,316**	24,065	+ 5.2
Incentive	**4,533**	4,825	− 6.1	**7,426**	6,506	+ 14.1
Total	**32,217**	29,180	+10.4	**32,953**	31,823	+ 3.6

Note: Some differences between years reflect changes in the organizations that reported data. It should also be noted that in the "salary plus incentive" category, the "total" compensation will not equal the sum of the "salary" and "incentive" components because not all respondents provided information for each of the components, as is the case with industrial-products senior salespeople. The AMA attributes the apparent decrease in compensation of consumer-goods sales trainees paid on a salary-plus-incentive basis to an increased number of respondents and corresponding changes in industry categories. The 102.5% increase in industrial-goods sales trainee incentive payments is attributed to the increased number of industries in 1979 that were not included in 1978 because of insufficient data.

Definitions

Field sales personnel

Sales trainee: Anyone who is learning about the company's products, services, and policies, as well as proven sales techniques, in preparation for a sales assignment.

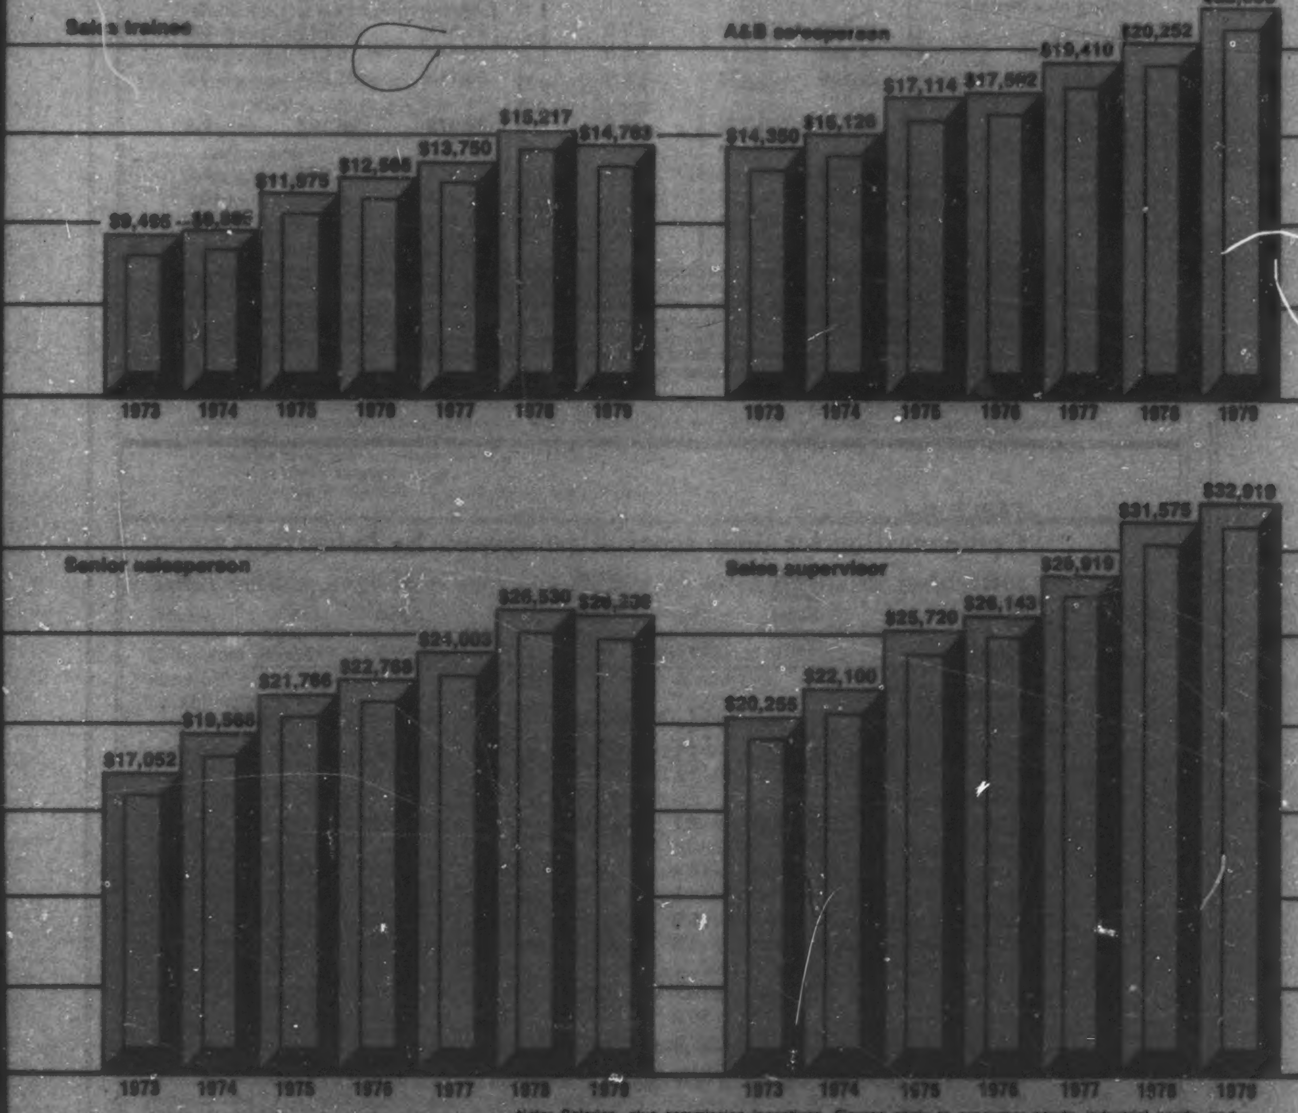
Salesperson Grade A: A "regular" salesperson who has little or no selling experience except that which has been acquired in the company's sales training program. He contacts established and prospective customers to develop interest in the company's products and to sell them.

Salesperson Grade B: A salesperson who has broad knowledge of the company's products and services and sells in a specifically assigned territory. He maintains contact with established customers and develops new prospects.

Senior salesperson: A salesperson at the highest level of selling responsibility. He is completely familiar with the company's products, services, and policies; he usually has years of experience and is assigned to major accounts and territories.

TABLE III-5

How salespeople's total compensation is growing



Note: Salaries, plus commission incentives. Figures apply to consumer goods, industrial goods, and "other," that is, insurance, services, transportation and utilities. Also, while the entire range of salaries increased over 1978, AMA says the decrease in trainee average is because of an increased sample and change in respondent base. In addition, decreased incentives contributed to the lower overall average salary for senior salespeople.

Source: American Management Assns., *Executive Compensation Service.*

Sales supervisor: A veteran salesperson who, because of his abilities and experience, leads others. Although his primary function is to direct the activities of and train salespeople and sales trainees, he may also sell to selected key accounts.

Sales-support personnel

Level I: This individual performs assigned tasks, using established procedures that require little evaluation. Generally reports to a supervisor.

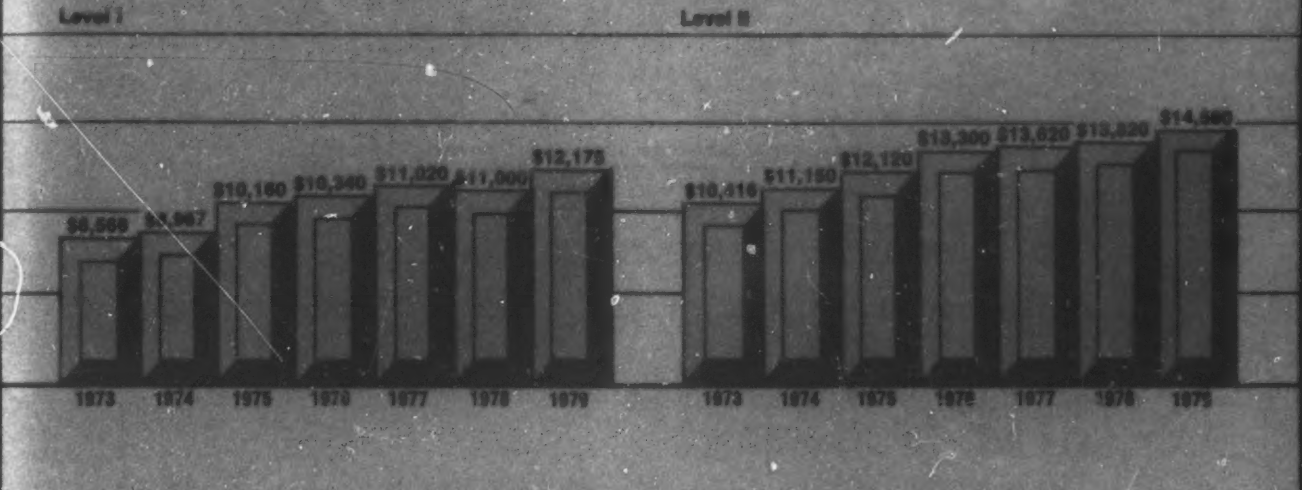
Level II: An intermediate-level worker who performs tasks involving limited responsibilities and standard procedures. Some originality and evaluation is required.

Level III: The highest nonsupervisory worker, expected to exercise considerable originality and make evaluations. On occasion, this person assists in training and supervising trainees and Level I employees.

Supervisor: This individual's primary job is to direct others in the accomplishment of assigned work. He also consults with superiors on more complex phases of assigned work.

TABLE III-6

How compensation for sales-support personnel is growing



Note: Includes sales analysts, customer service representatives, sales correspondents, sales training representatives, exhibit and display coordinators. One category (sales estimators) from previous years does not appear in the 1975, 1976, 1977, 1978, or 1979 data.
Source: American Management Assns., *Executive Compensation Service.*

TABLE III-7

Manufacturers' representatives' commissions

Industry	Average Of Single-Percent Commissions 1979	Average Of Single-Percent Commissions 1978	1979 Range Of Sliding-Scale Commissions Low	1979 Range Of Sliding-Scale Commissions High
Consumer goods				
Durables	**6.0%**	6.0%	6.9%	8.3%
Ethical pharmaceuticals, surgical supplies & equipment	**5.5**	10.0	N.A.	N.A.
Food	**6.7**	5.3	4.0	5.0
Major household items	**7.0**	3.0	2.5	16.0
Proprietary drugs & toiletries	**6.0**	7.0	N.A.	N.A.
Industrial goods				
Automotive parts & accessories	**4.3**	9.5	N.A.	N.A.
Chemicals	**11.3**	8.3	5.5	15.0
Containers & packaging materials	**N.A.**	**7.3**	**2.0**	**5.0**
Electrical materials	**6.4**	5.8	4.3	12.9
Electronics	**15.3**	10.5	2.5	6.0
Fabricated metals (heavy)	**5.6**	6.6	N.A.	N.A.
Fabricated metals (light)	**11.0**	7.0	7.3	19.9
Fabrics	**6.5**	12.5	2.6	4.2
Instruments	**8.5**	10.0	4.0	20.0
Machinery (heavy)	**6.9**	8.6	2.1	6.5
Machinery (light)	**11.4**	13.4	7.1	14.0
Printing & publishing	**7.0**	14.1	7.8	13.8
Rubber, plastics & leather	**4.5**	4.9	5.0	10.8

Note: Two types of commission arrangements are shown here. "Single-percent commissions" pertains to reps who are paid a fixed single percent regardless of the product type or sales volume they sell; "sliding-scale commissions" refers to plans where reps are compensated on a sliding scale according to product type and sales volume. Also, some of the differences between years reflect changes in the organizations reporting data.

**Audit Bureau of Circulations, March 31, 1979*

WHY INCENTIVE SAMPLING PROGRAMS COULD NEVER HAVE WORKED BEFORE.

The best way to get someone excited about an incentive is to give them a taste of it.

But until now, that's been nearly impossible.

Because a piece of a watch doesn't work. Part of a calculator just sits there. And half a TV is just a radio.

All of which leads you to a conclusion that's really a unique opportunity.

It's called a Pfaelzer Teaser.

It's a specially-designed package containing two prime quality 5 oz. Pfaelzer Filet Mignon.

Like all Pfaelzer meats, these Filets are hand cut, rather than sliced by machine; then specially pre-frozen and hand packed in dry ice to insure that your incentive recipients receive the quality that motivates them to do more.

And this Teaser is only one of a long list of Pfaelzer Incentive Program materials that includes everything from single-fold brochures with imprinting space, to four-color postcards, claim coupons and checklists on how to put your next incentive together without forgetting a thing.

For more information on Pfaelzer Teasers, and other Pfaelzer Incentive Program materials, call (312) 927-7100 collect, or write on your business letterhead to Pfaelzer Brothers, 4501 W. District Blvd., Chicago, Illinois 60632.

There are 982 more reasons to select the MGM Grand·Reno for your next convention

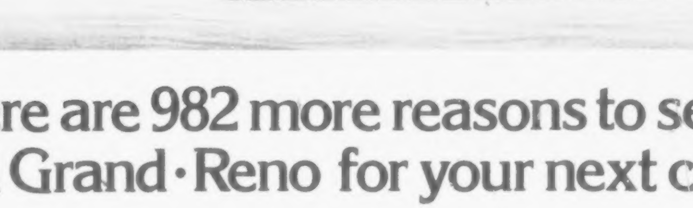
By May, 1981 the MGM Grand•Reno will open a new wing with 982 additional sumptuous rooms and suites, bringing the total available to 1,997. What a start for your next convention!

And our convention facilities are among the finest anywhere. We have 24 meeting rooms totaling 133,000 square feet of space. You can hold a reception for 5,200, order a feast for 3,600 or schedule a trade show with over 250 exhibit booths.

But superb guest and meeting accommodations are just two of the things that will make your meeting at the MGM Grand•Reno a smashing success. There's entertainment and recreation. Donn Arden's multi-million dollar musical, "Hello Hollywood, Hello!" is performed nightly on the world's largest stage, and this will give your convention an added dimension you won't find anywhere else. There are three entertainment lounges for music and comedy. Two movie theatres. A 50-lane bowling center and indoor and outdoor tennis courts. Men's and women's health spas. Seven fine restaurants. Forty shops and boutiques. The world's largest casino and a 2,100 seat Jai Alai Fronton.

MGM is but minutes away from Cannon International Airport. Ten airlines serve Reno and phase I of a new $21,000,000 terminal will open this fall.

Nearby the MGM Grand•Reno is picturesque Lake Tahoe for water sports and skiing. There's sightseeing galore at Virginia City, Carson City and the Ponderosa Ranch of "Bonanza" fame.



Write or call for our 4-color brochure on convention facilities and services. MGM Grand Hotel•Reno, Sales Department, 2500 East Second Street, Reno, Nevada 89595. (702) 789-2031.

L	8.15	35	70	8.15	571
D	14.85	38	38	14.85	564
7. Coffee breaks	2.25	35	105	2.25	236
8. Cocktail party	9.15	38	38	9.15	348
9. Meeting room					—
10. Hospitality-suite rental					—
12. Subtotal (hotel costs)					$4,756
Supplementary costs					
13. Audiovisual rental					—
14. Meals away from hotel					$ 289
15. Transportation from airport to meeting site					$ 165
16. Automobile rental					—
17. Transportation to and from meeting					$2,500
18. Entertainment, printed materials, handouts, etc.					$ 450
19. Subtotal (supplementary costs)					$3,404
20. Grand total					$8,160
21. Number of participants					35
22. Average cost per participant					$233.14

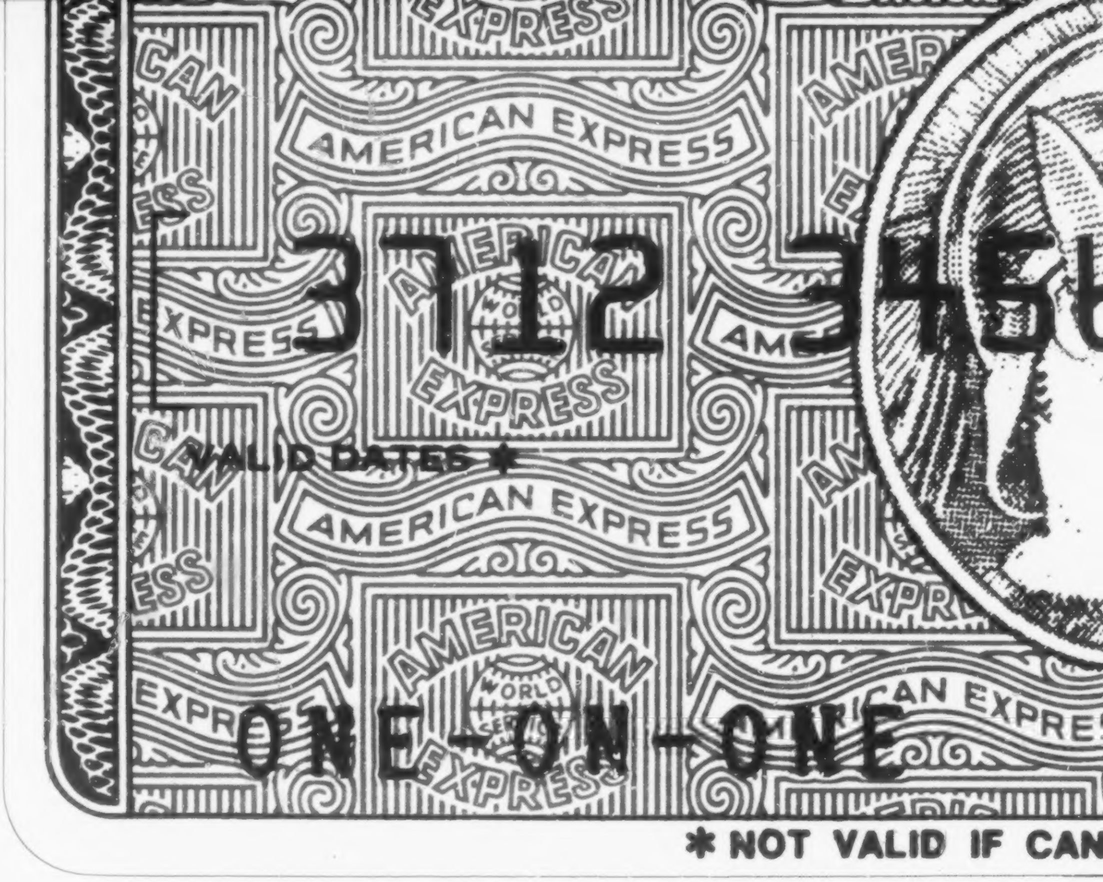
Using information from S&MM's *Survey of Selling Costs*, the marketer can get a more reliable fix on the costs of a particular meeting as well as compare meeting costs of various city locations. In the hypothetical example used here, a two-day divisional meeting is planned for San Diego. Of the 35 people who will attend, 25 will arrive from out of town the evening before the meeting starts.

Hotel costs

1. According to Table IV-4: Sales Meeting Costs (page 73), median group lodging rates range from $38 to $51 for a single room. For budgetary purposes, the sales manager plans to use a hotel that charges no more than $40 daily (Column 1, Line 5).
2. He enters the number of meeting participants, 35, who will attend each function in items 5 through 8.
3. The 25 people arriving the night before will need lodging for two nights, the other 10 only one night, so the number of times the lodging cost is incurred comes to 60 (Column 3, Line 5).
4. Table II-3: Meal and Lodging Tax Rates (page 55) indicates that San Diego has an 8% room tax, which brings the cost per person to $43.20.
5. Multiplying this figure by the figure in column 3 results in a total lodging cost of $2,592 (Column 11, Line 5).
6. Referring again to Table IV-4, he enters the cost of group meals in Column 1, Line 6: Breakfast, $6.35; Lunch, $8.15, and Dinner, $14.85. The two-day meeting will require two breakfasts and two lunches so the number of times those individual costs are incurred comes to 70. Multiplying that figure by each meal cost results in a total breakfast cost of $445 and a total lunch cost of $571. A reception and dinner will be held in the hotel at the end of the first day, and 3 people from top management will attend as guest speakers, bringing the number of attendees to 38. Multiplying that number by the meal cost results in a total dinner cost of $564.
7. The meeting will end early the afternoon of the second day so only three coffee breaks are planned (Column 3, Line 7).
8. Although the median rate for a 2-hour reception is $18.30 (as indicated in Table IV-4), the sales manager plans only a 1-hr. function and cuts the cost in half to $9.15 (Column 3, Line 8).
9. Because he has reserved sleeping rooms and will have sizable meal functions, the sales manager knows that the hotel will waive meeting room charges.
10. The same applies to hospitality suite rental.
11. The total cost for each function is derived by multiplying the cost of each function by the number of times the cost will be incurred (Column 11).
12. Adding the functional costs in Column 11 results in a total hotel cost of $4,756.

Supplementary costs.

13. The sales manager has no audiovisual rental cost because he does not need anything other than the overhead projector and screen normally furnished by hotels (Line 13).
14. Dinner costs will have to be allowed for the 25 attendees arriving on the night before the meeting. Table II-1: Metro Sales Costs (page 52) shows that a dinner in San Diego costs about $11.55. Multiplying this figure by 25 results in a $289 cost for meals away from hotel (Line 14).
15. The taxi fare from airport to downtown, also found in Table II-1, indicates that the total cost for this item will come to $165 (Line 15).
16. The attendees will spend all their time at the meeting, hence there will be no need for auto rentals (Line 16).
17. The traffic department tells the sales manager that air coach fares for flying the 25 out-of-towners to San Diego will aggregate $2,500 (Line 17).
18. The cost for transparencies, printed workshop materials, and the like is budgeted at $450 (Line 18).
19. Adding up the various supplementary items results in a subtotal of $3,404 (Line 19).
20. Combining hotel and supplementary costs provides a grand total of $8,160 (Line 20).
21. The number of participants is 35.
22. Dividing grand total costs by 35 results in an average cost per participant of $233.14 (Line 22). If this same procedure is followed for calculating the per-participant cost of other candidate cities, the sales manager will learn which location is a more economical choice.



Book a year's worth of impor

ONE ON ONE™

Your direct dialogue with resort hotel management.

Be the guest of American Express at any one of four unique Meeting Planning Conferences this year.

Here's the way it works: We bring seventy or more top resort hotel managers to each of four locations during the year — Los Angeles, New York, Atlanta, and Houston — for a full day's meeting planner-hotel manager get-together.

The atmosphere is relaxed. And informal. We provide cocktails, a fine luncheon, and an internationally-known guest speaker . . . all on our tab. At no cost to you. We also give you a chance to win an all-expense-paid trip for two,to a really exotic location, and/or a paid vacation for two at any of the seventy plus resort hotels.

ONE ON ONE in
LOS ANGELES
Wednesday, May 21, 1980
Los Angeles
Bonaventure Hotel

You can count on actually booking your upcoming meetings at these Conferences . . . because the resort hotel people are heavyweights. You'll be able to huddle with them one-on-one and get on-the-spot commitments and authoritative answers as you plan your meetings. And this kind of direct communication will save you endless hours of phoning and corresponding with "I don't know I'll have to find out" types.

DEFINITIONS—**Lodging:** Rates are shown for two types of accommodations, economy (low) and premium (high). The median rate is the figure that has an equal number of responses above and below it. Preferred rates are often available if the group guarantees a specific number of rooms. **Food and beverage:** Tax and tips included in median costs. **B**—Breakfast typically includes fruit or juice, entrée, rolls/toast/sweet rolls, and beverage. **L** and **D**—Lunch or dinner typically includes appetizer, salad, entrée, two vegetables or potato and a vegetable, roll, butter, dessert, and beverage. Buffet meals, cold plates, and sandwich menus are often available at approximately the same costs at noon. **Hospitality functions:** Groups are not always charged for a hospitality suite if the hotel provides liquor and hors d'oeuvres. **Meeting rooms:** There is generally no meeting room charge if a specific number of sleeping rooms are required or if a group meal is included with the meeting.

EASTERN'S EXPANDED ROUTE SYSTEM CAN TAKE YOU TO MORE MEETING SITES.

When the search is on for the perfect meeting place, you can save yourself some headaches by contacting Eastern. We've got more choice spots than you can shake a gavel at.

We recently increased our service to the resort cities and convention capitals that are famous for successful meetings. And we go the distance to make sure your meeting comes off first rate. From San Juan to Seattle. Montreal to Mexico City. And all the Eastern cities in between.

FROM THE SUNNY SHORES OF FLORIDA, TO THE ISLANDS IN THE CARIBBEAN.

You say you'd like to gather your troops in Florida? Or hop down to San Juan, Barbados, or some other island in the stream? Fine. We can start plotting and planning for you. In over 100 cities, 14 countries, and the world's only Magic Kingdom... Walt Disney World in Florida.

EASTERN HELPS YOU GET YOUR MEETING OFF THE GROUND.

Eastern does more than fly your people from coast to coast, hinterland to island. We make all travel arrangements. Make sure you get the best fare. Line up rental cars or ground transportation.

With Eastern, a group travel planner will meet you beforehand to discuss site selections. Offer ideas on promotions. Map out itineraries. Then we'll profile your particular needs and give you a toll free number so all your members can stay posted.

So this time around put the aggravation of planning a meeting to rest. With Eastern your meeting or convention comes made to order.

For more information, call your local Eastern Sales Office, or mail the coupon below.

DEFINITIONS—**Lodging:** Rates are shown for two types of accommodations, economy (low) and premium (high). The median rate is the figure that has an equal number of responses above and below it. Preferred rates are often available if the group guarantees a specific number of rooms. **Food and beverage:** Tax and tips included in median costs. **B**—Breakfast typically includes fruit or juice, entrée, rolls/toast/sweet rolls, and beverage. **L** and **D**—Lunch or dinner typically includes appetizer, salad, entrée, two vegetables or potato and a vegetable, roll, butter, dessert, and beverage. Buffet meals, cold plates, and sandwich menus are often available at approximately the same costs at noon. **Hospitality functions:** Groups are not always charged for a hospitality suite if the hotel provides liquor and hors d'oeuvres. **Meeting rooms:** There is generally no meeting room charge if a specific number of sleeping rooms are required or if a group meal is included with the meeting.

LONG DISTANCE FOR LESS.

Now, to over 100 metropolitan areas nationwide, ITT's going to give you phone service —at savings up to 86%.

Whether you're a big or small long distance customer, there's no reason why your phone bills should be so big.

Because ITT is going to save you money on your long distance calls. Any way you choose to place them.

By City-Call, for example. You can phone from any pushbutton phone in much of the U.S., and trim an average of 15 to 40% off your long distance costs.

Or if you're big enough for a WATS line, you may be big enough for SPNS (our Switched Private Network Service) or our private line network. They do what WATS does but at far less cost.

Interested? Get all the information by mailing our coupon.

Or call 800-221-7267 toll free.

Talk to JAL. We'll show you how to make your incentive dollar travel further.

We'll show you how to make your incentive dollar go all the way to the extraordinary Orient.

We'll show you how to make JAL's Orient part of your incentive program and at a price that is competitive to ordinary travel destinations.

Imagine how hard your people will work to be winners in an incentive contest where JAL's Orient is the prize.

Imagine JAL's Orient—attentive, kimono-clad cabin attendants, fabled destinations such as the serene beauty of Japan and exciting Hong Kong.

Imagine sales where the sky's the limit.

Talk to JAL. Call Ed Conroy, JAL's Incentive and Convention Sales Manager at (212) 758-8850 or write him at Japan Air Lines, 655 Fifth Avenue, New York, N.Y. 10022.

We never forget how important you are.

Product Managers aren't born! They're developed.

A Cresheim study indicates that the product manager and the team (sales, marketing, manufacturing, research, and finance) need an agreed method for (1) developing a good product plan; (2) developing support for the plan; and (3) operating as a team. Our highly regarded *Effective Product Management* workshop was the response to this need.

Most workshops are run in-house for groups of 12 to 16 in the U.S. and abroad. A few mixed-company sessions are scheduled:

February 11-13, 1980—St. Louis
June 18-20, 1980—Chicago
November 5-7, 1980—Maui, Hawaii

Contact Jim Barrett for more details and a complimentary copy of our study "Why Product Managers Fail."

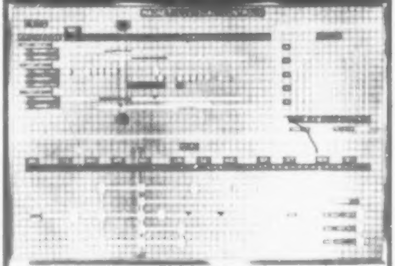
Minuteman Magnetic Scheduling Boards



The most modern and flexible board available today.

Here's an "efficiency expert" that works 24 hours a day — never takes a coffee break. Spotlights instantly the progress of every operation—pinpoints up-coming trouble spots . . . alerts you to errors. Colorful magnetic indicators move with finger-tip ease to schedule sales, production, personnel, traffic or any operation that requires paper work. Ideal also for EDP equipment, PERT and flow charting. No cards, pegs or other nuisance devices to replace because magnets last indefinitely. Pays for itself in time and money it saves.
For free full color catalog, write to Dept. SM

OTHER MINUTEMAN PRODUCTS

Does your sales promotion really promote sales?

Sales Promotion should work hard to help generate sales. It should perform at the grass roots, at the customer level.

That is why The Maresca/Wolff Organization has developed the Grass Roots Marketing™ Strategy, a series of cost efficient, individualized, pre-programmed and proven sales promotion tactics. One program designed to build sales by building demand, turns consumer co-op funds into sales results. Another reaches top-level business and industrial buyers that your sales force can't—and covers small customers that your sales force shouldn't.

These and other Maresca/Wolff Programs are created so you can control the climate, the content and timing. Are they applicable to your needs? Could be. Fill out and mail the coupon below. We will tell you if we can bring your marketing/sales promotion efforts back to the grass roots.

BOSTON
200 Miles
NEW YORK
1 Mile
USA
1982

Today $20 worth of gas will get you from Washington, D.C. to Boston. In 1982 would you believe... New York City?*

Between ever accelerating costs and the fuel crunch, many fleet operators are losing their drive. In fact by 1982, your fleet's effectiveness could be cut to half speed as operating costs will have probably doubled.

So shift gears now and plan for the future with... The Associates Econo-Misers.

We have the answers when it comes to type of use, resale value, availability, trunk space, image, comfort, and most importantly, the latest fuel-efficient combinations. Pioneering a whole new dimension in fleet leasing, we've analyzed all the 1980 models, enabling us to combine the right fleet with the most cost-efficient leasing program for you.

We not only offer management help so you can tend to business instead of your fleet, we also help you deal with costly decisions today ensuring a mor profitable tomorrow.

We're The Associates... American Pioneer of Transportation Finance. Nobody knows transportation like we d It's been our business for over 60 year So, let The Associates Econo-Misers get more mileage out of your fleet toda tomorrow and in 1982!

*Based on the 1980 cost per gallon of gasoline of $1.00 and an EPA average of 20 miles per gallon vs. a projecte 1982 cost per gallon of $2.00 in the same car averaging 20 miles per gallon.

"I can give you four great reasons why thousands rely on Sales Consultants...

Five counting myself."

Danny Kirby,
National Sales Manager,
Aquarius Industries, Inc.,
Nashville, Tennessee.

"As manufacturers of molded acrylic tub and shower enclosures, we're in a tough competitive business. When we look for a salesperson, we look for a seasoned pro. And our company relies on the people at Sales Consultants to fill the bill. They haven't failed us yet.

"I turn to the people who run the largest sales and sales management recruiting firm in the country. Sales Consultants locate, interview and choose only prime candidates for my selection. They save me time and money in the long run. They have over 80 offices in major marketing centers, that means I select from the cream of the crop.

"When it comes to finding good salespeople, Sales Consultants will make you a believer. That's a fact. We employ four salespeople, all of whom are doing a great job. They were all hired through Sales Consultants. Incidentally, so was I."

SALES CONSULTANTS

Finding and placing sales and sales management talent is our only business.

Source: Robert Coen, senior vice president, McCann-Erickson, Inc.

The accompanying table is based on the third annual study of advertising and promotion expenditures of major U.S. corporations and industry sectors. It was performed by Schonfeld & Associates, a Chicago consulting company, and covers 2,230 major U.S. companies in 179 industry sectors. The raw data for the study are compiled from 10-K reports filed with the Securities and Exchange Commission by publicly owned companies.

Although data are compiled from published financial statements rather than surveys, cautious interpretation is required for several reasons. First, companies may vary in what they include under advertising and promotion expenditures. Second, many large companies are in several fields, yet are listed in only one industry sector. This may result in some distortion because a large-sized subsidiary will not be included in the sector in which it competes. Third, a few large companies are privately held, and their figures are not included.

Copies of the study are available for $225 from Schonfeld & Associates, 120 S. LaSalle St., Chicago, Ill. 60603.

To the unsung heroes behind every company meeting. Delta offers ConCom.

. . . So at least you won't do all the work. Organizing a big meeting takes a lot of work, even though the people who attend take it for granted.

Con Com makes it easy, with a nationwide toll-free line for: group travel arrangements and transportation cost analysis to any Delta city, tailored ticketing, car rentals, special attention for your group or VIPs by our airport professionals, helpful promotional materials (such as sending out agendas or schedules). Con Com will make reservations, send confirmation letters and mail a ticket to each person or work out the ticketing arrangement that suits you.

There's also a toll-free Ready Line for attendees to make their own travel arrangements with someone who'll be familiar with the meeting.

Use as much or little of our service as you need, for no extra charge.

For complete details, call your local Delta Marketing Office, or one of our ten Meeting Coordinators at 1-800-241-6108, or 1-800-282-8744 in Georgia.

Con Com, Delta's Convention and Company Meeting Department. We'd like to have your business!

con com

Delta is ready when you are®

How do you know if that service garage in Salina is making a monkey out of you?

All you see is the bill.

One of your fleet cars needed a water pump. Or a brake job. Or something else it seems like it just had a few months ago.

It's a big bill. Really big. But maybe that's the going rate in Salina. Or maybe you got taken. Who knows?

We know.

We've got an entire maintenance management group that does nothing but work on keeping our clients' fleet maintenance costs to a minimum.

It's staffed with mechanics and service department pros. They authorize every repair, approve every repair price on every one of our clients' vehicles. By phone.

The driver simply calls Gelco when he needs maintenance. We call up the complete maintenance history of the vehicle from the computer. If the same service was performed recently, we go back to the service facility for compensation or warranty reimbursement.

Meanwhile we negotiate the cost of the new repair. We've got clout with garages. After all, we control 150,000 vehicles that are potential customers of theirs.

Maintenance management is just one part of our complete fleet management program. A program designed to control—and in some cases even cut — the costs of parts, labor, insurance, tires and fuel.

Call or write us now for details. We won't let anyone drive you bananas.

We know.

A helpful subject-matter index to all statistical information appears on page 101.

Car allowances vary by region

One of the greatest problems in car allowances for salespeople who use their own cars on company business is the failure to recognize cost differences by sales territory. Many companies, says Runzheimer & Co., the Rochester, Wis., consulting firm that specializes in automobile-reimbursement programs, establish an arbitrary allowance paid to all sales personnel, regardless of where they live and drive. This can be unfair to the driver and unwise for the company.

The regional table accompanying this article shows the critical differences between the four major regions. Ownership-per-day costs, which include insurance, license, taxes, and depreciation, can vary by 22%; operating-per-mile costs, which include gasoline, oil, maintenance, and tires, by 9%.

Important differences can also exist between a city and its region. In the San Francisco area, Runzheimer notes, car ownership, at $6.70, and operating costs, at 9.75¢, are both significantly higher than the comparative western averages. Similarly, in Miami, where the ownership cost is $6.35 and operating cost 8.60¢, expenses exceed the regional averages. At 20,000 business miles and 240 business days annually, the difference in San Francisco can amount to $699; in Miami, to $716, Runzheimer says. Thus the regional data shown here should be used as guidelines, supplemented by the cost factors that make one sales area different from another.

TABLE VI-1

Automobile standard allowances: 1980

	Ownership Per Day	*Operating Per Mile*
Northeast	$ 5.39	7.40¢
Midwest	5.40	7.60
South	4.74	6.95
West	5.79	7.35
U.S.	**$ 5.33**	**7.33¢**

Note: Figures represent a 1980 intermediate-sized car equipped with a 6-cylinder engine, automatic transmission, power steering, power disc brakes, AM radio, air conditioning, and tinted glass. All costs based on an economic use cycle of three years and 60,000 miles. Ownership per day costs are based on a 365-day calendar year.

Source: Hertz Corp.

[1] Index is the ratio of the city's cost to the U.S. average; an index of 103 means the city's cost is 3% over the U.S. average.

Note: Examples of auto sizes: Ford Fairmont, compact; Granada, small mid-sized; and LTD II, intermediate. Costs are for a vehicle driven 10,000 miles a year for three years.

TABLE VI-3

Automobile fleet purchase costs

Model	Fleet Purchase Price Eight-Cylinder 1980	 1979	 % Increase 1979–80	 Six-Cylinder 1980	 1979	 % Increase 1979–80
American Motors Concord,[1] four-door sedan	—	—	—	$4,400	$3,655	N.A.
Chevrolet Caprice Classic, two-door sedan	$5,404	$4,853	11.4%	5,254	4,672	12.5%
Dodge Diplomat Medallion, four-door sedan	5,775	4,896	18.0	5,596	4,717	18.6
Ford LTD-S, four-door pillared	5,181[2]	4,625	12.0	5,058	—	—
Mercury Monarch, four-door pillared	4,571	4,074	12.2	4,417	3,839	15.1
Plymouth Volare, four-door sedan	4,421	3,750	17.9	4,242	3,571	18.8

Note: All prices include only the equipment that the manufacturer considers standard. Freight charges are not included. Fleet purchase prices will vary according to deals worked out by individual buyers and sellers. The basic prices listed above are commonly obtainable when five or more cars are purchased.

N.A.—Not available; substantial model changes make comparison invalid.

[1] Not available as an eight-cylinder model.

[2] LTD-S replaces LTD-II.

Off Campus Degree Programs

Extension Study Programs

Bachelors/Masters/Doctoral
California Western University is now offering work related degree study programs to the mid-career adult who feels his prior academic experience, occupational achievements & vocational training may have degree level equivalency.

All degree programs are self-paced, self instructional programs allowing the student to complete the degree requirements at his own pace, with no mandatory seminar or classroom attendance.

For a personal evaluation of your total background and how it could relate to the programs offered, send us a detailed resume, or call our admissions office...

California Western University
700 N. Main Street
Santa Ana, California 92701
phone: (714) 547-9625

Have regular medical check-ups.

Give Heart Fund
American Heart Association

You can reduce sales force turnover. You can hire only the best.

You can solve your sales force selection and turnover problems with our unique Sales Effectiveness Profile. You'll find out why your winners are better than the rest of your salespeople. You'll get go, no go selection criteria so you'll hire only the best from now on. And your current salespeople will learn what they need to do to become winners.

For complete information with no obligation, call or write today.

MARCH 17, 1980
A BILL PUBLICATION
TWO DOLLARS

Lehigh breaks away from the herd

In a Lehigh Valley Farms commercial, a family that enjoys the great outdoors quaffs "America's most refreshing new soft drink," low-fat Lite milk. Using a brand name and advertising on TV are just two ways the farm co-op is bringing milk marketing into the 1980s. The results include a doubling of sales in just four months. Story on page 29.

Inside Out

Selling to the Soviets. Except for products redlined by the U.S. government, it's business as usual for marketers with Russian clients. Page 10.

Sales promotions. Cracker Jack packs some new prizes that are so big they won't even fit in the box. Page 13.

Cents-off coupons. A judge is asked to decide this intriguing question: are coupons a case of predatory pricing? Page 15.

Computers. As lower-cost computers enter the market, IBM experiments with low-cost selling. Page 19.

Airline marketing. World Airways is back in the sky to lure price-conscious passengers away from the major carriers. Page 19.

Training. To ensure that its new cardiovascular drug goes over, E.R. Squibb & Sons staged its most ambitious sales training program yet. Page 33.

Salesmanship. You're never too old to sell, says Henry Flarsheim, who, at age 83, offers himself as a prime example. Page 41.

Making the sale. For many salespeople, dealing with the customer's objections is the most objectionable part of selling. But it needn't be. Page 102.

such as *California Business* and *Crain's Chicago Business*). Enter a new service to help researchers keep abreast of all that's being published of interest to them. It's called the Advertising and Marketing Intelligence Service (AMI), and it's a joint venture of the New York Times Information Service and J. Walter Thompson advertising agency.

Developed from a limited service provided to J. Walter Thompson by the Times' Information Service, AMI stores abstracts of articles and news items from 60 general and business publications (including S&MM) in a computer in Parsippany, N.J. Abstracts are added daily and appear on the user's own video and print terminals.

Wayne Fickinger, president of J. Walter Thompson, notes that the service is compatible with over 400 types of computer terminals. Access to AMI's computer via regular telephone lines costs $4,850 per year and includes 30 hours of on-line time. Each hour thereafter costs $95.

CENTS-OFF COUPONS

Grounds for a lawsuit?

In 1971 Procter & Gamble's Folger Coffee signalled its entry into the Cleveland and Pittsburgh markets with a salvo of cents-off coupons. The goal was to dislodge General Foods' Maxwell House brand, but the campaign hurt Breakfast Cheer, then owned by Indian Coffee Corp., Pittsburgh.

In 1974, Indian sold out to Wechsler Coffee Corp., Moonachie, N.J., but not before owner

S&MM BAROMETER

Shooting toward wage-price controls

January's consumer price index rise to an annual 18% rate heightened the prospect of wage and price controls. Michael Luckey, senior economist at Merrill Lynch Economics, New York City, thinks there is perhaps a 60% chance that controls will be enacted this year although "they won't work because they will not tackle the central problems behind the inflation."

Meanwhile, despite personal savings standing at a postwar low, the unexpected strength in the employment picture and the prevalent psychology of buying in anticipation of future price increases suggests a 10.7% rise in retail sales in the first quarter, and an 11.2% increase in the second. Because retailers' prices will be escalating faster, the gains will be illusory, however.

Further clouds on the horizon: Consumer incomes will be pinched by higher energy prices, social security taxes, and inflated tax brackets, says Carol Brock Kenney, consumer economist at Shearson Loeb Rhoades, New York City. She predicts that they will mean a $60 billion income "drag," or restraint, on spending.

S&MM sneaks a look at a new *Census of Manufactures* and finds that the number of U.S. plants jumped 12.2% in 1972–77. Not bad for a postindustrial society.

Up goes the factory

By THAYER C. TAYLOR
Senior Editor/Management Sciences

A surprising increase in the number of prospects for industrial marketers is heralded by the first trickle of reports from the 1977 *Census of Manufactures*. An analysis by S&MM of preliminary state reports reveals that the number of manufacturing establishments surged 12.2% to 360,275, in the 1972–77 period.

What's more, the number of plants probably continued to expand steadily through 1979. Next month, S&MM's annual *Survey of Industrial Purchasing Power (SIPP)* will report that the number of factories with 20 or more employees now stands at 140,236, a healthy 22% rise over the 1977 total.

The 12.2% growth is significant for three reasons:

- It dwarfs the 3.1% gain that occurred between the 1967 and 1972 censuses, not to mention the 0.3% decline in the 1963–67 period.
- It took place despite the 1974–75 recession, the worst economic relapse since 1929.
- Contrary to all the talk about the postindustrial society of today and the information society of tomorrow, the figures show that manufacturing still has considerable vigor.

The growth is good news for consumer marketers, too. Factory payrolls are the single biggest component of Effective Buying Income, so shifts in manufacturing activity influence a local market's buying power.

Regional trends highlighted by forthcoming Census Bureau reports will come as no surprise to users of S&MM's *SIPP*, which has documented the acceleration of industrial growth in the South and West.

The Rocky Mountain region, starting from a small base, set the pace in 1972–77 with a 32% increase in manufacturing plants. Next came the Southwest, up 28%, and Far West, 27%.

Although these growth rates may give marketers some idea of how to deploy their sales force in the future, they don't tell the whole story. For example, the Rocky Mountain's 32% advance translates into a numerical gain of only 2,172 factories. In contrast, the highly industrialized Great Lakes grew less than one-fourth as fast but added more than twice as many new plants, 4,651.

In the "war between the belts," the Sunbelt gained rapidly on the Snow Belt. The number of plants in the states that form the southern perimeter from North Carolina to California increased 23%, to 130,195, vs. a 3.4% gain, to 158,236, by the industrial area stretching from Massachusetts to Wisconsin. If these sharply divergent rates continue, the Sunbelt will take the lead in total plants by the mid-1980s.

All this is *not* simply the result of manufacturers forsaking the North for cheap southern labor, however. David L. Birch, a consultant with the Massachusetts Institute of Technology's program on neighborhood and regional change, says that "the physical migration of firms from one state to another is relatively insignificant, rarely exceeding 0.1% of the job base." More critical, he concludes, "is the birth of new plants and enterprises and the rate at which dying ones are replaced."

Industrial marketers who dig into the 1977 census data are sure to make the Southeast a focal point of long-range planning. As a result of its 16% growth, the region boasts more manufacturing prospects, 69,558 plants, than the highly

count

industrialized Great Lakes, 69,324, and is topped only by the Mideast, 76,270. Even more significant is the region's changed industrial mix. E. Evan Brunson, director of governmental affairs at the Southern Growth Policies Board, observes, "The region's traditional low-wage industries account for only 25% of manufacturing employment growth while the newer, higher-wage industries, such as nonelectrical machinery and chemicals, have about 42% of new jobs."

His contention is supported by data on value added by manufacturers, which is calculated by taking shipment figures and subtracting the cost of purchased materials. Although the Great Lakes is far ahead with a 27.4% share of U.S. total value added, the Southeast has drawn even with the Northeast at 19.3%. Equally important are the figures on value added per employee, which indicates how productively factories are used. Here the Southeast's rate of increase in 1972–77 was 62.4%, second only to a 75.9% gain in the Southwest, which is heavily oriented toward electronics.

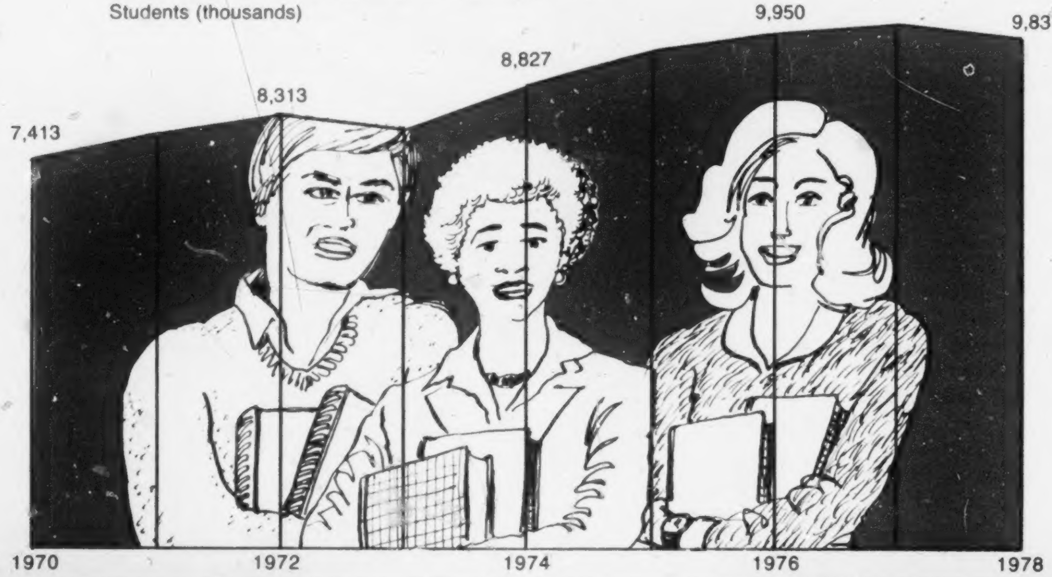
The changing face of the college crowd

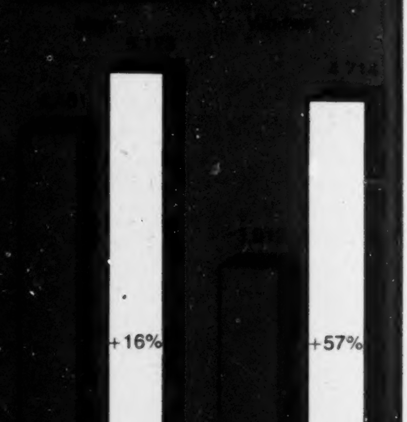
U.S. college campuses present a sharply different scene today than in the early 1970s. Because of the trend of delayed marriages and the emphasis on longer career preparation, the number of older students has increased. At the same time, the focus on women's rights has resulted in more female students. This is also true in graduate schools, which are of special interest to marketers.

Enrollment is up by one-third since 1970

Students (thousands)



Female students rose three times faster than males



At last, the campus shows some signs of growing up

% Increase, 1970–78

Industrial marketing: Dana's clutch hitters

What's the remedy when demand tapers off in your basic business? Dana Corp.'s answer is a special marketing team assigned to go after a spectrum of industrial markets. Heading the effort are Jack Neff, vice president, North American Marketing (top left), and general sales manager Len Newblom. Chart above shows how their sales engineers work with distributors to service accounts of all sizes. Page 31.

Inside Out

Media. Not even a lost RCA communications satellite will ground Ted Turner's newest cable TV venture. Page 10.

Merchandising. Authors' woes include (1) critics and (2) bookstores that can't meet demand. Waldenbooks has an answer to the second problem. Page 15.

New products. If you think that most fail, you're wrong. A just-published survey shows that two-thirds click. Page 20.

Ma Bell's big move. Even as the legislative mills grind on, AT&T's top management goes ahead with a plan to create a separate, unregulated subsidiary for data communications. Page 27.

Cooperative advertising. Retailers often complain that manufacturers' co-op plans should be standardized. Now a trade group is adopting the idea. Page 83.

A significant trend. Not since 1975 has Detroit produced a convertible, thereby creating a growth market for a cottage industry. Page 100.

only two R-22s a week, so marketing coordinator Karen Walling's biggest problem isn't new sales but pacifying some 80 eager dealers—most established sellers of fixed-wing aircraft. Thus Robinson is at work on what he needs most—a plant expansion that will let him deliver 10 helicopters a week, putting him a notch closer to competing with Cessna's and Piper's smaller fixed-wing aircraft.

CONSUMER RESEARCH

A pitch right from the heart?

They laughed when he set out to prove that a consumer's buying intentions could be gauged by the pitch of his or her voice, but after five years Glen A. Brickman and Vopan Marketing Research, Boston, are suddenly awash with respectability. After addressing the Advertising Research Foundation last month, Vopan founder-president Brickman and executive vice president Larry Ramsey are readying speeches for meetings of the American Marketing Assn. and the Advertising Club of New York in April.

Simply stated, the pitch theory is that the vocal cord is like a guitar string that becomes taut when a person expresses a conviction such as intent to buy a product. Brickman contends that measuring that particular note on the individual's unique voice "scale" yields more revealing results than the usual questionnaires.

A Vopan field interviewer warms up his subject with routine questions to establish the

S&MM BAROMETER

Roses and thorns for the industrials

Industrial-goods marketers are caught on the horns of a forecast dilemma. On the one hand, as a spokeswoman for Chase Econometrics notes, the Administration's third anti-inflation package in four years aims at forcing a recession to curb demand. On the other hand, as Data Resources senior economist Lee Philips observes, business spending is at a high level because of the need to modernize capital stock, ward off foreign competition, and comply with environmental regulations.

The leading econometric consultants polled by S&MM last month expect the downward pressures to win. They see year-to-year gains in business fixed investment ebbing—a 10.9% climb in the second quarter, 6.5% in the third, and 6.0% in the fourth. Still, the Commerce Dept.'s latest survey finds capital spending plans by businesses up 11% for 1980, and a Conference Board poll reveals that capital appropriations shot up an unusual 9% in last year's fourth quarter.

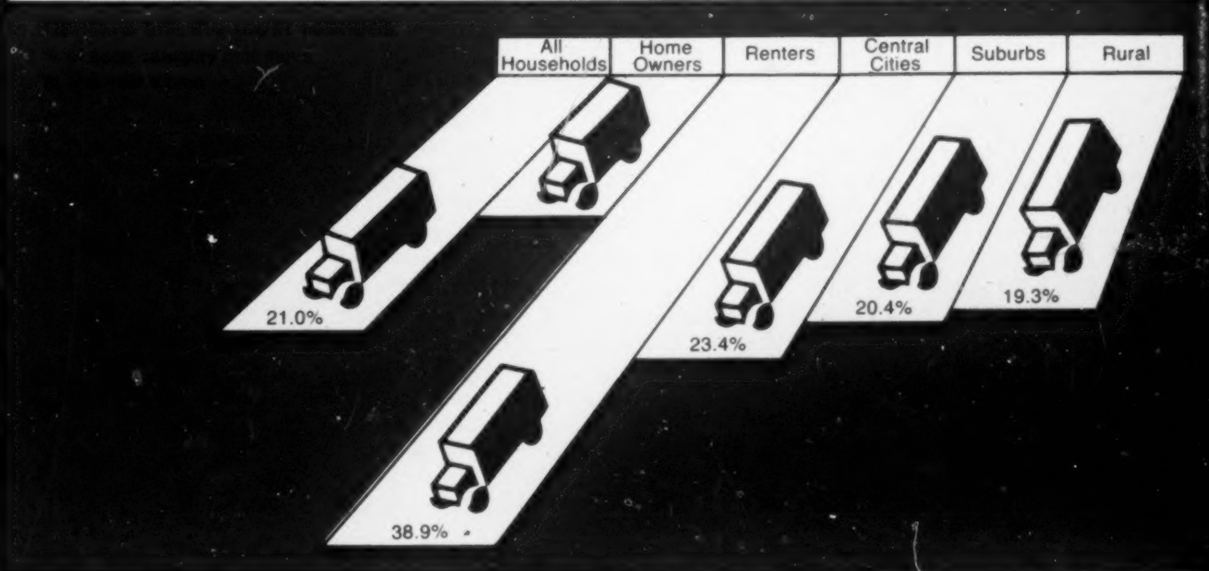
Mobile Americans: A moving target with sales potential

With one out of five households on the move each year, mobility presents numerous opportunities for marketers. In general, people who move are more upscale than their stay-put counterparts, boasting higher incomes and costlier homes. Why do they move? Over 38% want to satisfy housing needs, such as owning their own home or living in a better neighborhood. The next largest cause is a change in family status, such as marriage, divorce, or the arrival of more children. Although current uncertainties about energy may reduce the mobility rate, it's just as likely that they will encourage more people to move from the high-cost, energy-poor Northeast to Sunbelt and Rocky Mountain states.



People who move have more to spend . . .

Sales Incentives

Give a little, Get a lot

Nearly 7 in 10 sales executives use merchandise, travel, and cash incentives to stimulate sales. Incentives work so well, in fact, that an exclusive S&MM survey finds that this year over 40% of companies will run more programs than they did in 1979.

Sales Incentives
Give a little,
Get a lot

Merchandise, travel, and cash incentives are such effective motivators that sales and marketing executives are boosting their 1980 incentive budgets.

INCENTIVE GAME PLAN

By SALLY SCANLON
Senior Editor

With inflation running at a staggering 20% annual rate, sales executives aren't playing games with their marketing budgets this year. Nevertheless, 69% of them will offer their salespeople merchandise, travel, or cash incentives for doing jobs that, some observers grumble, they're paid to do anyway. Moreover, 60% of incentive users will increase their spending this year, and nearly half plan to run more programs than they did last year.

Those are some of the highlights of an exclusive S&MM survey of current sales incentive practices. The survey, mailed in January to 1,000 subscribers, explored such areas as 1980 incentive budgets and program plans, prizes offered, program evaluation methods, and what steps sales and marketing executives take to make their programs fair; it also asked managers about their sales force recognition programs.

The rationale for a well-designed incentive program is *not* to get the salesperson or field sales manager to do his normal, everyday best. It's to stimulate him to put out the extra effort required to achieve specific short-term sales goals, such as opening a certain number of new accounts or selling a more profitable product mix.

The majority of sales executives think incentives are highly effective. Here's a sampling of their comments:

- "Historically, in our case, sales and new accounts increase when an awards program is in force." (National sales manager, $10 million-or-less industrial company)
- "Incentives help us selectively promote profitable line items." (Sales manager, $26–$50 million consumer-goods company)
- "During a time of high inflation, incentive programs are well-received by sales." (Regional manager, $501 million-or-over consumer-goods company)
- "Incentives help our company achieve short-term goals." (Sales training specialist, $501 million-or-over industrial company)
- "We have very tough competition. Motivation for extra effort is a must, and incentives motivate." (Corporate vice president, $501 million-or-over industrial and consumer goods company)

Although the highest percentage of incentive users is found in nonindustrial companies and in companies with annual sales of $11 million or more, our survey confirms that incentives have broad use. An analysis of responses by line of business and by annual volume shows that 50% or more of all respondents in each of the business and volume categories use incentives (Table A, at right). Their goals include:

- Stimulating sales;
- Increasing motivation;
- Concentrating on specific products or lines;
- Signing new business;
- Increasing activity in new geographic areas;
- Promoting new lines;
- Increasing market penetration.

To achieve those goals, 61% plan to increase their incentive budgets this year (Table B, page 58). Now that's hardly surprising in a year plagued with double-digit inflation. But

1980: AN S&MM SURVEY

the survey shows that the increases will be spent to boost participation as well as to meet rising costs. Thus 41% plan to spend more and to run more programs than they did last year, while 21% will spend more but run the same number of programs.

Several executives in both groups plan to increase the value of the awards they offer. As the vice president of a $101–$500 million insurance company says, "We're running the same number of programs this year, but we're after more participants and winners. We're also giving awards of greater value." The sales vice president of a small services company adds, "We're looking for a 20% increase in sales, and we feel we should up the ante in prizes."

There are dissenters, of course. Seven percent of users plan to decrease their 1980 incentive spending. About the same percentage will run fewer programs this year (Table B, page 58). Reasons for the decreases vary. Some respondents have had their budgets cut; others say that this year's marketing mix requires fewer programs because, for example,

"we aren't introducing any new products this year," or "production can't keep pace with demand."

A few are simply disillusioned. "Special incentives have outlived their usefulness," says the marketing director of a $101–$500 million industrial company, who is halving his budget. The district manager of a $101–$500 million consumer-goods company adds, "There's been a lack of support for prizes by winners in the past."

Not all are cutting back by choice. The marketing manager of a $26–$50 million distribution company says, "Our incentives are based on cooperative programs with our suppliers. There's been a decrease in the number offered."

The survey turned up surprisingly few negative comments about the effectiveness of incentive programs, though,

even among nonusers. Only 13% of those who aren't running incentive programs this year (or about half of those who say they've used incentives within the past three years) say that such programs "didn't accomplish our objectives" (Table C, page 58). The chief reason they give for not using merchandise, travel, or cash incentives is that such programs are "against company policy."

Says one, "Our policy is to put the money into high commission dollars." Another complains, "Top management is afraid to spend a little more to get a little more in sales." But at least one worries that incentives might be too effective. "We don't want our salesmen pushing customers," he asserts.

Other reasons for not using incentives include short-lived results, "no need," problems with administering them fairly or with evaluating results, a biennial program schedule, and (from a marketing vice president) "Our sales manager doesn't like them."

Indeed, personal preference appears to play a large role in incentive-program decision-making. For example, past personal experience probably influences whether a company uses sales incentives. The survey found that 74% of current incentive users participated in sales incentive programs when they were salespeople; 94% of them enjoyed participating. In

S&MM
Sales & Marketing Management
now has an expanded Worth Writing For card in the back of this issue, which makes it possible for readers to obtain information from advertisers quickly—merely by circling the appropriate numbers on the card.

Sales Incentives Give a little, Get a lot

contrast, only 42% of nonusers ever participated in a program themselves, with only 78% of them enjoying such programs.

Personal preferences are even more apparent when it comes to the selection of awards. The loyal followers of merchandise, of travel, and of cash are convinced that their personal preference is by far "the best" award for all incentive programs. A strong minority (45%), however, now offers its salespeople a mix of prizes (though not necessarily in the same program). Ten percent use all three motivators: merchandise, travel, and cash. Thirteen percent offer merchandise and travel. Fourteen percent use merchandise and cash, and eight percent use travel and cash.

Incentives users' tips for shaping a fair program

1. **Set individual quotas.**
2. **Establish different quotas for different lines.**
3. **Base programs on two or more factors, not just on dollars or on units.**
4. **Analyze your markets and your sales programs before you set your sales-incentive goals and quotas.**
5. **Base goals on previous actual performance.**
6. **Set realistic goals.**
7. **Have measurable objectives.**
8. **Strive for maximum participation.**
9. **Make rules that are easy to understand.**
10. **Spell out requirements carefully before the program begins.**
11. **Report standings to participants on a regular basis.**
12. **Give field sales managers the flexibility to adjust for unusual circumstances.**
13. **Don't use lottery-type programs.**
14. **Always have more than one winner.**
15. **Evaluate your results, including salespeoples' and field sales managers' opinions of the program.**

Where the dollars go

Incentive spending continues to climb* . . .

	*1980***	*1979*	*1978*	*1977*	*1976*
Merchandise (Mil.)	$1,571.6	$1,384.7	$1,213.6	$1,033.9	$899.0
Travel (Mil.)	419.8	386.9	361.3	291.4	254.7
Total (Mil.)	1,991.4	1,771.6	1,574.9	1,325.3	1,153.7

. . . and so does the cost of awards.

Average unit cost of merchandise and travel awards

	1980	1979	1978	1977	1976
Merchandise	NA	$ 277	$237	$ 150	$196
Travel	NA	1,208	931	1,071	896

*Excludes program promotion costs and the cost of cash and recognition awards.
**Estimate. NA–Not available.
Source: *Incentive Marketing*, January 1980; *Incentive Marketing Facts*, December, 1979, 1978, 1977.

The relatively low percentage of travel-and-cash users probably reflects two things: (1) travel programs, because of their higher average cost, tend to run longer than merchandise programs, leaving less time—and money—for short-term cash programs (below, left) and (2) interaction among winners is an important benefit of group-travel programs, which still account for the bulk of incentive-travel awards. Thus relatively few companies offer cash in lieu of a trip, whereas a greater number give it in lieu of specific merchandise items. Among those who use merchandise, 56% offer specific items, while 44% allow winners to select their awards from a catalogue.

One highly touted claim of incentive suppliers is that merchandise and travel are more memorable awards than cash. The survey results seem to support that contention. After asking whether, as a salesperson, the executive had ever participated in a sales incentive program (64% had), our survey asked him to "describe the program that, looking back, you consider most memorable." Eighty-six did so with the following results: 41% mentioned travel programs, 22% mentioned merchandise, and 19% mentioned cash. The other 18% were split between recognition programs (15%) and such special awards as company stock and better cars (3%). The following are some of their comments:

- "It was the first program I

was ever in. I accumulated points for sales I made and cashed in my points for a camera. I had been selling one month, and I thought it was great."

- "There was a football theme, and we accumulated points based on the highest percentage over quota on units and/or dollars. The prizes were trips to bowl games or the cash equivalent."
- "We once had a three-month program on a certain product line for which S&H Green Stamps were awarded weekly. I won enough to cover my lawn with them. My wife was in heaven spending them."
- "A five-month sales contest that sent the winner and his wife on a 12-day trip to London as part of a company-sponsored golf event."
- "Travel as a very young couple; merchandise as our home was maturing; and recognition and more sophisticated travel as maturity took over."
- "The first one, which offered merchandise prizes when we were struggling financially as a young family."

Not all the executives had happy memories. One, for example, won gift certificates for shoes. "I won about 20 pairs," he says. "However, I would have preferred money." Another writes, "I won a trip to the Greenbriar for a top salesman award. *But* [emphasis his], it could have been really great if it had been with the wife and not in the middle of winter."

Also, perceived inequities rankle long after an event is over. One executive's "most memorable" is "the one I lost to a guy who won it with a bunch of windfall accounts. Even he, in his acceptance speech admitted he didn't deserve it."

Such negative memories are a reminder of the need for careful planning and evaluation of incentive programs, particularly regarding fairness. The survey responses suggest that companies are strengthening their planning and evaluation activities. But there is room for improvement. For example, a surprising 15% of sales and marketing executives still do not formally evaluate the effectiveness of incentive programs. Considering the monetary costs, the management time involved in planning and executing programs, and the potential they have for demoralizing

Some sales catalogs look used

. . . Some get used

The McBee SWING HINGE® Linking Arm Prong Binder is designed for paper *handling*, not just paper holding. Compare its advantages:

A. Compact — Unlike ring binders, partially curved prongs permit material to be held closely against the back to save valuable shelf space. The SWING HINGE® mechanism offers superior page protection and will not bulge or bruise the cover.

B. Controllable — When opened, sheets remain in perfect alignment, much like a bound book. Pages can be added or removed easily, no matter how full the binder is.

C. Rugged — Our positive lock and unique mechanism hold contents intact and looking sharp — even if dropped.

Today $20 worth of gas will get you from Washington, D.C. to Boston. In 1982 would you believe... New York City?*

Between ever accelerating costs and the fuel crunch, many fleet operators are losing their drive. In fact by 1982, your fleet's effectiveness could be cut to half speed as operating costs will have probably doubled.

So shift gears now and plan for the future with... The Associates Econo-Misers.

We have the answers when it comes to type of use, resale value, availability, trunk space, image, comfort, and most importantly, the latest fuel-efficient combinations. Pioneering a whole new dimension in fleet leasing, we've analyzed all the 1980 models, enabling us to combine the right fleet with the most cost-efficient leasing program for you.

We not only offer management help so you can tend to business instead of your fleet, we also help you deal with costly decisions today ensuring a more profitable tomorrow.

We're The Associates... American Pioneer of Transportation Finance. Nobody knows transportation like we do. It's been our business for over 60 years. So, let The Associates Econo-Misers get more mileage out of your fleet today, tomorrow and in 1982!

Based on the 1980 cost per gallon of gasoline of $1.00 and an EPA average of 20 miles per gallon vs. a projected 1982 cost per gallon of $2.00 in the same car averaging 20 miles per gallon.

salespeople if they are perceived to be inequitable, those managers may be missing a bet for making their programs more effective.

Sales and marketing executives who do evaluate their sales incentives generally measure unit sales growth during the program or sales force participation (Table B, page 58). Polling the salespeople's reactions and measuring changes in market share are also popular yardsticks of effectiveness.

S&MM asked executives what steps they take to make their programs fair. A compendium of their suggestions appears in the tips box on page 62. The following were mentioned mostly frequently:

- Set individual, realistic quotas.
- Spell out the requirements up front.
- Let participants know regularly where they stand.

Even if you do all those things, don't be surprised if someone feels cheated. Says one executive, "We haven't yet found a good way to make them fair." Adds another, "We set incentive quotas at a very safe percentage over forecast. They're still not fair." A third comments, "We assume that no program is fair to all. But we try to make the ground rules fair and make each individual's added efforts pay off."

Setting the ground rules to encourage broad participation is a strategy many executives say they use. "Never offer a contest where only one person can win," a marketing manager advises. "Instead, offer one in which everyone *could* win."

One of the reasons incentive programs are strong motiva-

tors is that they offer salespeople recognition for their achievement. In fact, many sales and marketing executives believe that the recognition is even more important than the award. So it's natural that a number of them capitalize on the sales force's hunger for notice by sponsoring formal recognition programs for top achievers.

Our survey finds that 52% of sales and marketing executives (including 65% of this year's incentive users and 25% of the nonusers) have such programs (Table A, page 57). They range in format from presentations of plaques and cups at the annual sales meeting to membership in president's clubs with such tokens of achievement as travel awards, special blazers, trophies, special business cards, and diamond rings.

A few give their elite an even more special award. Top achievers form a salesmen's council, which meets with the company's top managers at specified times during the year.

But whatever the award—a meeting with the president, a $100 bill, a toaster, or a trip to Rome—the principle is the same: give a little to get a lot. And if your experience is like that of the majority of the sales and marketing executives who responded to S&MM's survey, you'll be glad you did. S&MM

TABLE OF CONTENTS APRIL 28, 1980

What's coming up

New face for Maybelline. The Schering-Plough subsidiary has a reputation for artfully imitating its competitors in the cosmetics business. Now it's bringing out a line of face treatments that has just a trace of originality. The outcome is crucial. May 19.

Customer sales planning. Marketing professor Daniel Caust explains a grid that enables salespeople to get the most out of a territory—and lets managers get the most out of salespeople. May 19.

An S&MM Special Section: Industrial Advertising. Case histories and tips on using advertising for best results. Plus, an exclusive S&MM survey on what sales executives think of (and contribute to) the advertising process. May 19.

S&MM's Survey of Buying Power. Our annual survey of population change, retail sales, and household income presents the statistics that point the way to consumer behavior. July 28.

Address all manuscripts and correspondence relating to editorial matters to The Editor, Sales & Marketing Management, 633 Third Ave., New York, N.Y. 10017.

Because S&MM is almost totally staff written, only a very small number of contributed articles can be accepted for publication. For that reason, contributors are urged to submit an initial query along with an outline.

All unsolicited manuscripts must be accompanied by a return envelope with sufficient first-class postage. We regret that those arriving without such postage cannot be returned.

FEATURES

7 **The 1980 Survey of Industrial Purchasing Power**
Users tell how the Survey helps them uncover new markets, measure sales coverage, pinpoint key customers—and more.

20 **Only the best**
An inside look at why government agencies rely on the same data base that is the source of Survey statistics.

25 **What is this thing called SIC?**
The Standard Industrial Classification system is one of industrial companies' most flexible analytical tools.

28 **1980 Survey SIC plant and shipments totals.**
The only published source of 1980 shipments for 4-digit industries, offering deeper insights into markets.

35 **Alphabetical list of S&MM's 300 metropolitan areas**
Metropolitan area codes—the key to grouping the nation's counties into their respective metropolitan markets.

37 **1980 Survey county-by-county totals**
Use geographical data on customer industries to focus your selling efforts where the best prospects are located.

SURVEY HIGHLIGHTS

7 **Top 10 states in manufacturing shipments**

8 **Regional and state summaries**

9 **Top 50 counties in manufacturing activity**

10 **Profile of 50 biggest manufacturing industries**

12 **50 leading industrial metropolitan markets**

16 **How to use employment data for local markets**

17 **Survey vs. government shipments data**

18 **Counties with the most prospects**

18 **Plant-count benchmarks for using Survey data**

THE 1980 SURVEY OF INDUSTRIAL PURCHASING POWER

Putting profitable sales into perspective

By THAYER C. TAYLOR
Editorial Director/
Survey of Industrial Purchasing Power

Robert C. Miller, marketing vice president at Northern Air Freight, Seattle, uses it to uncover new market opportunities.

Jay C. Jost, when he was southern regional sales manager of Dexter's Mogul Puritan water treatment chemicals division, used it to monitor the territorial penetration achieved by his junior salespeople and the key account activity of his senior salespeople.

Robert M. Glassford, senior business analyst at Square D. Co., Palatine, IL, uses it to plan future sales force needs against shifts among customer industries.

"It" is Sales & Marketing Management's annual *Survey of Industrial Purchasing Power,* which provides marketers with the most up-to-date published source of statistical information on 4-digit Standard Industrial Classification (SIC) industries and their geographical distribution at the county level (see page 25 for SIC description). A special feature of the *Survey* is its unique annual shipments total for 457 manufacturing industries and 2,843 counties, information that previously was available to marketers only once every five years when the Census Bureau conducted the quinquennial *Census of Manufactures.*

Northern Air Freight's Robert Miller has carved out an expanding foothold in the highly competitive airfreight-forwarding business with a novel pricing strategy that pegs rates to product density (see S&MM, May 14, 1979). When scouting new markets, he carefully scrutinizes the *Survey* data on a county's share of U.S. shipments of customer SIC industries.

Having achieved a good business in hauling oil-field machinery, SIC 3533, when the Alaskan pipeline was being built, he looks for counties shown by the *Survey* to have a significant share of that indus-

try's shipments. Harris County, where Houston is located, proved to be such a county, with a 26% share.

Because this suggested he should open a sales office in Houston, he checked the *Survey* to identify other promising industry prospects located in the county that would help the new sales office get off to a flying start. He learned that a single plant in Harris, for example, turns out 19% of U.S. shipments of nonferrous forgings, SIC 3463.

Miller also relies on the *Survey* for "a bird's-eye view of a local market to see where my existing sales offices can generate additional business. Because Chicago is an important distribution point, I make a list of the counties surrounding Cook County, which will include Kane, Kankakee, Lake, McHenry, and Will in Illinois, and Lake and Porter in Indiana. I learned that Kane is an important producer of gaskets, packing, and sealing devices, SIC 3293, where four plants account for 7.3% of U.S. shipments, and that five plants in Lake County, IN, grind out 7.0% of the volume of secondary nonferrous metals, SIC 3341."

The *Survey*'s listing of SICs in a county, where such industries have 1,000 or more employees, gives Miller clues on where new routes can bring him additional sales. Here, he says, "I match pairs of highly industrialized counties and compare their individual SICs. If the same SIC shows up in both counties, I will assume there is considerable intra-industry traffic moving between the two counties and that it would qualify as a profitable route."

As former southern regional sales manager for Dexter's Mogul Puritan division (he is currently marketing administrator at Rolfite, Stamford, CT), Jay C. Jost used the county

N.A.—Not applicable.

Total Shipments: Output of all manufacturing establishments. **Total Plants:** Number of establishments with 20 or more employees. **Average Shipments Per Plant:** A mathematical average computed by dividing number of plants into total shipments. **Leading SIC:** The 4-digit manufacturing industry with the largest volume of shipments among those listed within the county. The next three columns refer to the leading SIC industry: its shipments by plants within the county, and those shipments as a share of the industry's U.S. total and as a share of the county's all-manufacturing total. For SIC definitions, see the table starting on page 28.

Note: Details may not add to totals due to rounding.

plant total number to evaluate the territorial penetration achieved by his sales force. "At the time," he recalls, "we enjoyed a 6% share of the water-treatment-chemicals business. I made that ratio the norm for analyzing the efficiency of my salespeople in covering prospects in their territories.

"As soon as I received the *Survey* each year, I'd make a list of the counties in each salesperson's territory. In one column I would enter the number of accounts he called on. In a second column, I inserted the number of total plants listed in the *Survey*, since every manufacturing plant has a boiler and/or cooling tower and thus is a prospect.

"If the salesman's accounts came to 10% of the *Survey* total, I'd figure he was doing a good job. If the ratio was under 6%, I'd ask him 'how come, why aren't all these plants being called on?' "

Jost used the total plant count for evaluating the efforts of new and junior salespeople as well as those not meeting quota. The number of large plants, with 100 or more employees, was used as a check on

"Whose idea was it to pick St. Louis for a meeting?"
"Haven't you heard the boss singing his praises?"
St.Louis
The Meetin lace

Jazz up your next meeting: Come to St. Louis.

Our excellent hotel and meeting facilities will set the tempo for success. You'll also discover a multitude of upbeat activities and exciting nightlife. Everything from riverboat restaurants, ragtime and Dixieland—to the disco beat of the latest West County night spots.

And the prices may surprise you. St. Louis, for instance, is 28% less per diem than Chicago.*

So get the rhythm and keep it, from the first session to the last seminar. For more details call or write: John G. Walsh, 7900 Forsyth, St. Louis, Mo. 63105; (314) 889-2813.

the efficiency of the senior sales personnel. "I figured that if a man had been working a territory for three to five years, he should be getting orders from all of the most important prospects."

Here, Jost supplemented the *Survey* data on large plants by referring to industrial directories to ascertain the corporate affiliation of the large plants. "That way," he notes, "if the *Survey* showed four large plants in a county and the salesperson told me only two were worth calling on, I could tell him that I disagreed, that so-and-so has a big operation in his territory and should be giving us some business."

Jost also paid close attention to the SIC mix in his territories, as provided by the *Survey.* This was especially helpful to his sales forecasting activity when warning signals of a slowing economy were flashing. "I knew from experience that certain industries are recession-proof, such as food processing. If it looked like hard times were ahead, I would isolate those counties where food processing was an important activity and advise the sales people to give those plants extra attention in the upcoming forecast period."

For Robert M. Glassford, senior analyst in the business information and research department, Square D, the *Survey*'s shipments data are a critical input to his long-range planning studies. Each year, he calculates the percent change in total shipments for each county covered by the company's sales force, which calls on distributors and OEM accounts. Using certain shipments-per-salesperson ratios, and comparing the most recent year-to-year percent change to long-term rates of change, Glassford can determine which territories will need more salespeople in the future. He can also identify, on a short-term basis, where

HAVE SALESMAN CALL

Have leads...will travel.

One out of five buys the advertised product.

Here's a timely tip on the care and feeding of salesmen. A way to make those $100 sales calls pay off. Just be sure each salesman's travel kit contains a handful of sales leads from New Equipment Digest.

There's no better strategy for developing new business and it costs so little. Last year, for example, N.E.D. produced almost 1.3 million inquiries and this year we are doing even better. Better than any other product news tabloid.

So if you are one of those hard-nosed managers who feels advertising should produce measurable sales results, you will love our bottom line. Over the past 11 years, New Equipment Digest has conducted follow-up studies on 134,000 sales leads and the information we have gathered can show you how you can get more sales from your advertising dollars. Not only will N.E.D. produce more inquiries per advertising dollar, but one out of five people who inquire actually end up buying the advertised product.

Find out how America's No. 1 product news publication can improve the return on your advertising investment.

Call Russ Carson and ask for a copy of N.E.D. Product Performance Report and N.E.D. Reader Action Report. (216) 696-7000.

Better insights into consumer markets, too

Although this *Survey* is primarily oriented to the information needs of marketers who sell to industries, the data can be used by consumer-goods marketers to gain deeper insights into the relative buying power of their local markets. Because factory paychecks are by far the biggest source of personal income, contributing more than one-fourth of consumer buying power, what happens in manufacturing can affect a local market's Effective Buying Income (EBI).

Many counties, as the table on page 9 demonstrates, are highly dependent upon one manufacturing sector. For example, SIC 3711 motor vehicles & parts accounts for 80% of the total shipments in Genesee County, MI; 64% in Oakland County, MI; and 35% in Wayne County, MI. Thus if auto sales falter this year, as most predict, it will have a negative impact on the 1980 EBI level of those counties as well as on the metropolitan markets of which they are a part.

new sales offices should be opened to exploit the emergence of a growing industrial base.

Glassford also combines the *Survey*'s shipments totals with similar information he gets from an industry trade association that provides data by trading area. Matching the two sets of statistics gives him insights on local area potential and Square D's share of that potential.

While the *Survey*, with its rich mother lode of SIC industry and county data, serves as built-in market research for many small and middle-sized companies unable to fund such a support function, the annual edition also gets an intensive play from bigger companies that do have their own research units. Joseph E. Miller, head of technical market planning at the Chicago research center of Sherwin-Williams's coatings division, says, "The *Survey of Industrial Purchasing Power* provides an excellent perspective and a 'second opinion' regarding [internally] generated market research."

He scans the Highlight tables as a "quality control" check on the company's sales strategy plans. Thus the table on the 50 leading counties (see page 9), which includes the biggest SIC industry in each county, is analyzed to make sure that the salespeople don't overlook those industries. Likewise, the shipments totals in the profile of the 50 leading manufacturing industries (see page 10) are "used to project sales increases in relevant SIC areas as a function of [our] shipments forecasts."

The *Survey*'s SIC industry totals (starting on page 28) help Miller to calculate Sherwin-Williams's market share for each of its customer industries. The "% in large plants" column

1980 OUTLOOK

Aerospace leads the way—but look out for Big Cheese

Despite the slower economic growth expected for 1980, there are several industries whose shipments will increase at a strong clip, offering heady prospects for industrial marketers. The aerospace complex, buoyed by stepped-up defense outlays and orders from airlines around the world, will lead the growth sweepstakes in 1980, says the Commerce Dept.'s annual *U.S. Industrial Outlook* report.

The three fastest-growing major industries (shipments of $5 billion or more) will be aircraft engines and parts and space propulsion units and parts, up 21% in real terms; aircraft, up 13%; and aircraft equipment, up 11%. Of the 13 other 4-digit Standard Industrial Classification (SIC) industries whose shipments will rise more than 3% in real terms, 6 are in chemicals, 5 in foods.

Prepared by the department's industry and trade division, the annual *Outlook* boasts new features this year, including: (1) input-output charts for key industries that show the relative importance of supply sources and customer segments; (2) ranking of 150 industries by growth prospects for one and five years ahead; and (3) an analysis of the small-business climate in the 1980s.

The 518-page volume serves as a market planning department for medium and smaller-sized industrial marketers. Besides the wealth of historical data on output, employment, and prices for individual industries, there are helpful analyses of the significant factors that are expected to affect industries over the next five years.

SIC	*Industry*	*% Real Growth 1979–80*	*1980 Shipments Forecast (Mil. 1979$)*
3724	Aircraft engines & parts	+21.2%	$15,568

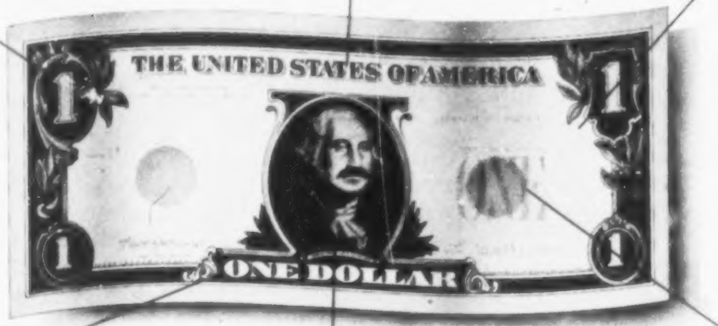
Grab the Spanish dollar.



THE UNITED STATES OF AMERICA
1
1
1
1
ONE DOLLAR

It looks exactly the same as the American dollar.

It's worth exactly the same as the American dollar.

It's used to buy consumer goods just like the American dollar.

It has the same purchasing power as the American dollar. (Over $7 billion just in the Los Angeles area).

It's in the hands of 1,500,000 Spanish speaking people in the Los Angeles area who believe it's the American dollar.

It's currently being missed out by the people that manage the American dollar: The Media Buyers.

Your only way to grab the Spanish dollar is by reaching the people who own it. And La Opinión is their newspaper. For more information, call collect (213) 748-1191. It's about time you started thinking "Spanish."

LA OPINION

The only Spanish language daily since 1926.

in the *Survey*'s county section (starting on page 37), he notes, "gives us insight into how well we have deployed our sales coverage" in capturing the bigger prospects."

Industrial marketers who want to get the most from their distributors and manufacturers' reps can also profit from the *Survey*. When Emco-Lux, Columbus, OH, planned a sales contest among dealers last year to boost awareness of its tools and machinery, it made the *Survey*'s "% of U.S. shipments" data the key factor for setting dealer dollar sales targets.

First, the percent of U.S. shipments for each county in a dealer's market were totalled and used as an index for setting his sales target. The sales contest's promotion goal was $500,000. This figure, multiplied by the index, generated the assigned sales target. Each percent of sales that topped the target was counted as a point. Here's how the procedure went:

	Dealer
% potential	1.5%
Sales target (% potential × $500,000)	$ 7,500
Actual sales	$10,000
% over target	33.3%
Number of points	33

According to President Harold Lux, "the use of the index we created from the S&MM *Survey* led to excellent sales results."

Signposts for the road to "excellent results" are sprinkled throughout the *Survey*. All it takes to benefit from them is a little bit of digging, a sense of ingenuity, and determination to make this year's profit-building performance a substantial improvement over last year's. ▪

How to use the employment data to compute local market estimates

Marketers of personal-use industrial products such as hand towels or protective eyeglasses are more dependent upon employment totals than shipments in estimating their sales potential or comparing local markets. Hence, the *Survey* includes employment totals in the SIC Industry section that starts on Page 28. This information can be used to develop employment estimates at the local market level.

In the following example, a marketer selling to furniture industry segments wants to develop employment estimates for Cook County, IL. Here's the simple, two-step method he uses to build an employment profile for four 4-digit customer industries:

STEP ONE

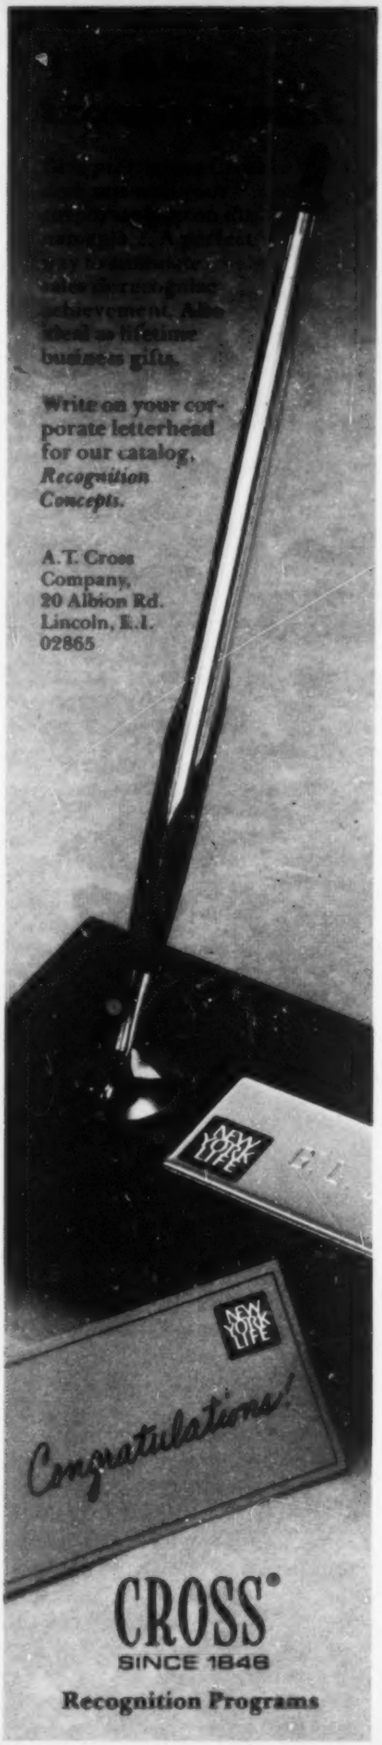
First, using the industry totals on page 28, he develops output-per-employee ratios:

SIC	*Industry*	*Shipments ($Mil.)*	÷	*Employment*	=	*Output Per Employee*
2511	Wood household furniture	$5,132.8		133,445		$38,464
2512	Upholstered household furniture	3,615.2		100,688		35,905
2514	Metal household furniture	1,551.2		34,733		44,661
2515	Mattresses and bedsprings	1,567.9		37,881		41,390

STEP TWO

Then, he goes to the county section starting on page 37, looks up Cook County, IL, and divides the shipments data for each industry by the relevant output ratio to derive employment estimates.

SIC	*Industry*	*Shipments ($Mil.)*	÷	*Output Ratio*	=	*Employment Estimate*
2511	Wood household furniture	$ 77.9		$38,464		2,025
2512	Upholstered household furniture	48.8		39,905		1,359
2514	Metal household furniture	129.3		44,661		2,895
2515	Mattresses and bedsprings	90.7		41,390		2,191



[illegible] A perfect way to [illegible] sales or recognize achievement. Also ideal as lifetime business gifts.

NA—Not available.

[1] EIS's 1979 shipments totals not comparable with 1978 totals because it has revised its shipments-per-employee ratios, plant and employment totals in line with the findings of the 1977 *Census of Manufactures*.

[2] EIS's data bank does not include plants with less than 20 employees or establishments in Alaska and Hawaii.

[3] Census Bureau's durable goods miscellaneous category includes SIC 24 lumber, SIC 25 furniture, and SIC 39 other durable goods. The EIS figure is in parentheses because it represents a double-counting of SICs 24 and 25 as well as $22,825 million for "miscellaneous manufacturing industries."

[4] Census Bureau's nondurable goods miscellaneous category includes SIC 23 apparel, SIC 27 printing & publishing, and SIC 31 leather. The EIS figure is in parentheses because it represents double-counting of those three SICs.

Caution on comparisons

Economic Information Systems (EIS), whose data banks are the source of the industry and geographic details contained in S&MM's annual *Survey of Industrial Purchasing Power*, has updated its files in line with the results of the 1977 *Census of Manufactures*. Affected are its plant counts, employment totals, and the critical shipments-per-employee ratios. Consequently, certain data may appear inconsistent with those appearing in prior *Surveys*. That's because, up to now, EIS had to rely on the 1972 *Census of Manufactures* as its benchmark. As any marketer knows, the further one moves away from a Census year, the weaker the benchmark becomes. Complicating the usual tricky estimating chore was the inflationary tempo in producer prices that has occurred since the 1973–74 oil embargo, a situation that can affect shipments totals as well as shipments-per-employee ratios. Hence, users of the 1980 *Survey* can be assured that not only are they receiving the most current information published—the latest government data apply to the year 1977—but the most viable because it reflects the findings from the 1977 *Census of Manufactures*.

ACB's newspaper advertising research is the most comprehensive available anywhere. ACB reads national and display retail advertising in every U.S. daily and Sunday newspaper to provide in-depth data—customized to meet your exact requirements—so you can plan more productive newspaper advertising. This is all-inclusive research, exclusive with ACB and it has a unique name: MINTSYSTEM, Marketing Intelligence Tracking System.

Only ACB's MINTSYSTEM Reporting will give you precise answers to such fundamental newspaper advertising questions as these:

"How much is the competition spending on newspaper advertising?"

"Where and when—exactly—are your competitors spending their newspaper advertising and promotion dollars?"

"What advertising appeals and techniques are competitors using?"

"How are retailers in various markets pricing your products vs. competitive products?"

"Are key retailers promoting your brand or your competitors'?"

"Are you getting the most for your Co-op dollars?"

"Which retailers are key to your sales efforts and which are not?"

"What new, innovative advertising approaches are working?"

"What about the seasonality? Are you missing out by not heavying-up at certain periods?"

"What are the market trends you should be taking advantage of?"

Today, these facts and hundreds of others are being used by more than a thousand manufacturers, service firms, ad agencies and merchandisers.

Call or write your nearest ACB office and learn how we can design the right research program to make your newspaper advertising program more effective or send for our catalog 100 A.

You can't beat experience.

When the Department of Justice and Federal Trade Commission want current, reliable information on manufacturing industries, who do they turn to? Economic Information Systems, source of *Survey of Industrial Purchasing Power* data.

ONLY THE BEST

By JAY GOULD
President
Economic Information Systems

For federal government watchdog agencies charged with maintaining competition in the marketplace to use information from a data bank in the private sector is more than a case of man-bites-dog. Such is the case of Economic Information Systems (EIS), whose data bank on manufacturing establishments is used by both the Federal Trade Commission and Department of Justice as part of their economic and legal investigations of potential monopolistic trends in industry.

This is a tribute to the rigorous and detailed procedures with which EIS insures the completeness and accuracy of its data bank. It is also an assurance to users of the *Survey of Industrial Purchasing Power* that the statistics in this issue have, in the words of one government official, "substantial reliability."

The EIS data base is built from two primary files—an Establishment/Company File and an Input/Output File. The EIS Establishment/Company File contains about 20 pieces of information on each of 140,000 manufacturing establishments and mines employing 20 or more people, and 275,000 establishments in wholesaling, retailing, utilities, transportation, services, and other nonmanufacturing industries. According to the Census Bureau, manufacturing establishments with 20 or more employees account for 35.2% of manufacturing plants and 94.4% of industrial output; nonmanufacturing establishments with 20 or more represent 8.2% of nonmanufacturing locations and 75%–85% of the output.

For each establishment, the file contains a name, address, Zip Code, county, telephone number, employment figure, parent company name and address, value of shipments produced by the establishment

FTC on EIS

"The Economic Information Systems (EIS) data are a distinctive asset among publicly available sources," says John E. Kwoka Jr., staff economist in the Federal Trade Commission's Bureau of Economics, "and seem likely to play yet a greater role in future economic and legal inquiries." Kwoka's remarks were part of a presentation he made at a meeting on private sources of market-share information, sponsored by the Section of Antitrust Law, American Bar Assn. He described a number of FTC research projects using EIS data.

One project investigated the effects of market share on price-cost margins as a measure of competitive performance. A second one focussed on the nature and reasons for market-share patterns. "Market definitions, market shares, descriptions of the firms involved, and identification of their actual and potential competitors are made possible with the EIS data," the FTC economist says.

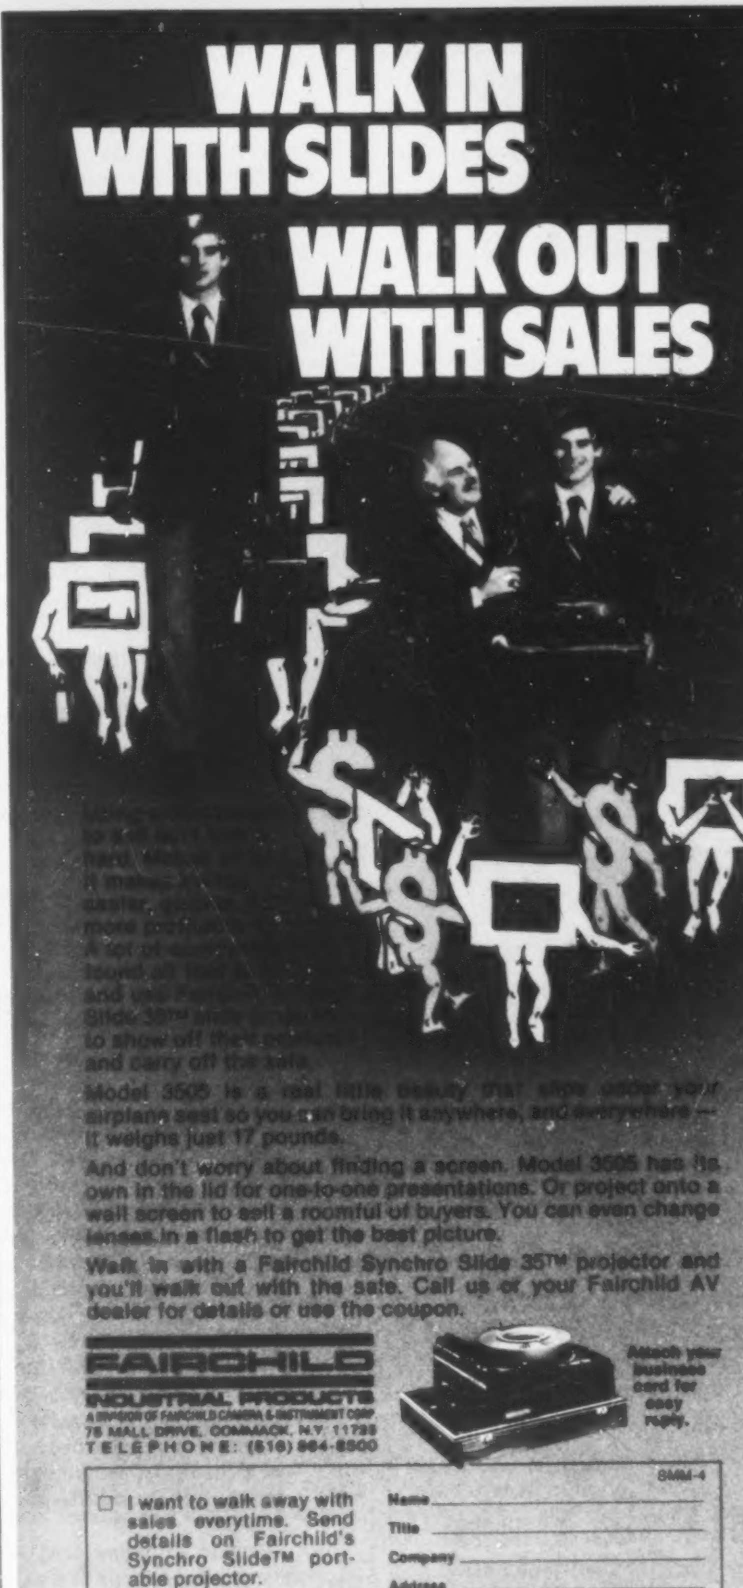
Kwoka has also compared EIS data against the concentration ratios developed by the Census Bureau from the 1972 *Census of Manufactures* calculating market shares in each 4-digit SIC industry for the top 4, 8, 20, and 50 companies. The EIS data showed an impressive close correlation with the bureau's concentration ratios. Kwoka concludes: "The EIS data appear to track the presumably accurate Census numbers quite well." This offers further assurance to users of S&MM's *Survey of Industrial Purchasing Power* that they are on the right track when estimating sales and market potentials from *Survey* yardsticks.

and total sales of the company, and a unique EIS code linking it to its parent company.

The EIS file differs from other commercially available files of establishments and/or companies because it is the only one that is matched and reconciled to: (1) Census Bureau statistics on establishment size, location, Standard Industrial Classification (SIC) industry by state and county; (2) Census Bureau statistics on company concentration by SIC industry; (3) Census Bureau statistics on industry size by employment and value of shipments; and (4) the annual reports of approximately 10,000 companies that publish financial data on their sales and establishment locations.

In identifying and quantifying establishments, EIS uses a wide variety of sources, including:

- **Mailings to companies,** listing their establishments and requesting confirmation and/or correction;
- **Clipping services,** for news of plant openings and closings, corporate mergers, and acquisitions;
- **State and industrial directories,** for identifying missing establishments;
- **Telephone directories,** to determine if establishments and companies are still in existence, and to confirm tele-



[illegible] to show off their products [illegible] and carry off the sale.

Model 3505 is a real little beauty that slips under your airplane seat so you can bring it anywhere, and everywhere — it weighs just 17 pounds.

And don't worry about finding a screen. Model 3505 has its own in the lid for one-to-one presentations. Or project onto a wall screen to sell a roomful of buyers. You can even change lenses in a flash to get the best picture.

Walk in with a Fairchild Synchro Slide 35™ projector and you'll walk out with the sale. Call us or your Fairchild AV dealer for details or use the coupon.

phone numbers and addresses;

- **Yearly review of published annual reports and Form 10-Ks** to reconcile company sales data and plant locations with EIS data;
- **The New York Times financial tape** (quarterly reports on public companies), to adjust the sales figures on an interim basis between annual reports and 10-Ks;
- **Telephone companies** throughout the country on a continuing basis, to ascribe each establishment's correct telephone number and location.

Once establishments are identified, their primary 4-digit SIC code and employment are determined and reconciled with the Census Bureau's annual *County Business Patterns*, which lists the number of establishments by employment-size class as well as total employment for each SIC industry in every county. This step, done every year, insures that the EIS file is as complete as possible. The latest year this was

EIS and Census: Why can't they agree?

Marketers who compare the *Survey of Industrial Purchasing Power's* (SIPP) plant totals with those in the Census Bureau's annual *County Business Patterns* (CBP) state reports should bear in mind the important factors as to why the two sources don't always agree.

Obviously, as Bentley H. Paykin, vice president of Economic Information Systems (EIS), points out, no private information source can duplicate the bureau's financial and personnel resources, not to mention its legal power to compel answers. Also, the CBP reports pertain to a fixed point in time whereas EIS is a dynamic system that constantly inputs new information, excises out-of-date information.

Paykin also cites the following facts of life in data collection that lead to honest differences:

"1. Establishments on the borderline of a size class—the CBP uses nine different classes—can move from one category to the next with a change in just one or two employees. Such movement can be considerable over the two-year time frame in which CBP data trail SIPP data.

"2. Employment data comparisons are inherently imprecise. CBP shows employment for a specific pay period whereas companies generally report it as an annual average. Small companies tend to inflate their employment so that many plants with 15 or 16 employees will claim to have 20.

"3. EIS's technical procedures for reconciling its files against the annual CBP reports invariably leave a residual of unreconciled plant locations. When the differences are uncovered, they continue in our file as the process of reconciliation goes on. After the file is updated, the old differences disappear but new ones appear."

Paykin stresses that "the major discrepancy between the Census Bureau and EIS is in plant totals. There is less disparity on the value of shipments, which is the key statistical measure of industrial buying power and industrial activity."

GOOD BUY
SOLD

There's a lot of general merchandise sold in the St. Pete/Tampa Metro area...more than one billion dollars worth a year. That means the area ranks second in the Southeast and among the top twenty in the country. The trend is equally impressive — up 71.5% over the past five years.

When you look at the area more closely, you'll find that St. Petersburg (Pinellas County) leads Tampa (Hillsborough County) in every retail category from general merchandise to automobiles to apparel.

So if you want to sell something, come to THE ST. PETERSBURG TIMES and EVENING INDEPENDENT...the best buy of all.

done was for 1976.

The next step estimates the value of shipments for each establishment. Roughly speaking, estimates are derived by multiplying each establishment's employment figure by a shipments-per-employee ratio for the appropriate SIC industry, obtained from the 1977 *Census of Manufactures*. The *Census* provides sufficient data to permit EIS to calculate shipments-per-employee ratios in each industry. This refinement on a single number captures some systematic differences in economics of scale and/or technology among establishments in the same industry. Of course, it cannot account for unique establishment-by-establishment variations. These variations are subject to review by considering the establishments' corporate affiliation.

Since the corporate affiliation of each establishment is recorded, our shipments estimates are tested for consistency with company totals. For all companies that are publicly held, EIS extracts from their annual reports and 10-Ks the pertinent sales figures, less foreign sales, and compares this with the total estimated for that company's establishments. If the two totals differ, those industry and establishment shipments figures that are affected are adjusted to reflect the information in the annual report.

The accuracy of the Establishment/Company File is on the order of 90%–96%. At any given point in time, 1%–3% of all the establishments having 20+ employees are missing, 1%–3% are no longer operating, and 2%–4% require a change of information.

The second file—the Input/Output File—contains information on the sales and purchases of more than 1,000 products and services that are used in the manufacturing and commercial sectors of the economy. Input/output describes the U.S. economy by tracing the flow of products from producing industries to consuming industries and final markets.

This data set contains the technical coefficients of an input/output matrix for about 1,000 goods and services in the economy. That is, it describes how much of what factors each industry purchases, and to whom that industry sells its final product and in what amount. This information is available for about 400 commodities in the Commerce Department's *Input-Output Matrix of the U.S. Economy*.

EIS breaks this down by use of other publications—*Current Industrial Reports*, *U.S. Industrial Outlook*, *Survey of Current Business*, *Census of Manufactures*—literature, engineering manuals, and information from its clients. Over the past decade, EIS has accumulated

encyclopedic knowledge about the technology and buying requirements of each industry.

All of the data in both files are subject to continuing update and review. The Establishment/Company File is updated every three months; the Input/Output File annually. All figures thus undergo periodic change, with a variety of procedures built in to double-check irregular occurrences. Routine mail surveys of establishments and companies are conducted to catch newly opened plants and to eliminate those that have been shut down. EIS contracts with telephone companies for updates on listing changes, additions, and deletions.

A final source of much useful information is a group of EIS clients. Unsystematic feedback (corrections, verification, update) is obtained from users companies' sales forces in the field and other knowledgeable sources. In addition, a client feedback program includes certain users who are willing to provide data on their own operations to EIS.

The sheer volume of these data makes total accuracy impossible, of course, but some checks of reliability are possible. These comparisons—and indeed, the use of the data—are facilitated by the compatability of EIS data with the *Census of Manufactures*.

The 4-digit SIC industry data have been used and checked for many years by the Bureau of Economics of the Federal Trade Commission. Errors are occasionally found in establishment identification and size, and company size and rank, particularly for smaller operations. By and large, however, the data are judged by the FTC to have "substantial reliability." S&MM

Cut soaring sales costs....
....and reach
business buyers better!

Fact: Today's tight economic conditions, the energy crisis and other "uncontrollable" factors have increased the cost of doing business and thereby cut into profits—sometimes dramatically.

That is why The Maresca/Wolff Organization has developed a marketing strategy called Private Selective Communications™—a highly economical way to "call on" key executives of your best customers and prospect companies. This program enables you to:

....Give measurable response to corporate image building;
....Reach hard-to-see buying influences *and* pave the way for making your sales calls count for more;
....Communicate more often with key buying influences;
....Stretch reduced advertising budgets;
....Reach small accounts better with fewer personal calls;
....Cut down on "good will" sales calls;
....Achieve a stronger bottom line in a tough competitive market place.

Private Selective Communications™ ... a proven program that gets maximum impact...for minimum expenditure.

S&MM's FOUR SURVEY ISSUES

Each year Sales & Marketing Management publishes four *Survey* issues, which, taken together, provide a comprehensive and convenient information system for both consumer and industrial marketers. The data contained in the four *Survey* issues facilitate the analysis and selection of local geographic markets as well as target customer markets, the development of appropriate sales strategies for reaching those markets, and the comparison of the costs of selling in the geographical markets.

Survey of Buying Power, published July 28, includes the most current estimates of the demographic and socioeconomic factors of regions, states, metropolitan markets, counties, and cities.

Survey of Buying Power—Part II, published Oct. 27, rearranges the basic *Survey* data in terms of TV and newspaper markets so that markets can be evaluated in media terms; it also gives a five-year projection of metropolitan markets as well as current data on merchandise line sales for several product categories.

Survey of Selling Costs, published in February, includes detailed information on the basic selling costs of the leading metropolitan markets in the U.S. and Canada, plus data on such marketing-related expenses as sales training, sales meetings, cost per call, and salespeople's compensation.

Survey of Industrial Purchasing Power, published in April, provides data on total manufacturing activity at the county level as well as local market information on 457 customer industries that buy goods and services from consumer- and industrial-products manufacturers.

What is this thing called SIC?

A basic goal of the *Survey of Industrial Purchasing Power* is to help industrial marketers zero in on specific target markets for their individual products. The *Survey* does that by using the federal government's unique **Standard Industrial Classification (SIC)** numerical system, which subdivides all the U.S.'s businesses into finer and more detailed product industries or market segments.

The SIC coding system first divides the nation's overall economy into 10 **Basic Industries**, each of which is given a range of 2-digit classification codes. Manufacturing, for example, has 20 2-digit codes—20 to 39—each representing a **Major Group,** such as Food: SIC 20. These, in turn, are subdivided into 143 3-digit **Industry Groups,** such as dairy products: SIC 202. At the next level of detail, they are subdivided into 454 4-digit **Specific Industries,** such as creamery butter: SIC 2021; and fluid milk: SIC 2026.

4-digit popular choice

The *Survey* uses the 4-digit SIC codes because that is the level of detail most widely used by industrial marketers. When a 4-digit industry has 1,000 or more employees in a county, the name of that industry, and its 4-digit code, appears below the county name in the statistical section starting on page 37. That information tells the industrial marketer (1) where his prospects are located geographically and (2) the local area's relative importance in a given customer industry.

It is important to understand that the basic reporting unit in the SIC system, as well as in the *Survey* is the **Individual Establishment,** such as a factory, plant, or mill. Thus establishments should not be confused with companies.

In 1976, the latest year for which comparable federal government data are available, 213,512 companies classified in the manufacturing category filed income tax reports with the Internal Revenue Service. That same year, according to *County Business Patterns,* there were 310,633 manufacturing establishments.

In its quinquennial *Census of Manufactures*, the Census Bureau assembles data at two additional levels. Those are the 5-digit **Product Classes** (1,350 in number) and the 7-digit **Products or Commodities** (totalling 13,000), both considered the **Primary Products** of an industry that has the same first four digits. These data will be found

WE HAVE A BRAND NEW CONVENTION CENTER FOR WORKING.

AND ALL THIS FOR PLAYING:

A world famous spa
5 golf courses
A private ocean beach
37 tennis courts

They're all exclusively for your group of 200 or less. Because only one group meets at Palm-Aire at a time, regardless of the size. Over 15,000 square feet of meeting space waits for people who expect luxury. Even during meetings.

We have a full range of convention centers, seminar rooms and meeting suites. Each equipped with the newest acoustical and lighting systems. The finest personalized service for large groups or small.

When you're not meeting at the conference table, meet on one of our five golf courses. By the swimming pool closest to your room. Or at one of our four fine restaurants with four different atmospheres and menus.

Find out how to motivate your people. Call Saul Chato, Vice President, Hotel Sales & Marketing, toll-free at (800) 327-4960. From Canada or Florida call (305) 972-3300, collect.

in Tables 5A through 6C in the Industry Series reports.

SIC data, despite their usefulness, have certain limitations.* First, assigning all the output of a multiproduct establishment to a single 4-digit industry can overstate the total shipments figure for that industry and, conversely, understate the totals of the industries that describe the plant's secondary products.

The Industry Series reports from the 1977 *Census of Manufactures* include two helpful ratios for getting around that problem. The first ratio, **Primary Product Specialization,** indicates the proportion of a 4-digit industry's reported total shipments that is represented by the Primary Products. For example, in SIC 3523: farm machinery and equipment, Primary Products accounted for 92% of the shipments of establishments classified in that industry; 8% of the shipments represented **Secondary Products** (those goods considered the primary products of another industry).

The second ratio, **Coverage,** is the proportion of Primary Products shipped by the establishments in a 4-digit industry to the total shipments of such products by all establishments. For example, the establishments in SIC 3523 accounted for 95% of the total shipments of the Primary Products (farm machinery and equipment) that that particular industry represents. The two ratios are found in Table 5B in the Industry Series reports.

A second limitation involves **Interplant Transfers:** when products are shipped between establishments owned by the same business enterprise for further processing. In effect, the shipments are double-counted.

The third, and most serious, limitation—but, at the same time, this *Survey*'s biggest plus—is the nondisclosure rule, which bars the Census Bureau from publishing data that can identify a special establishment. Because the largest plants are often affected, their shipments will be blanked out from industry totals, leading to a serious understatement at the local area level. Economic Information Systems, New York City, from whose data bank the *Survey* information is drawn, does not face that restriction and includes such units in calculating county and industry totals. Thus in certain cases, the shipments totals on pages 28 to 32 gives a better estimate of the "real" world.

A complete list of industries, and their definitions, appears in the *Standard Industrial Classification Manual: 1972,* available from the U.S. Government Printing Office, Washington, DC 20402; price: $6.75. A 1977 *Supplement,* incorporating minor revisions, is available from the same source for 90¢. A second helpful source for data on shipments and employment are the preliminary summary reports: *Selected Statistics for Industry Groups and Industries: 1977 and 1972,* MC77-S-1(P), 35¢; and *Selected Statistics for States: 1977 and 1972,* MC77-S-2(P), 35¢. Both are available from Subscriber Services (Publications), Bureau of the Census, Washington, DC 20233. ■

**A helpful explanation of SIC and its drawbacks is contained in "SIC: The Increasing Misapplication of a Useful Tool," by Machinery & Allied Products Institute, Washington, DC; price: $3.*

1980 Survey SIC totals

U.S. plant and shipments totals for 4-digit manufacturing industries

The U.S. plant and shipments totals in this section, covering all Standard Industrial Classification (SIC) 4-digit manufacturing industries, provide insights into the total customer-base (plants) available to the marketer's sales force, and the potential market demand (shipments).

When used in conjunction with the geographical section, starting on page 37, the U.S. totals shown here can be used to calculate the relative importance of individual counties that make up sales territories. For example, two counties account for more than two-fifths of the output of SIC 3861 (photographic equipment and supplies): Monroe County, NY, home of Eastman Kodak, representing 35%; and Middlesex County, MA, Polaroid's home base, 6%.

The employment data can be used to estimate employment at the county level by (1) computing an output-per-employee ratio and (2) dividing that ratio into the county's SIC industry shipments figure.

					1979 (S&MM Est.)

DEFINITIONS—**SIC:** 4-digit classification used by federal government. **Industry:** Classification by plant's primary product. A complete listing of full SIC industry titles and definitions is in the 1972 *Standard Industrial Classification Manual*, U.S. Government Printing Office, Washington, D.C.; price $6.75. **Total Plants:** 20+ employees. **Large Plants:** 100+ employees. **Shipments:** Dollar value of all goods produced. **% In Large Plants:** Share of dollar shipments produced in plants with 100+ employees. This is a rounded number; if the share is 99.5% or more, it shows as 100%. **Employment:** Number of persons employed in plants with 20+ employees. **N.e.c.:** Not elsewhere classified.

DEFINITIONS—**SIC:** 4-digit classification used by federal government. **Industry:** Classification by plant's primary product. A complete listing of full SIC industry titles and definitions is in the 1972 *Standard Industrial Classification Manual*, U.S. Government Printing Office, Washington, D.C.; price: $6.75. **Total Plants:** 20+ employees. **Large Plants:** 100+ employees. **Shipments:** Dollar value of all goods produced. **% In Large Plants:** Share of dollar shipments produced in plants with 100+ employees. This is a rounded number; if the share is 99.5% or more, it shows as 100%. **Employment:** Number of persons employed in plants with 20+ employees. **N.e.c.:** Not elsewhere classified.

Chilton's Iron Age

Metalworking's ONLY 6-digit SIC Data Bank Marketing list

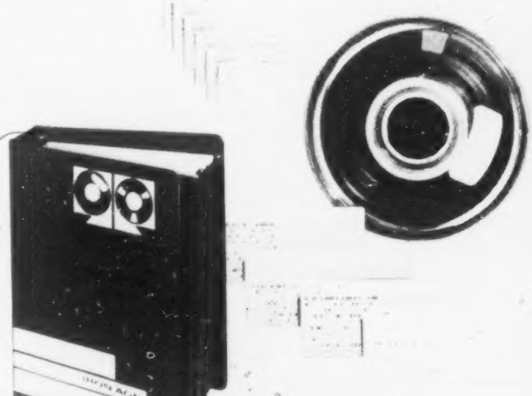
Updated semi-annually, the IRON AGE Data Bank of U.S. Metalworking now reports 6-digit marketing data on over 46,000 plant locations with nearly 1,500 SIC product code groups.

6-DIGIT SIC . . .
the *key* to pinpoint data selection
the *key* to precision marketing in metalworking

Use IRON AGE marketools to:

- classify customers and prospects
- locate new prospects and markets
- determine market potentials
- plan sales territories
- expand salesmen's call lists
- build selective direct mail lists
- classify inquiries and SIC interest
- measure sales performance
- plan new plant or warehouse locations
- design and select market survey samples
- plan and direct advertising and merchandising programs

Write for our free booklet,
"Iron Age's 6-digit SIC Manual of Metalworking Products".



The Iron Age Metalworking Data Bank.
All the tools you'll need to build a more profitable marketing program to U.S. Metalworking! For more information contact John H. Davis, Market Research Manager,
Iron Age, Chilton Way, Radnor, Pa. 19089. (215) 687-8200

DEFINITIONS—**SIC**:4-digit classification used by federal government. **Industry**: Classification by plant's primary product. A complete listing of full SIC industry titles and definitions is in the 1972 *Standard Industrial Classification Manual*, U.S. Government Printing Office, Washington, D.C., price $6.75. **Total Plants**: 20+ employees. **Large Plants**: 100+ employees. **Shipments**: Dollar value of all goods produced. **% In Large Plants**: Share of dollar shipments produced in plants with 100+ employees. This is a rounded number; if the share is 99.5% or more, it shows as 100%. **Employment**: Number of persons employed in plants with 20+ employees. **N.e.c.**: Not elsewhere classified.

How do you sell the world's biggest-$531 billion-market?*

Government Product News

Simple. Advertise to the buyers and specifiers in cities, states, and federal agencies.

We'll help you get started . . . promoting your products to the world's most lucrative market. Selling to government is no more difficult than selling to industry, once you know how.

Some 600 GPN advertisers enjoy profitable government business. More than $1 billion is spent daily by all levels of government. Can you afford to ignore this opportunity to increase your sales substantially?

The *only* publication big enough to reach the total market! Advertisers reach 89,000 government officials who plan, specify and buy for government. Government Product News produces more than 350,000 quality sales leads each year.

If any of the product categories below are yours, you could be making sales now . . .

- Audiovisual
- Automotive
- Clothing
- Lighting
- Maintenance
- Materials Handling
- Communications
- Computers
- Construction
- Environmental Control

10 Reasons Why You Should Receive Your Own Personal Copy Of

S&MM
SALES MARKETING MANAGEMENT

S&MM
SALES & MARKETING MANAGEMENT

1 You can depend on S&MM's experienced market analysts to help you develop a keen eye for **new product** and **market trends.** S&MM will tip you off early to changes in buying patterns—predict new selling opportunities with uncanny accuracy.

2 You can consult S&MM for the latest methods other top firms are using to motivate their salesmen. S&MM has all the details on the new **premium, incentive** and **compensation** setups that are sparking record performances in both large and small operations.

3 You can rely on S&MM to keep you in touch with proven authorities on industrial **advertising** and **promotion**—to be always up-to-the-minute with the latest **packaging** and merchandising ideas.

4 You'll maintain an open line to the leading specialists in **management development.** Time and again, S&MM will help you save time, trouble and money in spotting, interviewing and training others.

5 Because S&MM communicates with the top sales and marketing personalities from all over the world, you'll get the inside story on today's most successful marketing campaigns—plus the scoop on the ones that really flopped.

6 You can bet on S&MM to give you vital **market data** and statistics you need to pinpoint your marketing efforts. Whether it's the median EBI in Muskegon—the cost of a sales call in Phoenix—or the potential market for your product anywhere in the country, S&MM has got the answers.

(Many sales execs won't make a major move without consulting S&MM first. Literally thousands of marketing men depend on us to help them map their selling strategies on local, regional and national levels.)

7 S&MM is a virtual clearing house for personal success ideas. Each issue gives good, solid advice on how to keep in top emotional and physical trim—how to hone your high-level management skills—how to improve your leadership.

8 Think of S&MM as your own personal think tank. But eminently practical too. You'll find specific, proven methods for cutting **sales costs**—setting up a **budget**—developing a **catalog**—adding impact to a **sales meeting**—using **direct mail** more effectively.

9 Sales & marketing executives have discovered that S&MM tackles the most challenging, many-sided issues as well. Our in-depth research into subjects such as "Marketing Through the Outside Sales Force", "Service Management" and "Sales Compensation" are industry standards.

10 But you're not "all work and no play" and S&MM makes a special effort to charm and entertain as well as inform. It keeps you up to date on the best in restaurants across the country and gives you a "jaundiced" eye on sales problems and much, much more.

St. Clair	**240**	**All mfg.**	**107**	**32**	**1,442.2**	**.0964**	**[illegible]**
2011	Meat packing plants		7	3	393.8	1.0162	[illegible]
2865	Cyclic crudes & intermediates		2	2	305.9	5.3377	100
Saline		**All mfg.**	**10**	**3**	**32.3**	**.0022**	**53**

Ⓐ All the 2,843 counties with at least one manufacturing establishment of 20 or more employees are included, listed alphabetically by state. In each county, individual industries whose establishments have an aggregate employment of 1,000 or more are listed. These industries are at the 4-digit level of the Standard Industrial Classification (SIC) system used by the federal government. See page 25 for a discussion of SIC.

Ⓑ When a county is a part of a metropolitan area, we indicate it with a numerical code that refers to the 300 S&MM-designated metropolitan markets. To find out in which metropolitan area a county is included, consult the alphabetical listing of metro markets on page 35.

Ⓒ The "All mfg." line that appears in boldface type refers to the overall totals for all the manufacturing plants in the county with 20 or more employees. The names of the 4-digit SIC industries appear in lightface type. A complete listing of all SIC-coded industry titles is in the 1972 *Standard Industrial Classification Manual* (U.S. Government Printing Office, Washington, DC 20402; price: $6.75). A 1977 *Supplement*, embodying minor revisions, is available from the same source for 90¢. However, the *Survey* has a few more 4-digit industries than shown in the *Manual* because we have retained certain industries that were merged by the government into catchall groups.

Ⓓ This is the total number of manufacturing plants with at least 20 employees.

Ⓔ Because of the economies of scale, large plants (100 or more employees) account for a greater share of a county's manufacturing activity than is indicated by their numbers. Hence, a separate total of such establishments is provided. They can be considered key selling prospects—the ones that merit special emphasis.

Ⓕ This is the dollar value of all goods produced by the manufacturing type establishments. It is a reliable indicator of the county's buying potential because, overall, 58% of the dollar amount is expended on equipment, supplies, and materials (an additional 4% goes for new capital expenditures). However, the ratio will differ from industry to industry; an industry's particular ratio can be obtained from the 1977 *Census of Manufactures* report, *Selected Statistics for Industry Groups and Industries: 1977 and 1972*, MC77-S-1(P), available from Subscriber Services (Publications), Bureau of the Census, Washington, DC 20233, for 35¢. The shipments figure includes interplant shipments between establishments of a common ownership; however, they make up a very small share of the overall total. Also, where a 4-digit SIC industry is concerned, if a plant produces goods that fall into more than one classification, all its output is credited to the "primary" industry that describes the largest share of its output.

Ⓖ The county's "All mfg." share of U.S. shipments indicates its importance relative to other counties. The comparable ratio is provided for 4-digit industries, making it easier for the marketing executive to determine those counties that are the most important markets for his products. However, bear in mind that the percentage figure in boldface type pertains to a county's share of total U.S. shipments, the percentage figure in lightface type to the county's share of the U.S. total of a particular industry. Thus the lightface percentages, when totalled, will not add up to the boldface percentage figure.

Ⓗ The portion of a county's manufacturing output produced by the large plants will suggest the necessary level of sales coverage. Normally, the higher the percentage figure, the fewer salespeople required because proportionately fewer prospects will account for relatively more of the purchases.

1980 Survey county-by-county totals

DEFINITIONS—**SIC Industry:** Classification by plant's primary product. **N.e.c.:** Not elsewhere classified. **Metro Area Code:** Metro market that county belongs to; see list, page 35. **Total Plants:** 20+ employees. **Large Plants:** 100+ employees. **All mfg.:** Totals for all plants with 20+ employees in the county. **Shipments:** Dollar value of all goods produced. **% Of U.S.:** Boldface refers to county's share of total U.S. shipments; lightface to the SIC industry in the county and its share of the industry's total shipments. **% In Large Plants:** Share of shipments (rounded) from plants with 100+ employees; if the share is 99.5% or more, it shows as 100%.

DEFINITIONS—**SIC Industry:** Classification by plant's primary product. **N.e.c.:** Not elsewhere classified. **Metro Area Code:** Metro market that county belongs to; see list, page 35. **Total Plants:** 20+ employees. **Large Plants:** 100+ employees. **All mfg.:** Totals for all plants with 20+ employees in the county. **Shipments:** Dollar value of all goods produced. **% Of U.S.:** Boldface refers to county's share of total U.S. shipments; lightface to the SIC industry in the county and its share of the industry's total shipments. **% In Large Plants:** Share of shipments (rounded) from plants with 100+ employees; if the share is 99.5% or more, it shows as 100%.

Industrial-strength solutions for your toughest sales and marketing problems.

If you sell or market industrial products, American Management Associations has four high-calibre courses to meet your specialized needs. Because the consumer marketing or selling approach is very often the wrong approach for the industrial market.

1. INDUSTRIAL MARKETING RESEARCH presents the newest marketing research techniques with the accent on use rather than theory. No special background in math or statistics is required.

If you're an Industrial Marketing Research Analyst with 0-2 years experience, you can learn basic research fundamentals that will help you perform your job more accurately. Industrial Sales Managers can catch up with the latest research developments.

2. MARKETING THROUGH INDUSTRIAL DISTRIBUTORS is a comprehensive three-day course on how to choose the right distributor for your company, and how to utilize them to boost your sales.

Managers who can benefit from this program include Industrial Sales Managers, Marketing Managers, Managers of Dealer Development, Regional and District Sales Managers. Experience level: 0-3 years.

3. THE INDUSTRIAL PRODUCT MANAGEMENT COURSE shows you how to launch new products with the best chance of making it in the industrial marketplace.

This course is designed for Industrial Product Managers, Market Managers, Planning Managers, Sales Managers, and Purchasing, Manufacturing, R&D, Distribution, and other industrial executives who want to understand the Industrial Product Manager's job. Experience level: 0-3 years in the industrial product management field.

4. THE AMA COURSE IN SELLING TECHNICAL/INDUSTRIAL PRODUCTS is an in-depth training course that covers every aspect of selling dynamics germane to the industrial field.

This vital program is intended for anyone who sells industrial equipment, including Systems OEM, heavy machinery, chemicals and other products requiring intensive, long-term selling. Experience level: 0-3 years.

For further information on any of these courses, contact Edwin Forti, Marketing Manager, at AMA Headquarters in New York. (212) 586-8100. Or fill in the coupon below.

AMERICAN MANAGEMENT ASSOCIATIONS

Mail this coupon to: Edwin Forti, American Management Associations, 135 W. 50th St.,
New York, N.Y. 10020.

DEFINITIONS—**SIC Industry:** Classification by plant's primary product. **N.e.c.:** Not elsewhere classified. **Metro Area Code:** Metro market that county belongs to; see list, page 35. **Total Plants:** 20 + employees. **Large Plants:** 100 + employees. **All mfg.:** Totals for all plants with 20 + employees in the county. **Shipments:** Dollar value of all goods produced. **% Of U.S.** Boldface refers to county's share of total U.S. shipments; lightface to the SIC industry in the county and its share of the industry's total shipments. **% In Large Plants:** Share of shipments (rounded) from plants with 100 + employees; if the share is 99.5% or more, it shows as 100%.

DEFINITIONS—**SIC Industry:** Classification by plant's primary product. **N.e.c.:** Not elsewhere classified. **Metro Area Code:** Metro market that county belongs to; see list, page 35. **Total Plants:** 20+ employees. **Large Plants:** 100+ employees. **All mfg.:** Totals for all plants with 20+ employees in the county. **Shipments:** Dollar value of all goods produced. **% Of U.S.:** Boldface refers to county's share of total U.S. shipments; lightface to the SIC industry in the county and its share of the industry's total shipments. **% In Large Plants:** Share of shipments (rounded) from plants with 100+ employees; if the share is 99.5% or more, it shows as 100%.

DELTA AIR FREIGHT. WE'RE NO. 1 UNDER THE MOON.

Most air freight moves at night, is delivered the next day. And Delta has more night-time flights than any other airline. Which means we offer you more prime-time flights to more prime markets, over 90 of them in the U.S. and abroad.

Few shipments are too large, and none are too small. You get single-carrier responsibility, single billing and airline liability. Delta can ship anywhere in the U.S. or the world, via interline connections. Local pick-up, delivery available. In many instances, Delta Air Freight rates are lower than other freight services.

You may ship prepaid or collect, cash or approved credit. COD, Signature Service, advance charges and excess valuation available on request. For full details on rates and shipping information, just call the Delta air cargo representative nearest you.

Other Delta Air Cargo Services:

Delta Air Express gets you top priority. You can ship airport-to-airport or door-to-door.

3D™ Air Freight (Delta Density Discount)™ gives you 40% off regular freight rates. Shipments with a density of 25 lbs. or more per cubic foot get 40% discount. Applies to non-containerized shipments of 250 lbs. or more and gets the same priority as regular air freight.

Delta Air Parcel Service saves up to 50% on the cost of shipping small parcels (up to 25 lbs. each). Minimum of 10 parcels shipped door-to-door for $15 each. Airport-to-airport for $9.

DASH® (Delta Airlines Special Handling) gives your small package same-day delivery between over 80 U.S. cities. For pick-up and/or delivery call toll free (800) 638-7333 (in Baltimore, call 269-6393). You can also ship via DASH between Delta cities in the U.S. and Montreal, San Juan, Nassau, Bermuda, London, England and Frankfurt, Germany. For full details, call your local Delta cargo office.

LONG DISTANCE FOR LESS.

NEW EXPANDED SERVICE.

More cities, more ways to save! Now ITT gives you coast-to-coast phone service – at savings up to 86%.

No matter how many long distance calls you (or your company) make each month, your phone bills are higher than they should be.

ITT will show you how to cut them drastically -- regardless of how you choose to make your long distance calls.

Take our CITY-CALL℠ service, for example. You can phone from any pushbutton phone in much of the U.S. now. And we'll save you up to 86% on a single call.

Wish you could afford a private line? Our SPNS (Switched Private Network Service) gives you many of the advantages at far less cost. It's now available between 29 major cities and 12 more will be added soon.

And if you make enough calls for a WATS line, our competitive SPNS OFF-NET service gives you cost savings to more than 100 metropolitan areas automatically.

More people are getting long distance for less via ITT each month. Send in our coupon for more information.

Or call 800-221-7267 toll free. (In New York City, 212-558-9600.)

DEFINITIONS—**SIC Industry:** Classification by plant's primary product. **N.e.c.:** Not elsewhere classified. **Metro Area Code:** Metro market that county belongs to; see list, page 35. **Total Plants:** 20+ employees. **Large Plants:** 100+ employees. **All mfg.:** Totals for all plants with 20+ employees in the county. **Shipments:** Dollar value of all goods produced. **% Of U.S.:** Boldface refers to county's share of total U.S. shipments; lightface to the SIC industry in the county and its share of the industry's total shipments. **% In Large Plants:** Share of shipments (rounded) from plants with 100+ employees; if the share is 99.5% or more, it shows as 100%.

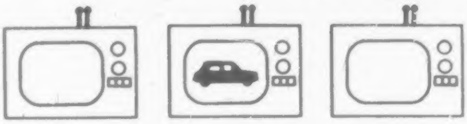
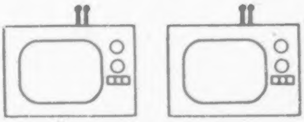
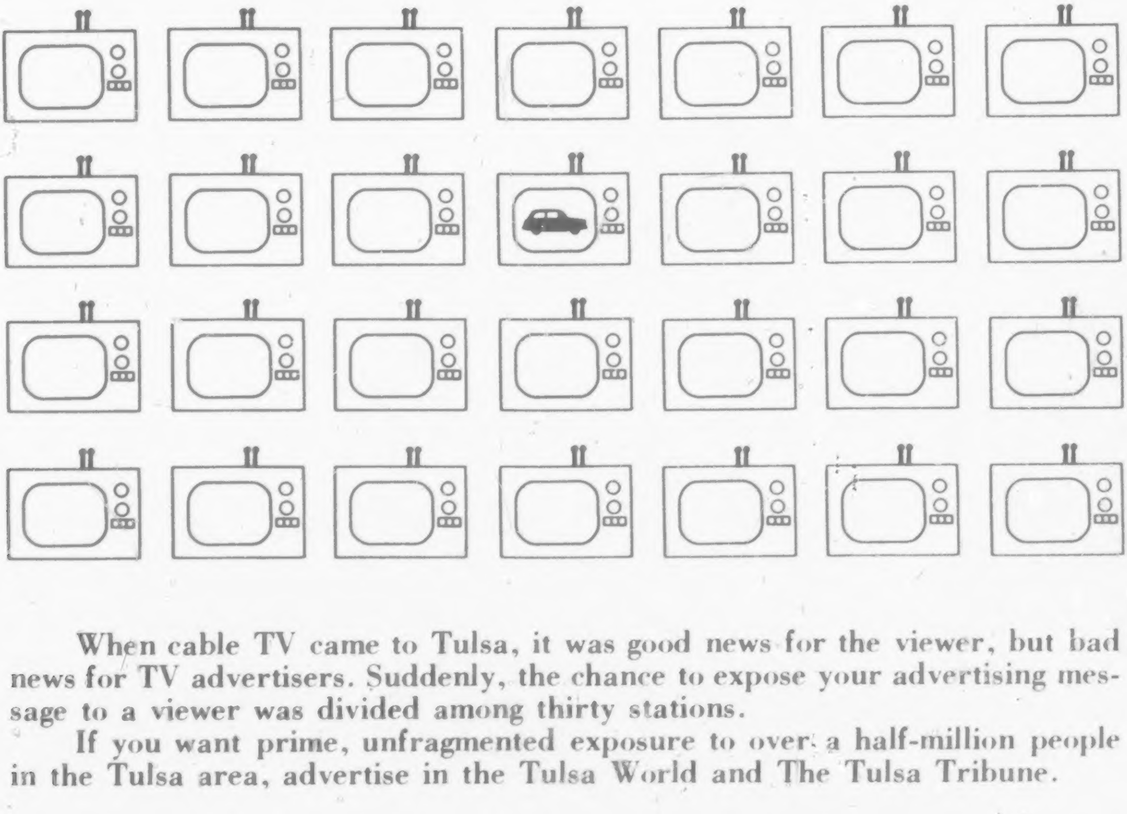
The chance of having your product seen by Tulsa TV viewers has dropped from 1 in 3



to 1 in 30!





When cable TV came to Tulsa, it was good news for the viewer, but bad news for TV advertisers. Suddenly, the chance to expose your advertising message to a viewer was divided among thirty stations.

If you want prime, unfragmented exposure to over a half-million people in the Tulsa area, advertise in the Tulsa World and The Tulsa Tribune.

TULSA WORLD ★ The Tulsa Tribune

Two Independent and Separately Owned Newspapers

DEFINITIONS—**SIC Industry:** Classification by plant's primary product. **N.e.c.:** Not elsewhere classified. **Metro Area Code:** Metro market that county belongs to; see list, page 35. **Total Plants:** 20+ employees. **Large Plants:** 100+ employees. **All mfg.:** Totals for all plants with 20+ employees in the county. **Shipments:** Dollar value of all goods produced. **% Of U.S.:** Boldface refers to county's share of total U.S. shipments; lightface to the SIC industry in the county and its share of the industry's total shipments. **% In Large Plants:** Share of shipments (rounded) from plants with 100+ employees; if the share is 99.5% or more, it shows as 100%.

We Have The Demographics You Need For Your Business Plans Through 1990

1978
1979 1980
SURVEY OF BUYING POWER 1981 1982
FORECASTER'S HANDBOOK
1983 1984 1985
1986 1987 1988
1989 1990
S&MM

The fastest, most accurate, most economical source of projected market data anywhere is the **1980 Forecaster's Handbook** from Sales & Marketing Management.

A broad statement, perhaps, but true.

Developed by the producers of the Survey of Buying Power—the gospel of sales and marketing executives for over 50 years—the **1980 Forecaster's Handbook** is based on time-tested techniques for projecting growth and change. So you can actually make your sales and marketing plans now through 1990.

EVERYTHING YOU NEED

With the important new addition of the User's Guide, you'll quickly and accurately be able to:

- assign sales territories
- develop new products
- assign sales quotas
- define markets you are in now
- define markets you should be in
- define markets you **shouldn't** be in.

And all at a fraction of the price and time involved if you contracted for a customized project.

PLUS THE TV MARKET

Expanded by 25% over last year's edition, the seven sections of the **1980 Forecaster's Handbook** give you all the information you need **now** about:

1. State and regional summaries of population, income and retail sales; plus, population by age and sex.

2. Metropolitan market rankings

3. Population, income and retail sales for metropolitan markets

4. Population by age and sex for metropolitan markets

5. TV market (ADI) rankings

6. Population, income and retail sales for TV markets

7. Population by age and sex for TV markets, plus all TV market data for 1978, 1980, 1981, 1985, and 1990.

COMPLETE MAP SECTION

Supplemented with maps which outline population, households, effective buying income, total retail sales, and buying power index, the **Forecaster's Handbook** is all contained in one binder, sturdily built to withstand constant use.

FREE BONUS

By acting now you'll receive free our new 103 page 50-State Atlas of Forecasting Data Maps, an invaluable aid in planning your market strategy.

If you have any questions about the contents or methodology of **Forecaster's Handbook**, or if you'd like to know more about its many applications for your industry, call Market Statistics at 212/986-4800, ext. 384.

SALES BUILDERS DIVISION
S&MM SALES & MARKETING MANAGEMENT
A BILL PUBLICATION
633 Third Avenue New York N.Y. 10017

Gentlemen:

Send me the all-new, 1980 edition of Sales & Marketing Management's FORECASTER'S HANDBOOK.

I understand that if I decide not to keep the Handbook, I may return it within 15 days and owe nothing. Otherwise, I will be billed for $395, plus a modest charge for postage and handling.

Act now, and you'll get our new handy 103-page "50-State Atlas of Forecasting Data Maps" and User's Guide FREE.

For information, call Market Statistics at 212/986-4800, ext. 384.

DEFINITIONS—**SIC Industry:** Classification by plant's primary product. **N.e.c.:** Not elsewhere classified. **Metro Area Code:** Metro market that county belongs to; see list, page 35. **Total Plants:** 20 + employees. **Large Plants:** 100 + employees. **All mfg.:** Totals for all plants with 20 + employees in the county. **Shipments:** Dollar value of all goods produced. **% Of U.S.:** Boldface refers to county's share of total U.S. shipments; lightface to the SIC industry in the county and its share of the industry's total shipments. **% In Large Plants:** Share of shipments (rounded) from plants with 100 + employees; if the share is 99.5% or more, it shows as 100%.

DEFINITIONS—**SIC Industry:** Classification by plant's primary product. **N.e.c.:** Not elsewhere classified. **Metro Area Code:** Metro market that county belongs to; see list, page 35. **Total Plants:** 20+ employees. **Large Plants:** 100+ employees. **All mfg.:** Totals for all plants with 20+ employees in the county. **Shipments:** Dollar value of all goods produced. **% Of U.S.:** Boldface refers to county's share of total U.S. shipments; lightface to the SIC industry in the county and its share of the industry's total shipments. **% In Large Plants:** Share of shipments (rounded) from plants with 100+ employees; if the share is 99.5% or more, it shows as 100%.

In the last four months we made over 20,000 phone calls

to give you the most comprehensive plastics marketing sales tool in the world.

If you know and sell the plastics marketplace, our 1980 Census of injection molding machines and extrusion lines will stagger you with scope, detail, and accuracy. It is the biggest, most comprehensive collection of plastics market data ever assembled. Any time. Anywhere.

Now that's a pretty big claim. But we can back it up. Here's what the Census puts at your fingertips.

Our Census gives you the exact count of every production molding machine and extruder out there in the marketplace. It gives you the machines by type, by size, by age, by origin (domestic or foreign). It gives you where they are by five digit zip code—and whether in a custom operation ...or, if a captive operation, the SIC industry in which the machine is located.

And that's just for starters. The Census also tells you whether the machine was installed in the last twelve months. And it indicates what types of materials are being processed at the plant where the machine lives—polyethylenes, polypropylenes, polystyrenes, vinyls, thermoplastics, and thermosets. And still loads more data.

The 1980 Census. Why We Do It. And How To Get It.

To maintain our position as the most precisely targeted and circulated magazine in the plastics field, we thoroughly define the marketplace. So we do the Census every five years. Not with a few hundred phone calls on which to base mathematical projections . . . but with at least one call to every processing operation out there.

We have the Census keyboarded, computer-stored, and available to you in bound report form at $4,000 for the injection molding or extrusion segments individually, or $6,000 for both. And if you think that's steep, we'll trade you a report for our phone bill.

For an important dollar outlay like this, you'll probably need more detail. Use the coupon below and we'll get it to you. Fast. Or call (212) 986-4800.

PLASTICS TECHNOLOGY
633 Third Avenue, N.Y., NY 10017

Gentlemen:
Your 1980 Census sounds like my kind of marketing tool. Please send more information today.

DEFINITIONS—**SIC Industry:** Classification by plant's primary product. **N.e.c.:** Not elsewhere classified. **Metro Area Code:** Metro market that county belongs to; see list, page 35. **Total Plants:** 20+ employees. **Large Plants:** 100+ employees. **All mfg.:** Totals for all plants with 20+ employees in the county. **Shipments:** Dollar value of all goods produced. **% Of U.S.:** Boldface refers to county's share of total U.S. shipments; lightface to the SIC industry in the county and its share of the industry's total shipments. **% In Large Plants:** Share of shipments (rounded) from plants with 100+ employees; if the share is 99.5% or more, it shows as 100%.

"F-O-R-T-U-N-E Personnel showed me how to "take the leap" from a job to a management career."

F-O-R-T-U-N-E perceptively found the "me" beyond my resume. Because they recognized my management capabilities -- as did the company they placed me with -- I'm now a Divisional General Manager. And because they care, I call on F-O-R-T-U-N-E when I have recruiting needs -- I've hired four of their candidates. I'll continue to look to F-O-R-T-U-N-E for professionalism.

F-O-R-T-U-N-E, a comprehensive nationwide personnel consulting service, can go to work for you. As specialists, our 40 plus offices will tap the employment marketplace with recruitment power that spans the entire corporate structure: Accounting & Finance; Sales/Sales Management; Marketing Management/Services; EDP/MIS; Manufacturing, Engineering, Materials Management, Purchasing; Personnel & Industrial Relations Management.

For the F-O-R-T-U-N-E office in your area, consult your local phone directories.

Personnel Agency Inc.
F-O-R-T-U-N-E®
You're in good company.

$96.79 a Sales Call!*

Make the most of them..with LaBelle's Duo-16

Duo-16 is the single-cartridge, portable sound/filmstrip projector that combines rear screen and forward projection in a single, sleek unit. It handles like an attache case and requires no set up. Plug it in, slip in the Commpak cartridge, and sit back while the Duo-16 delivers your sales message - simply, effectively. La Belle reliability and Duo-16 versatility assure you your salesmen will make the most of their sales calls.

*The McGraw-Hill Laboratory of Advertising Performance report says so!

DEFINITIONS—**SIC Industry:** Classification by plant's primary product. **N.e.c.:** Not elsewhere classified. **Metro Area Code:** Metro market that county belongs to; see list page 35. **Total Plants:** 20 + employees. **Large Plants:** 100 + employees. **All mfg.:** Totals for all plants with 20 + employees in the county. **Shipments:** Dollar value of all goods produced. **% Of U.S.:** Boldface refers to county's share of total U.S. shipments; lightface to the SIC industry in the county and its share of the industry's total shipments. **% In Large Plants:** Share of shipments (rounded) from plants with 100 + employees; if the share is 99.5% or more, it shows as 100%.

Productivity is:

Salespeople knowing how to penetrate their accounts for maximum yield.

Mr. S.E. Sanderson, Jr., President
Xerox Learning Systems
One Pickwick Plaza
Greenwich, CT 06830

Dear Mr. Sanderson:

☐ Please have one of your consultants contact me for an appointment so I can find out more about your learning system, Account Development Strategies. It is understood that this consultation will run from one to two hours and that there is no charge or obligation for it.

☐ I prefer a written briefing.

S&MM's FOUR SURVEY ISSUES

Each year Sales & Marketing Management publishes four *Survey* issues, which, taken together, provide a comprehensive and convenient information system for both consumer and industrial marketers. The data contained in the four *Survey* issues facilitate the analysis and selection of local geographic markets as well as target customer markets, the development of appropriate sales strategies for reaching those markets, and the comparison of the costs of selling in the geographical markets.

Survey of Buying Power, published July 28, includes the most current estimates of the demographic and socioeconomic factors of regions, states, metropolitan markets, counties, and cities.

Survey of Buying Power—Part II, published Oct. 27, rearranges the basic *Survey* data in terms of TV and newspaper markets so that markets can be evaluated in media terms; it also gives a five-year projection of metropolitan markets as well as current data on merchandise line sales for several product categories.

Survey of Selling Costs, published in February, includes detailed information on the basic selling costs of the leading metropolitan markets in the U.S. and Canada, plus data on such marketing-related expenses as sales training, sales meetings, cost per call, and salespeople's compensation.

Survey of Industrial Purchasing Power, published in April, provides data on total manufacturing activity at the county level as well as local market information on 457 customer industries that buy goods and services from consumer- and industrial-products manufacturers.

DEFINITIONS—**SIC Industry:** Classification by plant's primary product. **N.e.c.:** Not elsewhere classified. **Metro Area Code:** Metro market that county belongs to; see list, page 35. **Total Plants:** 20+ employees. **Large Plants:** 100+ employees. **All mfg.:** Totals for all plants with 20+ employees in the county. **Shipments:** Dollar value of all goods produced. **% Of U.S.:** Boldface refers to county's share of total U.S. shipments, lightface to the SIC industry in the county and its share of the industry's total shipments. **% In Large Plants:** Share of shipments (rounded) from plants with 100+ employees; if the share is 99.5% or more, it shows as 100%.

You just sold the boss on an incentive program to increase sales. All it involves is branded men's and women's apparel, award certificates and order forms, and prompt drop shipping.

All you need is somebody to plan and handle the whole program.

Aren't you glad Palm Beach is handling your incentive program?

Branded Label Apparel for Men and Women for Premium, Incentive and Award Programs.

Palm Beach

SPECIAL MARKETS, Department SM5
1290 Avenue of the Americas • New York, NY 10019

For more data

Information for S&MM's *Survey of Industrial Purchasing Power* is developed by Economic Information Systems from its data base of all types of industrial establishments with 20 or more employees. The *Survey* taps just a small portion of EIS's files. For example, the company can provide data for industry classifications down to the 7-digit SIC level. For more information, contact EIS at 310 Madison Ave., New York, NY 10017; 212-697-6080.

Salespeople respond to these proven motivational films.

Call (301) 948-0540

Show your salespeople one or all of these proven motivational films, then stand back! Featuring all-time great motivators like Jerry Kramer, none runs longer than 30 minutes. Perfect for your next sales meeting. Call us today for the reasonable rates and availabilities.

TITLES:

CD: – Formula for Success in Selling
F. Lee Bailey, Dr. Michael DeBakey and William Lear inspire your people as they share the formula for increased sales. (30 min.)

The Habit of Winning
Spiced with football footage. Teaches the Lombardi philosophy of "the will to win." With Jerry Kramer. (28 min.)

Are You Earning the right to Ask Them to Buy?
Discuss the problem of the "good explainer but poor closer." Features Bill Gove. (28 min.)

You, Yourself, Inc.
How to trigger that unused ability. Features Joe Powell. (24 min.)

BNA Communications Inc. Dept. FILM 040 SMM
9401 Decoverly Hall Road
Rockville, Md. 20850
(301) 948-0540

Send me complete info and rates on the four sales motivation films.

DEFINITIONS—**SIC Industry:** Classification by plant's primary product. **N.e.c.:** Not elsewhere classified. **Metro Area Code:** Metro market that county belongs to; see list, page 35. **Total Plants:** 20+ employees. **Large Plants:** 100+ employees. **All mfg.:** Totals for all plants with 20+ employees in the county. **Shipments:** Dollar value of all goods produced. **% Of U.S.:** Boldface refers to county's share of total U.S. shipments; lightface to the SIC industry in the county and its share of the industry's total shipments. **% In Large Plants:** Share of shipments (rounded) from plants with 100+ employees; if the share is 99.5% or more, it shows as 100%.

DEFINITIONS—**SIC Industry**: Classification by plant's primary product. **N.e.c.**: Not elsewhere classified. **Metro Area Code**: Metro market that county belongs to; see list, page 35. **Total Plants**: 20+ employees. **Large Plants**: 100+ employees. **All mfg.**: Totals for all plants with 20+ employees in the county. **Shipments**: Dollar value of all goods produced. **% Of U.S.**: Boldface refers to county's share of total U.S. shipments; lightface to the SIC industry in the county and its share of the industry's total shipments. **% In Large Plants**: Share of shipments (rounded) from plants with 100+ employees; if the share is 99.5% or more, it shows as 100%.

1979 (S&MM Est.)

DEFINITIONS—**SIC Industry:** Classification by plant's primary product. **N.e.c.:** Not elsewhere classified. **Metro Area Code:** Metro market that county belongs to; see list, page 35. **Total Plants:** 20+ employees. **Large Plants:** 100+ employees. **All mfg.:** Totals for all plants with 20+ employees in the county. **Shipments:** Dollar value of all goods produced. **% Of U.S.:** Boldface refers to county's share of total U.S. shipments; lightface to the SIC industry in the county and its share of the industry's total shipments. **% In Large Plants:** Share of shipments (rounded) from plants with 100+ employees; if the share is 99.5% or more, it shows as 100%.

DEFINITIONS—**SIC Industry:** Classification by plant's primary product. **N.e.c.:** Not elsewhere classified. **Metro Area Code:** Metro market that county belongs to; see list, page 35. **Total Plants:** 20+ employees. **Large Plants:** 100+ employees. **All mfg.:** Totals for all plants with 20+ employees in the county. **Shipments:** Dollar value of all goods produced. **% Of U.S.:** Boldface refers to county's share of total U.S. shipments; lightface to the SIC industry in the county and its share of the industry's total shipments. **% In Large Plants:** Share of shipments (rounded) from plants with 100+ employees; if the share is 99.5% or more, it shows as 100%.

SALES & MARKETING MANAGEMENT

Inside Out

Industrial marketing. It's a new ball game at Owatonna Tool now that two sales management teams have been combined. Page 11.

Books and L'eggs. To make the most of its entrée with retailers, Hanes tests selling children's books. Page 13.

Incentives at Swank. After shunning sales incentives for a decade, the marketer of men's accessories awaits the fruits of a "money tree." Page 18.

Bracing for a showdown. Can office-products dealers withstand the onslaught of IBM and Xerox into retailing? Just ask 'em. Page 18.

Media winners. The Peoria *Journal Star* and the San Diego *Union/Evening Tribune* take top honors in S&MM's Selling with Data Contest. Page 23.

ple, including the predominantly female service force, sell directly to most customers—except for chains with central purchasing offices. Judging from his experience with L'erin, Dearman predicts that in only a few cases will extra salespeople have to be added to accommodate the extra products.

Will there be more products to take advantage of L'eggs' entrée into retail stores? Dearman's reply: "If something comes along."

S&MM BAROMETER

To save on field selling costs, camp out

Actually, things could be worse—while the Consumer Price Index (CPI) ballooned 14.3% in the first quarter, basic field selling costs (meals, lodging, and auto rentals) rose at a significantly slower 10.0%. This is remarkably close to S&MM's predicted 10.7% increase (S&MM, Nov. 1979). Hotel rates continue to be the villain, skyrocketing 16.2% over the year-ago period. Stable food prices helped keep meal tabs to a modest 10.0% rise. But auto rentals are up only 4.7%.

Looking ahead, S&MM sees field selling costs adhering to their 10% pace in the second quarter. Meal prices will move up a little faster, but decontrol of domestic oil will nudge car rentals upwards at a brisker rate. However, recession-induced cutbacks in business travel should start having a moderating effect on hotel-room charges.

In the third quarter, the negative state of the economy should have a more pronounced effect on field selling costs, holding them to an increase in the 8.2%–8.7% range.

SALES INCENTIVES

Swank's sales grow on trees

After an absence of more than a decade, sales incentives are back at Swank. A test has shown the New York City marketer of fragrances, leather accessories, belts, jewelry, and gifts that incentives do get its salespeople to sell all product lines, rather than concentrate on those that are easiest to sell.

The theme for the current incentive program, which Swank developed with its ad agency, Shaller Rubin Associates, is a "money tree." All 130 salespeo-

AN S&MM SPECIAL SECTION

Making industrial advertising $$$$ pay

Sales executives of industrial companies overwhelmingly favor advertising, so much so that a majority would like to see their companies do more of it. But making ads pay requires teamwork among sales, marketing, advertising, and communications managers~~,~~—and that doesn't always come naturally.

Making industrial advertising $ $ $ $ pay

AN EXCLUSIVE S&MM SURVEY REVEALS

How industrial sales executives use–and view–advertising

By SALLY SCANLON
Senior Editor

Many advertising executives believe that industrial sales managers don't appreciate advertising. Given the choice, they say, sales managers would empty the ad coffers and spend the money to hire more salespeople and beef up local promotions.

Nothing could be farther from the truth. A recent survey of 1,000 S&MM readers finds that 88% of industrial companies advertise, and the sales executives of 96% of them believe that advertising supports their field sales effort. Moreover, 81% say their field sales representatives use advertising in their presentations to prospects and customers, and 63% favor an increase in their company's ad spending. (See highlights, right.)

In fact, asked how their company's advertising program could be improved, sales and marketing executives replied that they want *more*—more advertising, bigger ad budgets, increased frequency of ads, better targeted ads, and even more input from field sales managers to insure more and better coverage of local markets.

The survey, mailed in March, asked marketers about such things as their ad spending plans for the next 12 months, sales management's direct input into the advertising program, and the ad media they use. It also explored respondents' opinions about advertising's value to their marketing effort.

The highlights, at right, are based on 193 replies from industrial marketers, whose lines of business range from capital equipment and machine tools to drugs, packaging, and electronic devices. Among those who included their titles, 19% are vice presidents, 48% managers or directors, 9% national sales managers, and 9% regional sales managers. All of those whose companies advertise have direct input into their companies' advertising programs, and over half select the media used.

The 12% whose companies do not advertise said that

- Sales promotion is more effective (42%).
- Advertising is too costly (42%).
- We already know all potential customers (29%).
- We tried it and it didn't meet our objectives (8%).

Twenty-one percent of those whose companies don't advertise also mentioned other reasons for their companies' policy. Among them: "My boss doesn't believe in advertising." But if the decision to advertise were solely up to the respondents, 33% of the nonadvertisers say that they would advertise.

Business executives sometimes tell tales of ad campaigns that wreak havoc on either the advertiser or its competitors. So the survey asked, Has a particular ad campaign ever hurt your field sales effort? Nine percent said yes, with unpreparedness and bad timing blamed for most of the failures. Other causes of bad experiences include "misleading campaigns" by competitors, campaigns that caused confusion among the advertiser's customers and prospects, ads that gave the wrong information, and ads that created the wrong image for the advertiser.

Asked, What type of ads most effectively support your sales effort? 81% ranked product advertising first (see highlights). As the next article indicates though, purchasing executives don't necessarily agree with that. To see what they have to say about industrial advertising in general as well as about specific ads, turn the page. S&MM

Highlights from S&MM's survey on industrial advertising*

1. Does your company advertise?

Yes	88%
No	12

2. Who calls on your end user?

Our own sales force	78%
Distributors	44
Independent reps	30

3. Approximate annual sales of your company or division?

	Total sample	*Percent that advertises*
$10 million or less	30%	81%
$11–$25 million	17	82
$26–$50 million	19	89
$51–$100 million	11	86
$101–$500 million	12	100
$501 million or over	7	100
No answer	5	—

The following questions were asked only of the 169 respondents whose companies advertise.

4. In what media does your company or division advertise?

Trade magazines	93%
Direct mail	67
Directories	65
Newspapers	15
Radio	12
TV	6
Outdoor	2

5. Does sales management in your company have any direct input into the advertising program?

Yes	92%
No	6

6. What is your contribution to the advertising program?

Suggest content	76%
Help to set objectives	75
Evaluate results	63

Select markets	54
Set budget	46
Set campaign timing	43
O.K. budget	28

7. Does advertising support your field sales efforts?

Yes	96%
No	1

8. If yes, how?

Keeps our name in front of the buyers	90%
Gets the word out on new products or product improvements	81
Provides leads for our sales reps and/or distributors	60
Helps to presell secondary buying influences	49
Helps us explain changing market conditions to our customers	12
Gets the word out on changes in company policy	10

9. In terms of content, what type of ads most effectively support your sales effort?
(Please rank in order of effectiveness.)

	RANK			
	First	*Second*	*Third*	*Fourth*
Product ads	81%	10%	1%	1%
Service ads	8	28	20	3
Corporate/image ads	6	23	26	4
Price ads	3	5	5	28

10. Do your sales reps use or refer to your ads in their presentations?

Yes	81%
No	17

11. What are your company's plans for advertising spending in the next 12 months?

Increase it	44%
By 9% or less	15
By 10%–19%	18
By 20% or more	10
Maintain current level	43
Decrease it	5

12. If the decision to advertise were up to you, would you:

Increase your advertising	63%
Continue it at about the same level	32
Decrease it	4
Cut it out all together	0

13. Has a particular ad campaign ever hurt your field sales effort?

Yes	9%
No	89

*Percentages may add up to more or less than 100 because of multiple answers and no answers.

phased out over the past 10 years). Consumer sales (about 10% of Liquid Paper's total) are now handled by Paper Mate, another Gillette subsidiary. Moreover, the company has installed product managers for each of its three product lines. And more new products to help "white out" the competition in the office supplies business are on the way. Among the possibilities: toner for copying machines and "basically anything with ink," says McCown.

COMMUNICATIONS

Big boost for a satellite

When IBM, Aetna Life & Casualty, and Comsat General began to sell the services of their Satellite Business Systems venture last year, they expected a warm reception for the satellite-based communications system from the nation's major corporations. Instead, the response has been cautious, even cool.

By late April, only eight companies had signed up for the SBS package, which includes facsimile transmission, voice communications, teleconferencing, and data communications. Still, SBS officials call those results "positive" and say several more large customers may sign on by the time the facsimile service begins operation in January.

To improve that picture, SBS marketing specialists have begun a campaign to bolster the image of their service. They kicked off the effort with a press tour of SBS facilities at Reston, VA, and a demonstration of the new facsimile terminal made by AM Intenational,

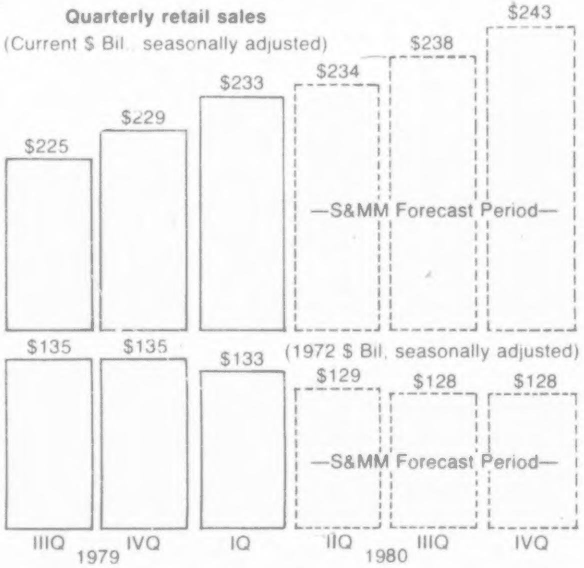
S&MM BAROMETER

Retailers riding a de-escalator

Real retail store sales (1972$) will likely show a 3.5% drop in the second quarter of 1980, but S&MM's Barometer* sees them plateauing the rest of the year. Indeed, Susan Sterne, head of Economic Analysis Associates, notes: "Compared to past recessions, corrections in consumer spending came faster and sharper this time."

Others see a continued slide in retailing. Rosanne Hersh, Goldman Sachs economist, expects a steep 9.7% fall-off in real retail sales between the first and fourth quarters. Martin Duffy, vice president–consumer economics, Data Resources, Inc., predicts a gentler 2.5% dip. He notes that each 1% increase in unemployment lops $70 billion off consumer buying power; and Hersh adds that, in addition to unemployment woes, a rising savings rate will pinch spending. Merrill Lynch Economics' senior vice president Allan MacKinnon is also gloomy about retail sales; in his opinion a key factor will be the extent to which rising unemployment hits free-spending two breadwinner families.

*The Barometer's first quarter forecast was off only 1.3%.



Note: Historical real retail sales are based on Bureau of Economic Analysis deflators.
Sources: S&MM retail sales projections are based upon personal consumption expenditure forecasts of Chase Econometrics, Data Resources, Evans Economics, Goldman Sachs, Merrill Lynch Economics, and A. Gary Shilling & Co.

and More, much more

Selling with your back to the wall

Introduction

Reeling from a combination of high costs and reduced sales, marketers may reasonably wonder, What happened to the glittering prospects for the 1980s? Actually, many of the elements for growth in this decade pointed out in S&MM's Special Report on the 1980s (Dec. 10, 1979) are still in place. But first things first.

Reckless years of ever-rising government spending and deficits, a preoccupation with printing money instead of building production capacity, and the ceaseless flow of regulations without regard to their economic effects on businesses are some of the wellsprings of our current malaise. As a consequence, marketers, for at least the balance of the year, will struggle to salvage what they can from margins squeezed by the inflation/recession crisis.

Many of the constructive steps that can be taken are detailed in this Special Report. But as marketers adapt their operations to today's circumstances, they should keep two points in mind: (1) Changes that avoid a panic atmosphere and that are carried out as the result of informed planning, will mean a sales operation capable of capitalizing on the upturn that will inevitably come; (2) Just as happened in the 1973–75 recession, there are sure to be some marketers shrewd and innovative enough to see their competitors' retrenchments as pure opportunity for them.

Remember, too, that recessions are efficient, albeit cruel, taskmasters in exposing the flabbiness, shortcomings, and weaknesses that tend to develop in less troublesome times when orders flow in, bonuses are high, and next year's goals seem a cinch. In that sense, many of the tactics recommended in this report are also highly suited for the long haul.

THE 1980s ECONOMY

For marketers, a plethora of rocks and hard places

THAYER C. TAYLOR
Senior Editor/Management Sciences

Donald R. Chinery, president of Hirsch U.S.A., a marketer of leather watch bands, is a harried man these days. Because the bank loans he took out when starting up 2½ years ago are pegged to the prime rate, larger interest payments are "forcing us to raise prices." He has had to sweeten his commission structure "to give salespeople a chance to earn more against higher living costs." Worse, the recession is "keeping people from the jewelry stores where our product is sold."

Chinery is one of a fast-growing number of marketers caught in a pincer: high inflation that squeezes profit margins and a deepening recession that cuts purchasing power. The recession is expected to be short-lived, but inflation, gestating since the mid-1960s, will persist; most now believe through the 1980s' first half.

True, the inflation rate that soared to an annual 18% rate in the year's first quarter will be pushed down by the recession's dampening effect, to possibly 11%–12% by year-end. But that improvement will be brief and illusory.

Inflation's durability will be the result of two things. One, the imbedded causes that nourished it will be relatively untouched by the recession. Two, an election-conscious Administration will try to offset rising unemployment with deficit-financing that will almost certainly reinflate the economy.

Warns Irving Leveson, director of economic studies, Hudson Institute, in a report, *Issues for the 1980s*, sent to clients last month: "There are indications that recent efforts to slow inflation may lead to more than just another downturn to be followed by even higher inflation once the reaction to rising unemployment sets in: The outlook for inflation in the 1980s is dependent on assuring that the economy will not simply be reinflated when unemployment is high."

Because the inflation problem represents the interplay of trends over a prolonged period of time, it will take policy actions on various fronts over a long term to restore price stability. Those trends, interacting with each other, are:

- Poor productivity performance.
- Rising energy costs.
- An excessive government presence.
- Built-in "stabilizers" which fuel future inflation.
- The transition to a services society.
- Demographic and lifestyle changes.

The skyrocketing inflation rate that marked the first half of the year had two elements. "There was the 'bubble effect,' " says Lawrence Chimerine, chairman, Chase Econometric Associates, "which was due to three transitory factors: (1) high interest rates, which add to the cost of doing business and are passed on like any other cost; (2) high mortgage interest rates, which inflate the Consumer Price Index (CPI) because of the way the Bureau of Labor Statistics treats them; and (3) bulging oil prices, which doubled last year. And there is the underlying core rate, which is around 10% as the result of poor productivity and rising unit labor costs."

Whittling the core rate below 10% is pegged to two big unpredictables: energy prices and productivity, says R. Jeffery Green, director of the quarterly model, Wharton Econometric Forecasting Associates. "Predicting oil prices beyond the short term is extremely chancy," he notes, "although we probably won't see the ten-fold increase that occurred in the 1970s. Future productivity trends are also hard to pinpoint because so much will depend on the incentives business gets to invest in new plant and equipment, labor force skills, the regulatory atmosphere, technological innovation, and the changing output mix."

Productivity

Most of the discussion about inflation's causes revolves around the downslide in productivity in recent years. The Council of Economic Advisers notes in its latest annual report that labor productivity growth slipped from an average annual gain of 2.5% in the 1948–55 period to 0.8% in the 1973–78 frame and actually declined 0.9 in the private business sector last year.

Michael K. Evans, president, Evans Economics, traces a strong link between declining productivity and rising inflation. His studies show "for every 1% decline in productivity we get a 2% increase in inflation." In his view, the productivity falloff stems from "a declining investment ratio, which accounts for 1% of the productivity slippage; increased cost of government regulation, another 1%; large-scale rise in the number of young, unskilled workers, 0.5%; and rising energy costs, 0.5%."

Similarly, Otto Eckstein, head of Data Resources, Inc. (DRI), points out in a special study

> **There's a psychological factor that feeds inflation. When you feel that a certain price increase is sufficient, you take a little more just because of the uncertainty about inflation.**
>
> —Floyd Hall
> President
> B. Dalton Booksellers

for the Joint Economic Committee that "an analysis of the relationship between changes in productivity and prices, hourly compensation, unit labor costs, and unit profits for the nonfinancial corporate sector indicates that sectors and industries with above-average productivity growth had significant below-average price increases. Each additional percentage point of productivity growth corresponded to a lower inflation rate of 0.73 to 1.12 percentage points."

Interestingly, productivity performance varies remarkably among industry groups. While overall growth was less than 1% a year in the 1973–78 period, Bureau of Labor Statistics data reveal that the communications complex enjoyed a robust 7.2% rate, while mining declined 4.6% a year.

Indicative of the interplay between galloping prices and their causes, inflation itself is being blamed for part of the productivity slowdown. Because inflation casts a cloud over long-range pay-offs, companies are reluctant to commit sizeable investments in new plant and equipment and research and development.

Interestingly, new management styles may be an unrecognized factor, Harvard Business School professor Robert H. Hayes, believes. Addressing a Booz Allen & Hamilton executive briefing on industrial productivity challenges of the 1980s, he pointed a finger at three "ascendant" management styles he says hurt productivity: (1) Emphasis on short-term return-on-investment ratios which discourages long-term investment, particularly R&D. "We are buying a better 'present' at the sacrifice of our future," he told his audience. (2) Marketing that places too much reliance on market surveys, consumer questionnaires, and test panels to discover consumer needs encourages incremental product changes rather than innovative new or different products which may not have an obvious market at present. (3) "Financial portfolio management" that leads to conglomerate acquisitions that do not create real value. "The total spent on acquisitions in 1979 topped $40 billion, more than was spent on R&D," he said.

If Hayes is right, it seems reasonable to suspect that management's preoccupation with short-term gains has led it to put more emphasis on advertising spending at the expense of capital spending in recent years to achieve fatter market shares. The theory is that the higher the market share the easier it is to force through price increases.

The economy's changing structure, from a manufacturing orientation to a services one, is causing many to wonder if we have the right tools for measuring productivity. Vincent E. Guiliano, a senior member of Arthur D. Little's (ADL) information systems group, contends that "definitions of productivity have not kept pace with the economic transformation brought about by the three major waves of technological change: computers, telecommunications, office automation."

OUTLOOK: If past recessions are a guide, productivity in 1980 will fall faster than it did last year because companies slash output faster than they lay off personnel in downturns. Lee Phillips, a DRI economist, sums up the consensus view by noting "unless government sets a favorable climate that will encourage business to follow through with increased investments, chances of improvement are minimal." He says DRI estimates that an annual 1% hike in productivity through the early 1980s could shave 2.1 to 2.4 points off the inflation rate by 1982.

A strong optimist, Hudson Institute's Irving Leveson sees technological change, such as "the second computer revolution we are in the midst of, bringing striking improvements."

Energy

Ever-ascending prices at the gas pump dramatize energy's contribution to our inflationary woes since 1973. Last year alone, energy prices shot up 37%, almost three times faster than the CPI.

Aside from raising the costs of practically everything produced, rocketing energy costs make obsolete a considerable part of the country's capital stock.

Of course, the mounting bill paid each year for imported oil drains consumer purchasing power. Between 1978 and 1980 alone, it will increase

> **Will your income and lifestyle be better next year than this year? Will you or your spouse be able to afford that new car? Take a vacation? Will the prospects for retirement be better next year than now? For millions of Americans, the answer is no. I think there is something seriously wrong when our hopes for the future are simply to survive rather than prosper.**

> of the American Business Press

Mechanics of the swindle

The practice of indiscriminately increasing the supply of money—inflation—gives politicians the ability to have their cake and eat it too. They are cautious about raising taxes too fast, for fear of revolt (as we have seen in recent years); this revolt could result in their failure to be reelected or, if taxation became bad enough, they could be physically thrown out of office (a la the American Revolution). On the other hand, we know that the surest way to be voted out of office is to fail to respond to the Expediency Factors of voters, so vote-conscious politicians certainly cannot afford to cut back on government "functions."

Therefore, inflation provides politicians with a way out. *Inflation is a hidden tax (i.e., a hidden form of taxation).* By printing up enough "money" to, in effect, cover the remainder of each year's deficit, Uncle Sam gets off the hook. Individuals see prices rising sky high as a result of this "solution," but they do not understand why. As a result, not only do they not revolt against government, but they take up government's battle cry to "fight inflation," following its lead in pointing a guilty finger at all the wrong parties. The whole ludicrous situation is tantamount to a bank robber shouting to a bunch of depositors, "The culprits went that way; let's get them."

The question of whether inflation can be stopped avoids the real question. Of couse inflation can be stopped—simply by shutting off the printing presses. The question is whether those in power will stop it or whether enough people will ever sufficiently understand it to get mad enough to force those in power to stop it.

From "Restoring the American Dream" by Robert J. Ringer, published by QED/Harper & Row, New York

---

around $50 billion. "We cannot earn the foreign exchange with exports to pay this bill," says Barry P. Bosworth, senior fellow, Brookings Institution, "and the continued downward pressure on the dollar adds to inflation by raising the cost of imported goods." Ironically, in a reverse twist, OPEC itself contends that the shrinking dollar forces it to up oil prices to avoid a loss in its own purchasing power.

OUTLOOK: As long as the U.S. remains highly dependent on imported oil, the economy will be prey to energy shocks emanating from an unstable Middle East. Reducing our dependence will require tremendous investments in domestic oil and gas facilities—at least $25–$30 billion a year through the decade, according to the Dept. of Energy, at least $30–$35 billion, according to private estimates.

Government

Less government spending is the credo of almost every politician running for office from Washington D.C. to local hamlets, reflective of the conviction that government is one of inflation's principal creators. The federal contribution comes from deficit financing and increasing regulation.

While it's true that federal spending as a share of gross national product has trended downwards in recent years (it will shortly move up, as it always does in a recession), the deficits, on a cumulative basis, have taken awesome leaps. The coincidence of larger deficits and faster rising prices is no accident. (See box above.)

In the first half of the 1960s, for example, federal red ink aggregated $20.9 billion and the CPI crept up 4.7%. Since then, both deficits and prices have ballooned at faster rates—in the last half of the 1970s, the cumulative deficits totaled $233.2 billion, the CPI soared 34.9%.

Much of this is due to the social engineering programs launched with great hopes in the 1960s and to the redistribution of income from one group to another in the form of transfer payments. Between 1965 and 1975, transfer payments shot up from 5.7% of total personal income to 14.2% and, as an equivalent of wages and salaries, climbed even more spectacularly, from 8.3% to 22.1%.

Along with deficits, the mushrooming regulatory agencies have fed inflation by saddling businesses and consumers with increased costs. During the 1970s alone, 21 new regulatory agencies were created, bringing the total to 57, and, according to the Center for the Study of American Business, their aggregate budget swelled more than five-fold, from $866 million to $5.5 billion.

Murray L. Weidenbaum, director of the center, estimates that businesses and consumers laid out $97.9 billion to comply with the rules last year. There are hidden costs, too, he adds, such as the 10% of capital spending and an unknown amount of R&D that are diverted from innovative uses.

OUTLOOK: Public outcry against higher taxes and increasing dissatisfaction with the excesses of regulatory agencies will reduce the impact these two areas have on feeding inflationary tendencies. In the short term, no one expects the Administration to produce the $16.5 billion surplus promised for fiscal 1981. The Congressional

Budget Office listed a sensible program for cutting $18.1 billion from the 1981 budget, but the President studiously ignored it when he delivered a second budget message within three months of the first. "Rather than make major cuts in spending," argues Carol Brock Kenney, senior economist, Shearson Loeb Rhoades, "the Administration achieved its surplus by inflationary-boosting tax receipts and new revenue-raising measures. And the theoretical surplus promises to evaporate quickly with the recession."

A more favorable regulatory climate is also in the cards. Congress's clipping of the FTC's wings last month will not be lost on regulatory czars.

A. George Gols, ADL's vice president–managerial economics, thinks "a better integration between environmental management and its economic consequences will eliminate the nuisance type rules." He also sees a greater use of tax incentives and tax penalties to bring about desired evironmental conditions.

Built-in stabilizers

The 14.3% increase in benefits that will be given next month to 35.2 million people who receive Social Security symbolizes the powerful groups that have been able to cushion inflationary shocks with built-in stabilizers: cost-of-living (COLAs) increases for unionized workers and payments indexed to cost-of-living increases for recipients of government benefits. "They [COLAs] ease the pain and suffering," Wharton's Jeffery Green observes, "but they have a negative impact in that they become entrenched and very hard to get rid of." James T. McIntyre, head of the Office of Management and Budget, labels indexed government payments "the real driving force of inflation."

Chase Econometrics chairman Chimerine documents McIntyre's fears. "Indexing Social Security benefits and other government transfer programs accounts for nearly one-third of the federal budget," he notes. "Each 1% rise in the CPI adds about $1.7 billion to the budget. The very sharp increase in these indexed programs is the reason why federal expenditures' share of GNP is rising after having fallen by 2½ points since 1975."

In private industry, 60% of the workers who will be in contract negotiations this year are covered by COLAs: all told, 5.5 million workers have them.

OUTLOOK. While it is generally recognized that the automatic payment increases pegged to the CPI fuel future inflation, neither Congress nor the Administration is likely to take on the powerful lobbies; even so simple a reform as cutting the COLA in civil service retiree and food stamp programs from twice to once a year, a step that would save an estimated $1 billion, draws little support. The guideline-shattering handsome wage settlements in the auto and steel industries, despite layoffs and import threats, suggest that industry, too, is unwilling to tackle the issue.

> **"Our business is up due, I think, to the growing pressures in the workplace. They're giving people a greater need than ever before to get away for a vacation."**

Business Investment

Like productivity, lagging business investment is both a creature of, and a contributor to, inflation. On the one hand, the uncertainty about the future raises the risk of long-term investment. Comments Wharton's Jeffery Green: "When the inflation rate bounces all over the lot, it's more difficult to estimate the profitability of various kinds of investment and the revenues that will be generated."

On the other hand, holding back on needed new, more efficient equipment retards productivity. Alice M. Rivlin, director of the Congressional Budget Office, notes, "Trend growth rates in real business fixed investment [adjusted for inflation] was only 2½% in the 1970s. This was 4½ percentage points slower than in the previous decade.

"Beginning in the mid-1970s, the ratio of capital to hours worked hit a plateau, reflecting both the slower capital growth and the rapid increase in labor hours. This stagnation of capital-to-labor ratio has been a factor in the poor productivity performance in recent years."

Industry's preference for substituting labor for capital may intensify the current recession. A. Gary Shilling, head of his own consulting firm, notes that "businessmen have been adding labor rather than investing in capital because labor can be dispensed with much more easily when worse comes to worst."

OUTLOOK: Washington appears to have finally come around to the realization that various forms of investment incentives are needed to get productivity on an upbeat and defuse inflationary pressures. The recession will put the corrective actions off temporarily. However, as DRI's Lee Phillips cautions: "Government can only create the environment. More important, it will be up to businesses and individuals to follow through."

Transition to Services

While the concept of a services society convokes the image of the good life, it has a high price tag. Indicative of the shift from a manufacturing-oriented economy to a services-oriented one is the fact that white collar workers now represent more than half of the work force. Their share climbed from 43.4% in 1960 to 51.3% in 1979, according to Main, Jackson & Garfield, management consultants.

While this celebrates the triumph of brain over brawn, it feeds inflation from two streams. Susan M. Sterne, head of Economic Analysis Associates, notes that "productivity advances in the labor-intensive services are much harder to achieve than in manufacturing. Also, services have an easier time passing on price increases."

Certainly, the record bears her out. Price increases of services consistently outstrip the CPI—92.6% vs. 86.9% in the 1970s. And productivity, after growing less than 1% a year from 1966 to 1973, declined 0.9% a year between 1973 and 1978.

OUTLOOK: Despite the dismal performance, dramatic improvements loom in the years ahead. Consider these two items: 1. Arthur D. Little's Vincent E. Giuliano figures that 60% of the workforce is involved with information one way or another. 2. Management consultant John Diebold estimates that "less than 15% of the information used in business is automated." Given the tremendous technological advances coming in the symbiotic computer and telecommunications technologies, striking gains will be made in the office environment that has resisted change.

Improvements will occur outside the office, too. Hudson Institute's Irving Leveson cites changes in medical diagnostic and financial services as indicative of the dramatic improvements that will boost services productivity.

Demographics/Lifestyles

The postwar baby boom, which created new market after new market as it moved through the age cycle, became an inflationary stimulant when it reached the job-seeking stage. Between 1970 and 1977, the 16–24-year-old group increased from 21.6% of the labor force to 24.3% while workers in the prime age group, 25–54, showed no change. This was a tremendous influx of unskilled workers, which pushed business costs upwards. Compounding it was the surge in women workers of all ages, who accounted for 60% of total labor force growth in the 1970s. Many of them entered the job market for the first time, and their lack of work experience added to costs.

As consumers, the young adults adopted instant gratification as their spending credo, going in heavily for credit purchases. "Research shows that they viewed credit cards as convenience instruments rather than as debt," says Roger D. Blackwell, senior consulting associate with Management Horizons, Inc. It was the tremendous swing to credit purchases that put off the widely predicted recession last year. Consumer debt rose 50% faster in the 1975–79 period than in the preceding four years.

> **Frankly, we think the whole plan [federal restrictions affecting credit card useage] was concocted after one of Mr. Carter's famous three-martini lunches.**
>
> —McNeely & Co. Retailing Industry Newsletter

OUTLOOK: The maturing of the work force, now that yesterday's newcomers have acquired job skills, will reduce inflationary cost pressures. The 16–24 year olds will slip back to 21.6% of the labor force by 1985 while the prime age group, 25–54, will expand to 65.7%. Furthermore, college-trained entrants, who represent one of five workers today vs. one in eight in 1970, will continue to increase.

However, the huge consumer debt presents thorny problems. Gordon B. Pye, an economist with Irving Trust Co., fears that "the main problem in bringing the recession to an end will be working off the consumer debt and building up real income through a reduction in inflation. It will take time, maybe longer than we expect."

"Mounting job layoffs could provide the trigger mechanism for serious financial disruptions," A. Gary Shilling fears. "In the labor market, those laid off first are likely to be those hired last—the postwar babies, who are in the process of establishing households, and comprise the major purchasers of homes and durables."

Although the recession's rising unemployment and falling buying power will occupy center stage the next several months, it should not divert concern from a multilevel attack on the core inflation problem. If price stability is not restored, the U.S. faces the prospect, as Ian Wilson, General Electric's in-house philosopher, told a recent Assn. of National Advertisers workshop, of becoming locked into a set of "institutionalized responses to living with high inflation on a more or less permanent basis." The 1980s still hold the promise of a significant growth period (S&MM, Marketing in the 1980s, Dec. 10, 1979), but unless inflation is brought under control, growth will be more illusory than real.

Selling with your back to the wall

Marketers striving to protect margins in an inflationary environment are often trapped in a no-win situation. Half of 928 establishments probed by the Univ. of Michigan's Survey Research Center (SRC) said they try to offset inflationary pressures by passing on cost increases more rapidly. Yet, as SRC observes, such defensive actions "may exacerbate the problem so that the degree to which establishments cope may be indicative of future changes in the inflation rate." The survey also revealed that manufacturers are more likely to resort to this strategem, as well as boost prices in anticipation of future cost increases, reflecting the fact that they are "the first link in the production-distribution chain." A surprisingly low one-fifth of establishments try to build up stockpiles as a hedge against rising costs. SRC thinks the share would have been higher but for the high interest rates linked with financing inventories.

Coping with inflation: Best tactics for marketers

Ways in Which Businesses Cope With Inflation	*All Establishments*	*Manufacturers*	*Wholesalers*	*Retailers*	*Size of Establishment* *Small*	*Medium*	*Large*
Inventory Stockpiling	**21%**	**27%**	**26%**	**18%**	**20%**	**24%**	**13%**
Accumulation of:							
Raw materials	11	20	10	8	9	15	9
Finished goods	16	12	23	15	16	17	9
Pricing	**60**	**72**	**58**	**58**	**57**	**71**	**53**
Increasing prices in anticipation of cost increases	30	44	22	30	30	32	29
Passing on cost increases more rapidly	50	59	52	47	46	61	53
Borrowing	**61**	**61**	**45**	**66**	**57**	**72**	**61**
Reducing:							
Short-term	46	49	43	47	44	54	50
Long-term	54	47	45	58	56	50	42
Increasing:							
Short-term	8	6	4	9	5	15	6

The economy's impact on consumers: Cutting back, feeling deprived

Even before prices took off in the first quarter, consumers were retrenching. A poll of 200 adults in January by Ogilvy & Mather's periodic Listening Post survey revealed that a rising proportion of respondents were cutting spending on food, utilities, and gasoline. When prices shot up 18%, annual rate, in the first quarter, almost one-fourth of 1,400 adults polled by Citicorp's monthly survey in March said they could afford "hardly any" of the things they wanted. This was a significant increase over the consistent one-fifth that reported a similar feeling in the three preceding years. Here's what the two surveys reveal:

Inflation-induced lifestyle changes

	1/78	*1/79*	*6/79*	*1/80*
Haven't made any changes	**47%**	**34%**	**32%**	**25%**
Have made some changes	**53**	**66**	**68**	**75**
Sticking to a budget	**22**	**22**	**22**	**24**
Spending less on food	**10**	**20**	**22**	**26**
Using less utilities	**24**	**16**	**16**	**29**
Using less gasoline	**4**	**2**	**10**	**19**
Spending less on clothes	**2**	**3**	**3**	**5**
Spending less on entertainment	**4**	**6**	**2**	**2**

SURVIVAL STRATEGIES

How to cope with inflation (or whatever is out there)

By JACK P. DONIS
Prof. of accounting and finance, Seton Hall Univ.

Extended economic forecast for marketers for the second half of 1980: Stormy weather for the entire U.S. because of past spending excesses and election-year hijinks, all leading to contradictory periods of economic sanity and insanity. Inflation will persist but at a decreasing rate, one, however, that could still be dangerous to the survival of the weak, the young, and the aged. Probable rate of inflation during period: 12%–17% CPI. Small craft warnings from Cape Hatteras to the Great Lakes. Sunbelt area, cloudy.

When a country gets hooked on the euphoria of allowing "a little bit of inflation," there is the danger of becoming addicted. The U.S. has become an inflation addict, and the cure is bound to be painful. Already, the withdrawal symptoms are frightening. The immediate problem is how to cope during the withdrawal, which should take place in the second half of 1980.

This forecast is based primarily on two factors: expectations of continued inflation, and the willingness and ability of its creator to change those expectations. It has been decided as a matter of principle that inflation is bad. And just as the government was the inflation pusher, only the government is in a position to stop it. Stopping inflation effectively calls for such distasteful measures as monetary and credit restraint and balanced budgets. Their objective: lead both business and consumers to believe that there will be no further major price increases for goods and services.

Thus the months ahead should be a period of reduced production, increased unemployment, and uncertain pricing. Just as prices rose at different rates during inflation, they will decline at different rates during deflation: some will continue to rise at a decreasing rate, some will decrease at various rates, and some will remain about where they are now. But "deflation" to a 10% rate is still inflation. It's just a lower rate.

Forecast: There is little probability of a rate of inflation at an annual rate less than 10% CPI for the second half of 1980. But prices of some products will drop sharply.

In the consumer market, the consumer is going to be forced to reexamine necessity spending vs. discretionary spending. *Every day the consumer goes into the marketplace and casts her ballot for "necessity" or "discretionary" expenditures.* Only when all the votes have been counted can we tell which is which.

Examples of "necessity" becoming "discretionary" abound. You probably know individuals who see every musical on Broadway, even when unable to work the cost into an expense account. But with the price of a pair of tickets at $50, and dinner another $60, and a sitter and miscellaneous at $15, the evening in town comes to $125. With college tuition rising 15% this year, it may become a question of keeping the kid in school, or taking him out and keeping up the record of "seeing everything on Broadway." For many, the necessity of theatergoing may become discretionary.

This sort of thing is going on all over the country. There are cutbacks from yesterday's necessities. Retailers are finding that demand for a new spring wardrobe is not the necessity it was last year, except for the very rich. The biannual new car is stretching to three years or even six.

There is one clearcut discretionary expenditure that is still classified as a necessity, however—Americans this year continue to feel the urge to travel abroad on vacations. (Early in April, I couldn't even get space in the hotel of my choice in Palermo, Sicily, for mid-June!) The consumer has cast the ballot. Foreign travel is a necessity for now. As one can see, the consumer is unpredictable.

The challenge to the marketing executive is to know what that selection is going to be. The definition will vary from section to section of the country. Even though there is concern about recession, the indicators are that the Sunbelt states don't think it applies to them. Despite this belief, if there is a recession it will probably throw shadows over the Sunbelt, even Texas. On the other hand, in the northern manufacturing states, which have automotive and heavy industries that are slowing down, there can be a stormy pricing and demand situation.

Selling at list price may become as nebulous as in the automotive industry. As demand falls, there is going to be a drop in production with resultant excess capacity and high fixed costs,

In addition to his academic responsibilities, Jack P. Donis does management consulting and is affiliated with the Greenhouse Group, New York City, management consultants.

which will vary by industry. When that happens there can be a straightforward markdown of prices to reflect the lack of demand, or companies can play the Detroit game of holding list prices but giving big discounts and manufacturers' rebates.

During the transition, marketers better rethink their working relationships with their fellow production and financial executives. As a financial man thoroughly corrupted (enlightened) by marketers, I am aware of all the methods of costing and the impact of that costing is valid, but in the short run, full-absorption costing may be counterproductive. If the financial executives aren't aware of this, you have serious problems.

With fixed costs surrounding a company, only variable costs become relevant in the short run. If the alternative to low profit is loss, there is no choice. The free market system, if it is to survive, is based on flexible pricing.

Love that inflation

Can business executives cope with our made-in-America brand of inflation? Some can, and they will prosper. Others can't, and they will suffer. Some businesses are proudcers of goods and services which have relatively inelastic demand. When prices of the goods they buy increase, they pass the increase through to their customers at the regular markup—plus "a little extra for inflation."

The dollar increase is very interesting. Take a producer who uses a 50% markup on his cost of $100. If his costs rise by 25% due to inflation, his product-cost becomes $125. Now, compare the dollar contribution on the sales of one unit:

	Before Inflation	*After Inflation*
Selling price (50% markup on cost)	$150.00	$187.50
Cost	100.00	125.00
Profit contribution	$ 50.00	$ 62.50

Note that the producer has covered the inflationary cost increase and raised his profit contribution by $12.50 or 25%. If the demand is there, however, and consumers are convinced that prices will be even higher next month, the logical pricing strategy is to round out the price to $200. Using the same cost base of $125, this results in a profit contribution of $75, a 50% jump from the preinflation figure. That is why many businessmen don't despise the "ravages" of inflation nearly as much as they let on.

> **Inflation isn't affecting us as much as the pseudo remedies that the government is imposing, such as the credit squeeze. That's our biggest hurt.**
> —John Leopold
> National sales manager
> Mariner Outboards, Brunswick Corp.

The Chrysler syndrome (increasing prices while increasing rebates and allowances) can be the demise of honest pricing. When the squeeze comes, marketers must discuss variable cost pricing with their financial executives. And the production executives have to "give," too. The fixed production costs can often become variable if it is a matter of survival—to have the ability to fight and produce a profit another day. To a degree, there is no such thing as a fixed cost in the long run. Only managed costs.

In the industrial goods market, the national price-volume slowdown for consumer goods will change the expectations in the manufacturing sector. The market for machinery and equipment will be examined more closely in terms of an ROI, cash flow analysis, and so forth. Price alone does not determine the demand for producers' goods. The expectation of profit improvement is the governing factor, and as long as funds are available, no interest rate is out of line as long as the expected benefits exceed that cost by a "reasonable" margin. High interest rates are just higher costs that act as hurdles on the drive to winning the profit race. When the expectations of increased demand and increased profit by the manufacturing sector turn down, then the producers' goods market will have its recession or depression.

One segment of the producers' goods market should remain and becomes especially important: the cost-effective replacement market. It is difficult for many financial executives to accept, but once they buy a machine it is a sunk cost and not relevant in itself when there is an opportunity to replace it with a more cost-efficient piece of equipment. When business is good, price can cover inefficient investment. When business is bad and that shelter is gone, the only path to high profitability is increased efficiency (lower costs). *There is always a market for an industrial product if it offers both effectiveness and efficiency.*

When they are selling their equipment, marketers of capital equipment can cite dozens of examples using cost-benefit analyses to prove now is always replacement time. As long as there is continuing production and funds are available, it is logical for a customer to make the investment and become more efficient (lower operating costs and increase profit). A simple case: Invest $100,000 to automate scales and save the payroll cost of three men, each at $16,000 per year. The arithmetic easily shows the desirability of the investment to the customer regardless of the criterion for investment.

The unwillingness to recognize this is one of the factors that has led to the serious situation in the steel industry.

Forecast: Stormy conditions as the industrial goods market is buffeted by decreasing consumer demand and price readjustments; safe harbor for those who have cost-effective products and know how to merchandise them.

What about 1981 and later? Heaven only knows—none of the sophisticated macroeconomic models are working. We hope that the corporate models are still effective. Will we ever return to the halcyon 4%–5% CPI days? That is a $1 billion question. This is an election year. Anything can happen. Anything.

The helter skelter impact of inflation

The impact of price inflation has been irregular during the past year and the past 10 years. An inspection of just a few price changes published by the Bureau of Labor Statistics shows this clearly.

Consumer Price Index (CPI)

Item	*1978–79*	*1969–79*
Fuel oil	63.5%	357.8%
Coffee	12.8	330.2
Hospital room	11.3	192.2
CONSUMER PRICE INDEX	12.1	103.5
New car	8.2	59.1
Whiskey	5.0	25.9
TV set	1.0	3.3

Producers Price Index (PPI)

Natural gas	39.0%	542.8%
Coal	2.3	302.1
Industrial chemicals	23.2	178.1
PRODUCERS PRICE INDEX	13.8	126.9
Heating equipment	8.7	81.5
Wire cable	22.4	75.3
Floor covering	5.5	49.7

CONVERSATIONS WITH CONSUMERS

The Templeton tapes

By DR. JANE TEMPLETON
Contributing Editor

A woman in a Denver focus group is talking: "I used to think that one evening a month on finances—the bank statement, writing the checks—was a lot. We never had what you could call a budget. Now it's about half of what we talk about, and I think about money—or *worry* about it—almost every day, especially in the low part of the afternoon."

In San Francisco, a panelist says: "I don't sleep right most nights. You know, I've never thought of myself as a materialistic person. But I guess I am, because everything else is going pretty well. When inflation first got to be a problem for us, it was just kind of annoying. Then it got to where I took a part-time job, which I don't mind doing. But that was just like a *straw*. Going to the grocery store scares me. Buying a pair of shoes scares me. For the first time, I get the feeling we're not going to make it. There won't be enough for us to live on. I wake up at night, and think I'm drowning."

In Chicago, a woman on a panel on network news viewing says: "I can watch the news, and I get what they're saying, until they have a section on the economy. Then I don't know what happens; I can be looking right at the set, and I don't hear anything."

Panels on banks and banking especially provide hints about how the public's anger, anxiety, and despair over inflation may be expressed in behavior. Starting about a year ago, men and women panelists alike reported that family bookkeeping—once typically a wifely chore—had shifted (or had shifted *back*) to the husband's domain.

A male panelist notes, "It's not that she *can't*, or that I don't trust her. But I need to be in closer touch, and to feel I'm controlling the outflow personally." A female panelist who lost control of the checkbook to her mate says, "It makes me mad. When it wasn't so important, and we didn't worry about it really, he could care less. I was good enough to write the checks and balance the statements. Now that it really matters, the lord and master can be bothered with it. And suddenly, I can't handle it."

Indeed, deciding where to bank is now based on new sets of priorities. Convenience and relatively "cosmetic" concerns like bank layout, premiums, and catchy "image" used to be high on the list of considerations. Now, these have nearly disappeared, and banking customers can be divided into two groups.

There is the *anxious* group that looks for reassurance ("I don't suppose it is real, but I have the feeling that the —— is like my family. I know Ted, who is the person I always go to with problems. He is optimistic and calm, and I feel better.").

And there is the *bullet-biters* group that works off its anxiety by marshalling and pondering hard numbers ("You just have to keep your eyes and ears open. There is always one bank that offers you a quarter of a percent more, or some way around the high interest percentages.").

Panels show that comparison shopping is definitely "in," across the board, from banks to beans, from cold remedies to Cadillacs. It takes several forms:

- **Expansion of brand-loyalty.** One panelist declares, "I used to use just —— mixes, but now I think of either —— or ——, depending on which is on sale."
- **Brand switching.** "The ones I used to swear by—I thought I could really tell the difference," a Chicago panelist notes. "But pennies count now, and so I look at the whole shelf, and I read the ingredients. I don't really *understand*, but I can tell if it's exactly the same. So now I use this cheaper brand, and honestly, it works just as well."
- **Stocking up.** "We have a cellar. So now my purse is full of coupons, and I read those newspaper bargain announcements. When I find something we use for sale at ten cents or fifteen cents below the regular price, I fill up my cart."
- **Recognizing the company** as a "corporate citizen." Another Chicago panelist says, "You know, you get really *mad* at the way prices go up, and then you read the next day in the newspaper that the same company that charges 40% more for its product claims that it can't clean up the river its plant drains

---

Dr. Jane Templeton, a psychologist, is a specialist in human motivation. She directs Choice Points, a New York City marketing research firm.

into because of the expense." A copanelist adds, "I won't buy the unlabelled stuff, so if I am going to pay for the name, I'll make it count. —— is very civic-minded. They support consumerism, and they are honest in their advertising, and they have been around since I was little. It seems like a concerned, caring company."

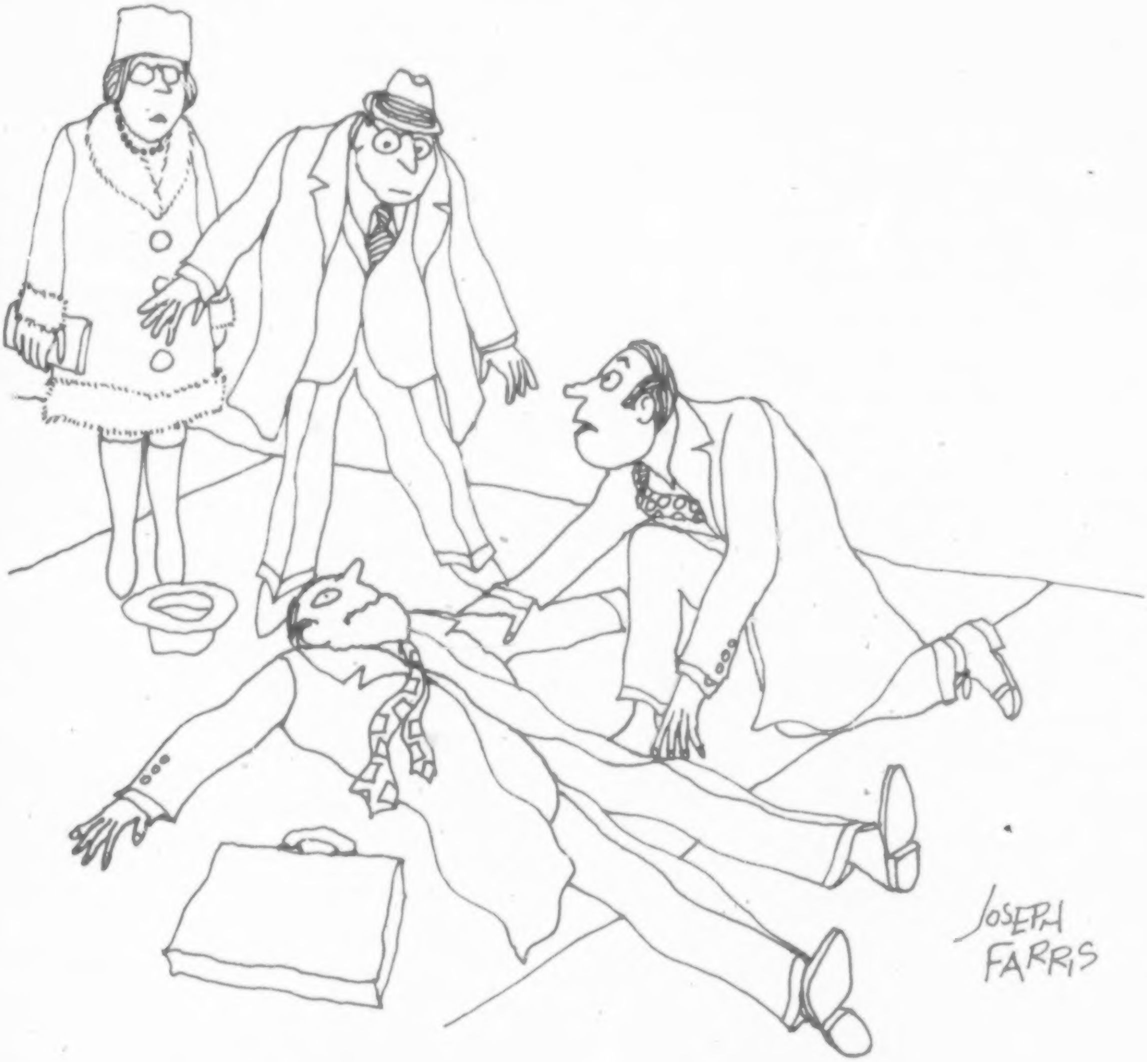
Of course, there are a few products which are especially close to the consumers' hearts and for these they will make concessions. A Denver panelist says, "I depend on —— cream. Maybe it's my imagination, but I think it makes me look better. I'll economize on floor-wax and paper towels, and cook my own vegetables, so I won't feel so guilty about buying it."

Another Denver panelist says, "We're doing okay, but even *we* have made a lot of sacrifices. We don't eat out, and we have a lot of spaghetti. But I look forward to getting home, to that first fifteen minutes, when I sit down and have a drink with my wife. I want to keep that. So I always drink ——, even though it costs quite a bit more."

Conclusion: consumers are finding out more about what makes them buy—or bypass—products they used to choose almost automatically.* They're uncomfortable and wary. They don't like having to compare prices and weigh purchases.

A panelist sums it up: "I used to plan my week with my astrologist, or at least from my horoscope in the paper. Now I check the store sales and consult my accountant."

**This new awareness, I might add, also makes them easier to interview.*



"He says it's nothing in particular and everything in general."

PRICING STRATEGIES

The panic of the 1980s: It's pricing

By DR. ROBERT J. DOLAN
Ass't. prof. of management science
Univ. of Chicago

Inflation is greatly increasing the cost of errors in pricing products. Mistakes, which several years ago may have been masked by the overall profitability of the company, may now be fatal. This has brought forth some good advice about adjustments in pricing policies for an inflationary period (such as review your prices more often to cut the lag between cost increases and price adjustment). It has also brought forth some bad advice (notably be sure escalation clauses apply to 100% of the price.)

But inflation will not change the basic facts of business life and good management, especially this one: a sound marketing program still begins with an analysis of the customers' needs. Thus rewriting your pricing rules solely on cost considerations is dead wrong and highly dangerous because it is "antimarketing." How then to set prices in times such as these? Here is my advice.

Basic Principle No. 1: *Value Pricing*

Simply stated this principle is: no matter what happens to the seller's cost, the buyer is not going to pay more for a product than the value he places on it. Thus, no matter how compelling the seller's cost justification for a 10% increase in the selling price of $10, the profit derived from serving an account valuing the item at $10.50 will be zero because the customer simply will not buy anything. His valuation of the goods is the maximum price which can be charged and still have an exchange take place.

This principle is simple and difficult to dispute. Evidently, it is also easy to forget because the most often heard advice about pricing in an inflationary economy is to pass all cost increases through the channel as quickly as possible. It's nice if you can do it without adversely affecting your sales rate. So it's nice but unlikely.

Basic Principle No. 2: *Competitive Pricing*

Most products have substitutes. If substitutes exist, the price charged by the competition necessarily affects your permissible price changes. The competition may or may not change price in response to your change. The competition may or may not be experiencing the same cost pressure. Competitive and market reaction to your price are matters for *analysis*, not assumption.

Actually, principles 1 and 2 apply in any kind of economy. They mean you have to understand the economics of the market and that a pricing policy based solely on costs is wrong. Yet the current inflationary period is vaulting cost into the spotlight, with scant attention paid to other factors. Costs do play a crucial role in pricing—just as the value the customer places on the goods is the upper limit at which a transaction may take place, the direct cost is the lower limit.

Over 50 years ago, the president of General Motors provided a helpful analogy: "Pricing is like a tripod. It has three legs. In addition to cost, there are the other two legs of market demand and competition. It is no more possible to say that one or another of these factors determines price than to assert that one leg rather than either of the other two supports a tripod." We now want to discuss ways to deal with cost escalation, and it is helpful to keep the tripod idea in mind.

Cost escalation does not invalidate the principles, but it does require a strategic response by you. For starters, we must recognize that studies of historical cost are no longer useful. Firms using historical or current cost as an input to the pricing of goods for future delivery will find their true profit margin less than anticipated.

The relevant cost figure is achieved by estimating how much it will cost to replace the goods in inventory at the time of shipment. Thus, if a formal system for cost estimation is not in place, set one up.

The details of a cost forecasting system cannot be given here—situations will be different. Possible inputs include established and potential supplier estimates, trade magazines, government publications, and consultants. A good forecasting system is not necessarily cheap, but most cost increases are predictable and the expense is justified by the ability to make timely price adjustments and better purchasing decisions.

If the cost forecasts were perfect, there wouldn't be much more to the story. But even the best forecasts involve some error and thus quoting prices for future delivery involves uncertainty

---

Prof. Dolan specializes in developing pricing strategies; among his clients is AT&T. At present he is also designing a research program to determine the market potential for energy recovery systems for the Dept. of Energy.

and risk. For example, if a firm is to deliver goods 12 months from now, following our "anticipatory pricing" strategy, the relevant cost would be the cost of replacing the good in inventory at that time. If you quote a fixed price assuming a 10% increase in costs, you run the risk of the actual cost increase being, say, 20%.

How can you cope with this risk? The answer from those who have forgotten marketing principles is to shift all the risk to the buyer, through, for example, a price-in-effect at time of shipment clause. This is just like the advice to pass all cost increases through the channel immediately—it's nice if you can do it without adversely affecting sales, but it is unlikely you can do it.

Basic Principle No. 3: *Customer Focus*

Profitability comes through satisfying the wants of the customer. Want satisfaction is accomplished not only through the "generic product" supplied, but also through all associated materials, the "augmented product."

Some customers (usually small with little capital) cannot bear the risk of PETS (price in effect at time of shipment) contracts. To shift all the risk to them means "no sale." The risk is inevitable in inflation and must be borne by buyer or seller, or shared by both. The relative ability of the two parties to shoulder the burden and competitive conditions will determine which of these options is best:

1. fixed price quoted at time of agreement;
2. escalation clauses/surcharges;
3. renegotiation with extreme changes in conditions; or
4. price in effect at time of shipment.

In a fixed price contract, the risk is borne by the seller. Expected cost escalation must be explicitly included in the price determination. Unrealistic estimates of cost escalation to minimize risk will result in the quote of a fixed price which is out of line with the competition. While this plan has long been the standard, inflation is prompting the adoption of "flexible plans" such as 2, 3, and 4.

With escalation clauses or surcharges, the price of the goods is pegged to the actual cost increases or decreases which occur. If a published price index does correlate highly with production cost, the index should be used as a basis for the increase. A Fall 1978 survey in the *Journal of Purchasing and Materials Management* showed that 39% of the purchasing agents accepted clauses with escalators. Only a small percentage, 20%, saw escalators as being potentially beneficial to the buyer, however.

What to do when the buyer panics

In a recent issue of *Agency Sales*, salespeople were given advice on "counteracting" buyers who try to foil a newly raised price. One buyer tactic, the magazine notes, is to remind the salesperson that the buyer's company "is a valuable one to do business with," one the salesperson "would hate to lose."

The magazine's recommendation on what to do in such a situation: "Merchandise *yourself* in the same way, as a valuable resource to customers, one they shouldn't be without as prices continue to rise everywhere. Though you cannot personally keep prices down, you can help offset them with your expertise, your knowledge of the industry and their business, and your sharp head for dollars and sense. Buyers expect that from today's sales professionals."

In reality, escalators can be beneficial to buyers since by sharing the risk with the seller, the actual escalated delivery price may well be lower than the fixed price which the seller would have quoted if demanded.

A second way to share the risk is to renegotiate with extreme changes in conditions. Half the purchasing agents in the survey accepted this type of contract and felt it a reasonable mechanism because it requires "just cause and hard facts" to be presented.

Naturally, since price-in-effect at time of shipment places all the risk on the buyer, purchasing agents were not favorably disposed to these contracts. Nonetheless, 65% of the purchasing agents in the survey had at one time or another accepted such a contract.

The point is this: inflation has injected significant risks into transactions. There are alternatives to fixed price contracts which deal with this risk in a different way. The decision on which plan is best for you must start with a recognition of the needs of your customers. The payment terms to be included as part of your augment product offering can then be determined.

There are no cookbook answers to pricing in inflation. There are many bad suggestions being made these days. The root of most of these bad suggestions is blindness to the customer and competitive factors, caused by myopic preoccupation with cost. Successful pricing practices will come from:

- remembering the basic principles of sound marketing management;

- developing an effective cost forecasting system; and
- using "anticipatory pricing"—that is, using the expected cost at time of shipment as input to fixed price quotes or building in escalators.

Recently, the head of price monitoring for the Council on Wage and Price Stability commented to *Business Week* that companies adopting the type of procedures suggested here are "one of the things causing the current inflation." On the contrary, Milton Friedman convincingly argues that escalator clauses and the like may help bring inflation under control provided the money supply is stabilized.

Regardless, protect your profit margins to the maximum extent possible. We all hope that protection can come through increased productivity and cost-reduction programs. However, as Walter Fackler, a noted economic forecaster, says: "No amount of exhortation by presidents and other government officials will change the cruel economic facts of life. You simply cannot give away your company because we have no long-run, rational strategy for bringing down the rate of inflation."

That makes eminent pricing sense to me. S&MM

The real cause of inflation is government spending—and all the money that's being printed. You can't continue deficit spending, all those expensive programs, and pay for it all just by printing more money. Not if you want money to keep its value.

Advertising in a recession

The perennial teaser, Does it pay to advertise in a recession (when, presumably, your competition is retrenching), gets a mixed answer in a new report from McGraw-Hill's Laboratory of Advertising Performance. While McGraw-Hill says its analysis affirms that companies that did not cut advertising in the last recession made out better than those that did, the report's industry detail suggests caveats to the assertion. Overall, McGraw-Hill says, companies that didn't cut advertising increased their sales 132% between 1973 and 1978 while those that did had a 79% gain. However, in at least five industries—transportation equipment, instruments, food, paper, and rubber—the "pinchpennies" fared better than the spenders.

Industry	*Cut Advertising*	*Did Not Cut Advertising*
Durables	**+ 83%**	**+163%**
Lumber & wood	48	78
Furniture	25	49
Stone, clay & glass	55	122
Primary metals	84	108
Fabricated metals	56	95
Nonelectrical machinery	104	297
Electrical equipment	69	135
Transportation equipment	102	81
Instruments	165	152
Miscellaneous	69	91
Nondurables	**75%**	**96%**
Food	93	86
Tobacco	73	115
Apparel	45	63
Paper	98	97
Printing & publishing	87	92
Chemicals	60	115
Petroleum	127	155
Rubber	98	77
Leather	51	69

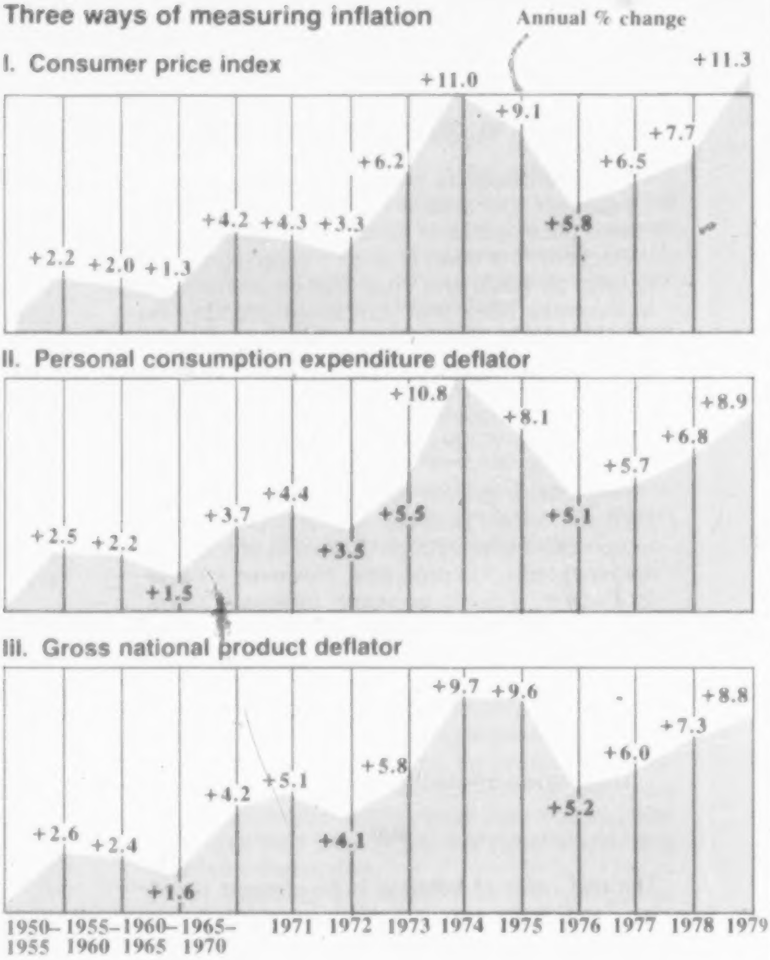
Three ways of measuring inflation



Note: The monthly consumer price index (CPI), prepared by Bureau of Labor Statistics, is based on a fixed set of goods and services. It uses 1967 as the base period. The quarterly personal consumption expenditure (PCE) deflator, by Bureau of Economic Analysis (BEA), reflects consumer shifts in preferences among various goods and services. It uses a 1972 base. The quarterly gross national product (GNP) deflator, also by BEA, reflects price changes throughout the entire economy; it uses a 1972 base.

The "core inflation rate"

In a special analysis for Congress's Joint Economic Committee (JEC), Data Resources President Otto Eckstein notes ". . . Since 1964, the core inflation rate has deteriorated steadily, even in years when the Consumer Price Index (CPI) showed dramatic improvement."

Briefly, the core inflation rate is the trend rates of two components: unit labor costs, which influence productivity performance, and the cost of the capital business uses to invest in new plant and equipment. The shock rate usually reflects abrupt changes in food and energy prices. The demand rate is related to the share of capacity industry uses to produce its output as well as the unemployment rate. Of the three types, the core rate has shown the most dramatic persistency to increase at a faster rate.

What's the future outlook for the core rate? "Not good," says Dr. Eckstein. "With productivity lagging and wages likely to accelerate in response to 1979's double-digit inflation," he reasons, "unit labor costs will be advancing very rapidly. Capital costs also will continue high."

Selling with your back to the wall

SALES FORCE MANAGEMENT

In times like these, unlock your key accounts

By THOMAS A. WHITTY
Sales training consultant

Improving penetration of major accounts is one means of achieving stable growth in today's uncertain economy. But competition is fierce because everyone would like more key-account business. To improve your results, try building one or more of the following tactics into your key-account penetration strategy.

Manage effort rather than time

A good time and territory management system will ensure that your salespeople or reps spend enough time with major accounts. But first-line managers should also exercise control over the quality of the call.

Have them and their salespeople draw up a written development plan for every important account. Then make sure that your field managers monitor results. For example, if the plan calls for the prospect's marketing department to test your product in the field, the field sales manager should monitor whether the prospect is being contacted; whether its marketers are taking the necessary steps to set up the test; whether the test is well-designed, and so on.

Preparing written account-development plans is not a complicated job. Nor should it unleash a new wave of paperwork. All that's needed is identification of key customers and some of the steps your salesperson will take to influence them.

Focus management effort on fewer calls

Most salespeople are conscientious and make the hundred or more calls you expect each month. However, nearly all key-account development occurs on 15–20 of those calls. Make sure that your salespeople put their best into those calls by letting them know that management is following their progress.

When you or your field managers plan field visits, check with the salesperson or rep in advance to be sure that some important accounts are included in the itinerary. Pay special attention to those in which progress is slow. Also, if you normally receive call reports (especially of the free-form, creative-writing type), teach salespeople to highlight key-account activities. After each visit, the report should tell you where the salesperson stands now vs. plan, and what progress he is making toward the next goal. Such reports needn't be lengthy. For example, one might read, "I finally got in to see Adam Geffert, the engineer who specifies XYZ's bumper materials. He's agreed to take two pounds of our material and test it."

Reduce sales call content

Presenting one good idea, well-romanced, is often the best approach for a major-account call. The salesperson has to call repeatedly on the same prospects at a major account. If he unloads all his ideas on the first call, repeat visits become "here-I-am-again" calls. If, on the other hand, he builds a reputation for coming in with a significant piece of information each time he visits, his calls will be welcomed. Only then is he on the way to account penetration.

Management can provide direction regarding call content during coaching visits and discussions of major-account plans. Also, don't overlook the influence of your sales literature. If the salesperson's only brochure lists every product you make and every customer benefit, it encourages a shotgun blast sales call. To encourage a rifle approach, produce sales tools that highlight one important point. Remember, the prospect, like you, is looking for ways to deal with the economy. He's bombarded with information. If your salesperson presents one good idea, it's less likely to get lost in the flood.

Go for the top line

No doubt you're under increased pressure to improve the bottom line, profits. But it's usually easier to direct and motivate salespeople toward the top line, volume. The goals are not incompatible. It's quite practical to set top-line goals in such a way that their achievement ensures bottom line profits, especially when you're setting goals for major accounts, which generally offer the best profit opportunities. And once you tie the salesperson's goals to your profit goals, you can push sales.

Beef up account records

Don't settle for the skimpy data on major accounts that fits the bill for most customer records. Lack of information is often the biggest obstacle to major-account development.

In major accounts, decision-makers and

Thomas Whitty is a consultant based in Westfield, N.J. He specializes in sales and sales-management training.

buying influences come from a variety of disciplines. It is not only difficult to sell all of them, it is sometimes hard to find out who they are. Thus, the salesperson should build a bank of information to help him penetrate such accounts. It should include such information as:

- who is involved in the purchase decision
- how the decision is made
- what the prospect's long- and short-term production and marketing plans are
- what problems exist
- significant personnel changes
- changes in the prospect's decision-making processes.

That kind of information will take time to uncover and accumulate. It is not going to be gathered on one call or even five. But on every call, the salesperson should seek out new bits of information.

Encourage him to take notes during the sales call. Many salespeople are reluctant to do so, but it is the mark of the professional to hear accurately and use the information gathered. Interestingly, some customers are more outgoing and talkative

O.ZIA FARH 79

© Copyright, Sales & Marketing Management

if they see that the salesperson is so interested that he is writing down the facts they offer. Such notes are the best way to ensure that an account profile is updated correctly and fully.

Sell in breadth

Naturally, the salesperson should call on different headquarters departments such as purchasing, production, marketing, finance, and so on. He is also smart to know more than just the top executive in each department because others do have influence and promotions do occur. But major accounts generally are spread out in other ways: They have a number of plants; they have field organizations for sales and service; and they have many customers. At times, contact with this broader organization can be an aid to account development.

A salesperson can make a case for visiting locations other than the prospect's headquarters (and thus influencing other levels of decision-makers) by offering to train; to serve as a skilled observer of applications; to help keep communications open; to gather specialized information; or to help solve a problem.

Reexamine sales force compensation

It's likely that your current compensation plan doesn't reward a salesperson who helps on an account that is someone else's responsibility. Find a way to give some credit to all those who help to make your company's presence felt by an important account or who gather and report information from around the country that will help sell the account at the decision-making point.

None of the above ideas is going to work instantly. But the need for major accounts is constant and even when our current economic problems vanish, you'll come out ahead if you increase you major-account penetration.

The mood is meaner

Replies of 200 wholesaler and distributor firms to a survey by Thomas G. Gies, professor of finance, Univ. of Michigan, suggests that inflation/recession worries are prompting the firms to take a harder line when problems with customers crop up. Here are highlights of the survey (its complete findings will be published in August by the National Assn. of Wholesaler–Distributors).

What action do you take when:

1. Customers object to price increases and threaten to buy from some other source?	*Action taken when inflation was 3–5%*	*Action taken now*
Lower the prices	**30%**	**7%**
Maintain the new prices	**30**	**60**
Maintain them but "sweeten" the deal	**30**	**20**

2. A credit search on a prospective customer shows that the account tends to pay slowly?	*Action taken when inflation was 3–5%*	*Action taken now*
Deny credit but accept business on a cash basis	**20%**	**22%**
Limit credit severely	**30**	**45**
Offer credit within normal limits	**50**	**30**

3. You've reduced your inventories and are losing some business as a result of out-of-stocks?	*Action taken when inflation was 3–5%*	*Action taken now*
Ignore the lost sales	**25%**	**30%**
Increase all inventory levels	**20**	**15**
Selectively increase inventory levels until an acceptable level of lost sales is reached	**30**	**35**
Selectively increase inventory until no sales are lost	**25**	**15**

4. You have an opportunity to take on a new product line, one that could double your sales in five years, but it will necessitate leasing new warehouse facilities?	*Action taken when inflation was 3–5%*	*Action taken now*
Agree to take it on because growth means success	**50%**	**20%**
Agree to take it on because it involves no debt financing	**25**	**25**
Agree but cut some less profitable items	**10**	**30**
Don't take it on	**10**	**20**

FLEET CARS

Putting a brake on runaway costs

By ROBERT H. KASTENGREN
Transportation Div., Runzheimer & Co.

"Defensive driving" suddenly means something other than how to avoid the other auto; namely, how to keep your fleet costs from driving you crazy. Dealing with dizzily rising costs has become the new national way of life, but nowhere is the challenge greater than in keeping your sales force mobile. Runzheimer & Co.'s latest annual report on what it costs to own and operate a new car shows that expenses increased between 13% and 17% in the 12 months between January 1979, and January 1980; indeed, the average rise for all size categories was 15%. The biggest chunk of the increase is, of course, due to gasoline, whose average cost was up 55%.

How can sales managers ensure that their salespeople keep mobile without draining company profits? Here are some practical and tested ways:

Downsize as soon as practicable—but certainly no later than the start of the 1982 model year. Going from a full-size, 8-cylinder car to a compact 6 yields a savings of 21.5% per year. Downsizing from a compact 6 to a subcompact 4 reduces annual costs another 7%.

Keep cars properly maintained. The Runzheimer Transportation Div. advises that automobiles needing adjustments and repair waste up to two gallons of gas in every tankful.

Institute contests among drivers for best fuel economy. Arm them with fuel-saving driving tips. Invite them to submit their own conservation ideas. Suggest to drivers that very significant gasoline savings can be had by:

1. Driving at a steady speed. Varying mph by only 5 can reduce mpg up to 1.3.

2. Driving slower when bucking headwinds. U.S. Dept. of Transportation studies show that identical test cars driving identical speeds get 16.5% better mileage in zero wind than they get in an 18 mph headwind.

3. Driving with windows closed whenever possible. Open windows increase the coefficient of drag and can lower mileage by as much as 10%.

4. Turning the engine off when the car must idle for longer than 60 seconds. The average engine uses about 1 gallon of fuel for every 1½ hours of idling.

5. Avoiding lane-jumping. Side-to-side movement can cost 1 to 2 mpg at highway speeds.

Reduce the size of your fleet. Eliminate as many field sales and service cars as possible by tightening eligibility requirements for the assignment of business cars. Marginal executive and nonexecutive recipients can be sifted out through a redefinition of vehicle assignment by job description, minimum mileage, or time usage.

Tailor auto reimbursements to reflect each driver's home city and travel territory, paying a fixed dollar allowance for static expenses (insurance, license, depreciation, taxes, and interest) and a variable cents-per-mile rate for running costs (gas, oil, maintenance, and tires).

Consolidate sales territories. Consider using manufacturers' agents in marginal territories

Robert H. Kastengren is the executive vice president of Runzheimer & Co.'s Transportation Div., which specializes in reporting on fleet expenses and strategies to reduce them.

Source: Runzheimer and Co., Transportation Division

where sales or service requirements do not justify miles traveled.

Improve your telemarketing program. Sell and service more by telephone. Avoid on-premises sales and service calls wherever possible. Consider switching the responsibility for filling reorders of products and services from marketing to service. Then provide a level of service desired by the customer adjusted to a graduated fee scale. Install cost efficient, computer-driven telephone systems to maximize the process while monitoring the reorder needs of the client through ongoing computer-to-computer analyses.

In another area of business travel, the Runzheimer & Co. Living Cost Div. reports that the national average per diem costs for lodging and meals have increased 11% from January 1979, to January 1980. Living Cost Div. executive vice president Gaylord F. Milbrandt recommends the following to hold down on-the-road expenses:

1. Establish realistic policy guidelines for lodging and meal expenses based on factual data.

2. Make use of commercial discounts wherever possible.

3. Maximize the number of calls made on each trip. It has been shown that improved preparation before trips allows sales and service people to visit, in one day, the customers and prospects that they used to call on in two days.

4. Monitor expense reports by using an independent, unbiased guide such as the Runzheimer Meal-Lodging Cost Index.

Rampant inflation and continuing energy crises are changing the entire nature of sales and service as we have known it for the last 35 years. In travel, history will no longer provide clues for the future. It's a brand-new challenge.

Hold that largess

Are companies overreacting to the cost of gasoline? Judith A. Dettinger, field consultant for Runzheimer's Transportation Div., believes many are. Quoted in S&MM's Aug. 20, 1979, issue she noted, "After a chorus of complaints from salespeople, many have boosted their reimbursements to them." Such over-reimbursement is especially likely to happen, she says, when companies repay at a fixed rate per mile, without taking actual operating costs (gasoline and maintenance, for example), fixed costs (registration or tax fees), and territorial factors into consideration. "A car getting 15 miles per gallon requires a 15¢ increase in the price of gasoline before running costs for that car rise 1¢ a mile," Dettinger notes.

> **"My sales force has voluntarily adopted a cost-conscious approach to business. For example, I just had a salesman call me up to tell me about a study he'd done himself on how to travel economically. I think that the sales force compensation formula—the-more-you-produce-the-more-you-earn—should be applied in other areas. Meanwhile, at 3M, executives now travel at coach rate."**

Cranking out inflation

Almost all inflation today begins with heavy government borrowing. This is because the government is the most credit-worthy of borrowers, as well as the most powerful. Its bonded obligations provide the necessary reserves which expand the money supply. Government involvement also assures that the necessary political support exists to proceed with credit expansion.

The newly created money is first spent by the persons who hold transcendental–capital claims: government employees, welfare recipients, and politically favored interests which depend upon the government to purchase their unsold products. Because they get the newly created money first, they get to spend it before prices have risen.

Eventually, the newly created money dribbles through the system to the point where nearly everyone is enjoying some increased increment of cash. Prices, by this time, may have begun to rise, but no one is quite sure how high they will go. It is at this point that the effects of inflation in creating misinformation through the price system generate actions which otherwise would not have taken place.

—Excerpted from *The Squeeze*, by James Dale Davidson, published by Summit Books.

CONFESSIONS OF A PENSIONER

Living the good life, thanks to the CPI

In its Jan. 31 issue, Business Week published a letter written by William D. Howard, a former accountant (now retired) in the IRS–Intelligence Div. of the Treasury Dept., to Mrs. Janet Norwood, Commissioner of Labor Statistics. In his letter, Howard took Norwood to task for a speech she had just made defending the Bureau of Labor Statistics' Consumer Price Index, which is widely used to adjust wages and pensions for cost-of-living increases. S&MM here reprints portions of Howard's letter because we consider it to be a rare and dramatic indictment of the CPI as one of the major contributors to inflation. We think readers will agree with us.

Dear Mrs. Norwood:

According to the Jan. 22, 1980, issue of *The Wall Street Journal*, you spoke to the National Association of Government Labor Officials and defended the BLS consumer price index against claims that it exaggerates the inflation rate . . . I submit to you that an honest analysis of my own personal financial status reveals more about the impact of the BLS's actions than can be derived from opinions of economists.

Let's start with my 43rd birthday, July 1, 1968, when as a middle-management federal accountant, Grade 15, Step 8, I was earning $22,695. Federal workers then became subject to the "Comparability Pay" law. My salary would have changed little had the "average" pay of the private sector surveyed been used, but it wasn't. The BLS used special weighting curves and other refinements they felt necessary to achieve "comparability," and instead of my pay increasing 22% in the next 4½ years, it spurted 54% to $34,971 by January, 1973, without any promotions. It would be $50,112 a year today if I had not retired on my 50th birthday, July 1, 1975.

During the 4½ years since my retirement from federal employment, my Civil Service annuity (#1 810 115), which started at $1,922 a month, will reach $3,073 based on the CPI-W [the index that applies to wage earners and clerical workers] of 230.0 at December, 1979. Thus, I now receive 63% more retired than I did working in mid-1968, primarily due to the impact of the BLS's determination of "comparability pay" and calculation of CPI-based cost-of-living allowances.

In your speech, which I referred to at the outset, you stated:

"We have one official consumer price index, and we will continue to have one official consumer price index."

"The CPI is the best measure of purchasing power we have."

"The purpose of CPI cost-of-living adjustment has been to permit people to purchase in today's prices the bundle of goods and services they purchased in the base period, thereby leaving them at least as well off as they were then."

This means that I do not have to switch to pork, chicken, or even pasta, as others do, because the cost of beef and veal has gone up more in the last eight years than meat substitutes. I am entitled, according to you, to eat the same quantity and quality of beef and veal as I did in 1972-73, when it was cheap.

I still get to drive gas-guzzling big cars at 6 to 8 mi. a gal., just like people did when the CPI was "based" and gasoline cost 41¢ instead of the $1.20 now.

My radial tires for my cars get 40,000 mi. these days, but my cost-of-living allowances based on the CPI assume that I still get only 15,000 because quality improvements (except for new automobiles) are ignored.

Medical care costs have risen dramatically in the last eight years, and my CPI-based income has been raised accordingly, yet my former employer continues to pay a large portion of my health insurance, and my costs are about the same.

I know that I am very fortunate to have your CPI income protection, as are 50 million other people who are similar beneficiaries. But don't you think, honestly, that it is unjust enrichment? Frankly, it scares me to contemplate what this transfer of payments from one group of citizens to another means.

For example: A local fellow who used to work for the same government bureau I did retired 1½ years ago. I called him last week about a job opening similar to the one I got after retirement. He is a CPA and figured that from the $24,000 salary to start, on top of his CPI-based federal annuity, federal, state, city, and FICA taxes, and commuting expenses would leave him only $9,000 for working, and he therefore was not interested. Why should he support the system?

I understand that BLS's *Monthly Labor Review* welcomes communications that are factual and analytical, not polemical in tone. Although this one is a bit embarrassing to me personally, it is a story that needs to be told, even if it ultimately results in less unjust enrichment to CPI cost-of-living benefit recipients.

Sincerely,

William D. Howard

(Ed.'s note: Two months later, Howard received a letter, which he calls "unsatisfactory," from Norwood defending the CPI policy.)

Selling with your back to the wall

TELEPHONE SELLING

Survival at your fingertips

By MURRAY ROMAN
Chairman, Campaign Communications
Institute of America

Inflation is transforming the way goods and services are marketed. The cold sales visit, for instance, is becoming an anachronism and the number of sales calls generally is down because transportation costs have gone through the roof. Just like suburbia, door-to-door selling was founded on the conditions of an earlier day which seem fast vanishing today.

Nevertheless, few managers need to give up effective personal selling, even though they have, in many cases, reduced their outside sales force. The solution is telephone marketing.

The Louisiana National Bank (L.N.B.) in Baton Rouge is among the recent converts to telephone marketing, having achieved notable success with the technique in marketing a telephone bill-paying service called the Bill System. Historically, such systems have not been among the banking field's most successful new services, but L.N.B. recognized the idea as a cost-effective means of attracting new customers. The problem, however, was how to market the Bill System.

L.N.B.'s marketing director, Jerry D. Turk, recognized that advertising had a tremendous task to accomplish because of the natural human resistance to change, especially where money is concerned. He could hardly expect customers to fall over themselves to pay bills by phone.

L.N.B. relied heavily upon TV and print advertising, and also conducted an intensive direct mail campaign. These promotional media were supplemented by telephone marketing.

The telephone proved the ideal medium for selling the Bill System, largely because it allowed for two-way communication without forcing the bank to resort to a costly door-to-door sales effort. The communicator script developed by Campaign Communications Institute of America and approved by L.N.B. contained answers to over 30 commonly asked questions. It was designed to encourage customers to express any fears they might have about the possibility of machine errors, fears which had torpedoed other phone bill paying systems.

In addition, C.C.I. recommended incorporating a taped message of L.N.B. chairman Charles W. McCoy, who, because of his title and role as a civic leader, provided an important degree of authority and credibility. In the tape, which was introduced by a live communicator, he positioned L.N.B. and explained the broad range of services offered by the bank, including the Bill System. Afterwards, the communicator returned to answer questions.

The calls were a service in every sense of the word because they stimulated an honest, informative dialogue between buyer and seller. And through this interaction, L.N.B. was able to dispel many concerns about the Bill System among consumers who otherwise recognized the service as a genuine convenience.

The results were far better than L.N.B. had expected. The cost per new account opened was less than for any other media tested, significantly outpolling what would have been achieved by direct mail alone. Indeed, direct mail helped open the door, but telephone follow-up increased the results by almost seven times.

In fact, the telephone was so successful that L.N.B. cross-sold three separate bank services during the same call. The results were even better than what was achieved with the Bill System alone. And included in the package were revenue- and deposit-producing services, which were and still are important to the bank in times of tight money. With this triple-clout approach, the cost per service sold was cut to an astonishing $10.

Afterwards, Turk decided to test customer reactions to the program through an independent survey. The results confirmed the bank's good judgment. According to the survey, the calls had reinforced the bank's consumer-oriented image, and were considered informative. In fact, over half the respondents cited the telephone as the catalyst for signing up for the package.

Unlike every other marketing medium, the

> **"How can we cure inflation? Discover oil. Meanwhile, we're increasing sales salaries and bonuses to meet or exceed competitors'."**
>
> —Joseph H. Neale
> Vice president & general manager Container Div., Union Camp

The author is recognized as a pioneer of telephone marketing. His company last year placed 15 million calls for a wide variety of clients, including Xerox, IBM, and Citibank.

price of a telephone campaign has actually declined. It is not uncommon for the costs of a consumer program to come to under $2 per telephone presentation. At 15 calls per hour, with a 10% order ratio, you can expect more than one sale per hour—less than $20 per sale. And it is also not uncommon that with higher call response rates these numbers will turn out to be significantly less.

The telephone works best hand-in-hand with direct mail to benefit the entire sales effort; it also multiplies by 2 to 5 times the response generated by direct mail alone. Telephone marketing also enhances door-to-door sales. Typically, corporations use the telephone to generate and pinpoint sales leads, thereby boosting the effectiveness of the overall sales effort.

In today's economic climate, with inflation firmly in the double digits and operating expenses exploding, business must make efficient use of their sales dollar. Telephone marketing does this by combining the flexibility of a sales visit with the accountability of direct mail—and, in the long run, for less expense than either.

> **If I were to be asked to identify one basic, underlying cause of our economic difficulties, I would point the finger at our 30-year fascination with the economics of demand stimulation. We have gradually become a nation of demand junkies.**
>
> —Sen. Lloyd Bentsen (D.-TX),
> chairman of the Joint Economic Committee, speaking at the spring meeting of the American Business Press

That explains why more marketers are incorporating it in their operations. One of the latest: IBM, which has just set up an "IBM Direct" division and an in-house telephone marketing facility.

Airwick refreshens inventory

In the early 1970s, management at the Professional Products Div. of Airwick Industries, Secaucus, NJ, decided to phase out its network of independent distributors and switch to a company sales force, mainly to gain more control over the selling process. But just as the conversion got under way, to the point at which 20% to 25% of sales were accounted for by 10 branch offices, executives decided to go back to using the distributors. Management had concluded that they simply knew local markets better.

For purposes of inventory, it was a propitious move: in the course of disbanding the division's branch offices, the company found that inventories were not as well managed as they were when the distributors were around. Also, as John Updegraph, president of the Professional Products Div., puts it, "Having the small entrepreneur handle the day-to-day operations relieves management of numerous headaches." Moreover, he notes that under the present system, inventory is carried by the distributors, not by Airwick itself.

Although management didn't specifically intend it, a program it set up in 1978 to help its 90 distributors manage inventory even better is also allowing them to cope with inflation-induced higher carrying costs for those inventories. The program, a series of pamphlets and booklets, gives the distributors pointers, beginning with how to keep track of inventory and measure whether inventory levels are too high or too low. Updegraph says, "We also help them with such things as time and territory management, hiring and training salespeople, and so forth."

Selling with your back to the wall

SALES COMPENSATION

Fighting inflation for every dollar

By JOHN A. FISCHER
Vice president, Sibson & Co.

Although the sales compensation plan is probably the most important way of communicating with a sales force in today's business environment, inflation is stripping many of these plans of their effectiveness. Sales executives are faced with problems of severe escalation in selling costs, a drop in employee morale and productivity, and in some cases, the loss of the star performers.

It is useful to take a look at how you manage your sales force and determine if any changes might help to alleviate some of inflation's pressures. Some basic questions which need to be addressed include:

1. Are existing pay levels adequate in view of current market conditions? One of the most pressing issues to be faced in periods of rapid inflation is to determine *how much* compensation should be increased to maintain fully competitive pay levels. The Consumer Price Index suggests that the annualized inflation rate is close to 20%. However, the rate of salaries and compensation for employees in the labor market is advancing 10–12% per year, whereas, pay advances for individuals who are not performing up to standard, or are still learning the job, would be less than this average.

2. Do commission and quota arrangements need to be adjusted? Periods of high inflation normally necessitate a reexamination of commission structures or quota-oriented bonus plans. Sales organizations that have a commission plan normally base the commission earnings on sales dollars. As prices escalate, pay levels also go up. It is often appropriate to examine this cause-and-effect relationship to determine if such a relationship should be maintained. Often, companies conclude that there is a need, to some degree, to disassociate price increases from the commission arrangement to preclude either over-paying or under-paying the sales force.

A similar problem develops where quotas have been established at the beginning of the year based on dollar volume where unanticipated price increases occur during the year. When this happens it is appropriate to consider some readjustment of the quota.

3. Is your sales compensation plan based on performance? At first glance this may seem to be a frivolous question. Yet, contrary to prevailing opinion, many studies reveal that differences in compensation levels for sales personnel are based on such factors as age, service with the company, structure of the territory—or nothing at all. There is little correlation between performance and the level of compensation.

For example, in the case of a commercial insurance company with a commission plan based on sales volume, sales managers who by the luck of the draw were assigned to territories where there were concentrations of commercial business earned large commissions. However, individuals assigned to relatively weak territories received relatively low commissions even if their market share in these territories was very high.

> “
> **The problem is that anyone who's asked to do anything about making sacrifices feels like a martyr because he sees that no one else is doing anything.**
>
> —Robert A. Nagel
> Central region sales manager
> Lily Div., Owens-Illinois
> ”

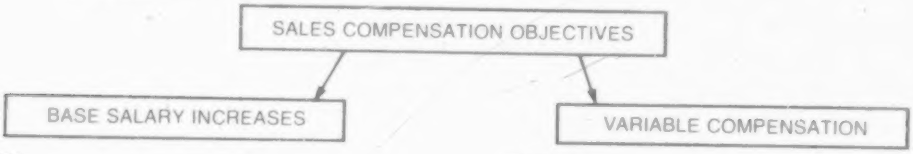
These kinds of inequities promote poor morale and do not encourage salespeople to attain higher levels of performance. First, of course, an organization must have a clear definition of what good performance is. If performance is specifically defined, the sales executive has to make sure that he has a compensation arrangement that clearly compliments an emphasis on performance.

4. Is your sales force top-heavy? Because of a relatively prosperous business environment during the past few years and the desire to create more pay advancement opportunities for the sales force, many organizations have an oversupply of supervisory and management personnel. Often these layers of supervision siphon off valuable dollars that could be used to reduce the overall cost of the sales force, or could be reallocated to provide better levels of compensation for the personnel holding viable jobs.

John A. Fischer is head consultant on sales force management at Sibson & Co., a Princeton, N.J. firm that specializes in employee compensation and human resources management.

Change the plan to fit the purpose

Depending on the objectives he wants to achieve, the sales executive must strike a balance between salary increases for his salespeople and a change in their variable compensation.



BASE SALARY INCREASES

Purpose

- Serve to reinforce the performance appraisal system which tells employees where they stand.
- Emphasize consistency and quality in employee performance of *total* job responsibilities.
- Payment for proven ability and performance.

Characteristics

- Permanent compensation once earned.
- Based primarily on *qualitative* assessment.
- Measures continuous, on-going tasks.
- Compensatory reward influenced by:
  - —Labor Market
  - —Salary range position
  - —Relationships to other employees
  - —Performance relative to job responsibilities

VARIABLE COMPENSATION

Purpose

- Maximize employee performance recognition by identifying measurable short-term objectives and rewarding employee if objectives are achieved.
- Emphasize the most important quantifiable activities which are part of job responsibilities.
- Motivate employee to maximum productivity on current tasks.

Characteristics

- Variable compensation amounts; must be re-earned each year.
- Based primarily on *quantitative* measures.
- Compensatory reward influenced primarily by:
  - —Group and/or individual performance:
    - —Sales
    - —Sales growth
    - —New accounts
    - —Most saleable products
  - —Competitive practice.

A top-heavy sales force may be a warning that there is something wrong with the career development path for sales personnel. Promotions into supervisory or management positions often are viewed as the only way to give good sales performers more money. Yet the unfortunate result is managers who sell on a part-time basis with marginal effectiveness and who also try to perform managerial functions that may only clog up the system. The alternative is to make sure that the organization has established a clear-cut hierarchy of more challenging nonmanagerial sales assignments so that individuals who are good at selling are given visible career advancement.

5. Would new selling approaches be feasible in your organization? With a high rate of inflation and a squeeze on selling costs, it is a good time to look at your overall sales force management strategies and determine if there are alternative selling methods that might work effectively. One such approach is the use of in-house distribution personnel to function in a selling mode. These individuals often team up with field sales personnel. They assist customers by telephone, increasing penetration and volume levels by promptly handling orders, complaints, and requests for information. The development of incentive compensation arrangements to reinforce such activities results in an environment in which the field salesperson has more time to focus on developing new business.

6. Are you getting maximum value from your existing sales compensation expenditures? Some sales executives find it useful to audit their existing compensation arrangement in terms of the objectives to be accomplished with the base salary portion of the compensation plan compared to the bonus or variable portion (see the accompanying chart). One organization in the chemical business found that it essentially was paying for the same performance in salary increases, an annual bonus arrangement, and in a monthly commission arrangement. Correction of this "triple dip" won't necessarily reduce any compensation costs, but it will help make the plan more effective in terms of directing the efforts and activities of individuals in the sales force.

To avoid continually changing the relationship between commissions or quotas and sales levels, companies sometimes develop a formula based on *deflated or real sales figures*, or they may simply put a ceiling on the commission or quota levels.

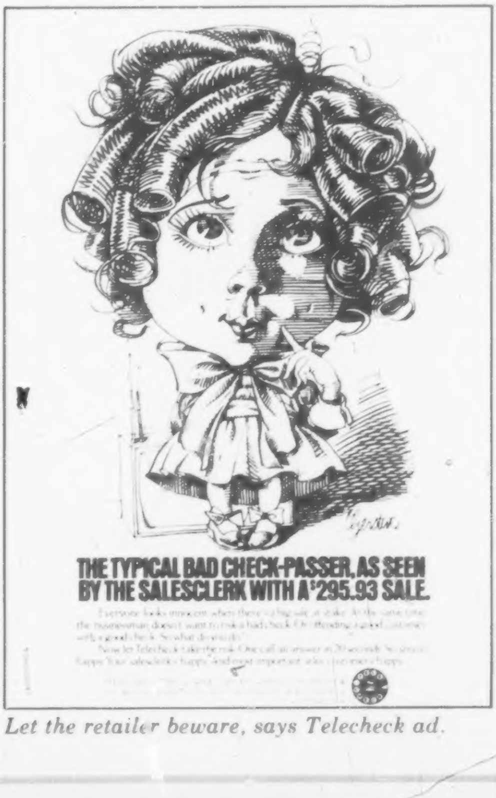
Obviously, there are no easy answers when you look at selling costs in an inflationary economy. Yet sales executives who are willing to grapple with questions such as those I have outlined will be on target in developing more productive and cost-effective selling organizations for today and tomorrow.

From plastic to paper

With charge cards becoming harder to get and, because of interest rates, more costly to use, consumers increasingly will be paying by check. Thus retailers who don't accept checks risk losing business; yet those who do, risk losing money: between 350,000 and 400,000 checks bounce in the U.S. each day.

One solution is to use a check-verification system. Telecheck Services, a nationwide franchise operation, is attracting customers for its plan, whereby a retailer calls a central number and gives the Telecheck operator his customer's name, identification (usually a driver's license, but possibly a credit card or, in some areas, a state I.D.), the check amount, and his own membership number. The operator checks the Telecheck computer, which lists known bad-check passers, and tells the retailer whether or not to accept the check. The operator also gives the retailer an approval number for each O.K.'d check.

If an approved check bounces (one reason: the writer is a first-time offender and isn't yet in the computer), Telecheck reimburses the retailer and then tries to collect on its own.



THE TYPICAL BAD CHECK-PASSER, AS SEEN BY THE SALESCLERK WITH A $295.93 SALE.

Let the retailer beware, says Telecheck ad.

Telecheck Southcoast's president, Derek Noske

Proof of the appeal of such services is the rapid growth of Jacksonville, FL-based Telecheck Southcoast, the only multistate (Florida, Georgia, and Alabama, with the Carolinas to be added soon) operation among Telecheck's 30-plus franchises. Established two years ago, Southcoast today has 5,000 subscribers, including the Eckerd and Pic 'n Save drug chains, A&P, Radio Shack, even corner stores, veterinarians, and hospital emergency rooms. Subscribers pay a minimum usage charge of $25 per month, which covers the clearance of a specified number of checks, plus from 2% to 4% of the value of checks beyond the base amount. The base amount, and the subscriber's rate of payment, are determined by the number and value of the checks verified for him by Telecheck. Southcoast's president, Derek Noske, predicts that by year-end he will have close to 9,000 subscribers and possibly 70 operators handling a total of 25,000–30,000 calls per day. He expects to approve checks worth $150 millon–$175 million this year.

Telecheck Southcoast sells its services mainly via direct mail to retailers, although it also uses some ads in industry magazines and in newspapers. When the coupon included with the direct mail piece is returned, it is assigned to one of the 40 salespeople (Telecheck calls them market managers). There are six zone managers whose responsibilities include seeing that leads are followed up within a week. "We've had up to a 15% return on our mailings," Noske says, "but the average is 5% to 6%. We close about 50% of the returns." Once a retailer is signed up, one of Southcoast's 18 "service" people conducts a one-hour presentation explaining the system to the retailer's salespeople.

Now that he's selling retailers on the security Telecheck offers, Noske hopes to sell consumers. Late this year he'll begin mass-media ads to let consumers know that they can conveniently pay by check at stores displaying the Telecheck decal.

with a given product." Added Phillips, "It's very important to understand that full development [of the opportunities] will take patience, perseverance, persistence, preparedness, and a cast iron stomach," the latter a reference to required toasts with Chinese liquor that some say make you "feel single and see double."

Other advice about entering and developing the PRC market was offered by Jane Sharp, marketing services manager, *American Industrial Report* magazine, Herbert Hayde, manager, Asia/Eastern European/Middle Eastern region, Burroughs, and Mark Mucher, China relations supervisor, Terex Div., General Motors. Among their tips:

- Investigate thoroughly any translation or consulting firms that claim to specialize in the China market
- Try to develop personal relationships with the Chinese
- Never cut prices
- Carefully research the market before you make your move.

MARKET RESEARCH

The rise of two-paycheck couples

The importance of the two-paycheck couple in the consumer economy is underscored in a new statistical series from the Bureau of Labor Statistics (BLS) that will provide quarterly reports on weekly earnings by family types. Previously, such information was available only on an annual basis.

In the first quarter of 1980, an S&MM analysis of the new series shows, families where both the husband and the wife held jobs accounted for 53% of the buying power of families with wage and salary workers even though dual units represented only 39% of such families. Since the first quarter of 1979, dual paycheck couples increased by 1.2% and their aggregate earnings rose 10.5% vs. a 0.3% increment of total families with earners and an 8.0% income boost.

Buying power by family type with wage earners

Family Type	Number (000)	Weekly Median Earnings 1980 1Q	1979 1Q–1980 1Q	% of Total Family Earnings 1980 1Q	% of Total Family Earnings 1979 1Q
Families with earners	40,510	$395	+ 8.3%	100.0%	100.0%
Married couples	33,278	428	8.1	88.8	89.6
One-earner	14,470	306	6.0	27.6	28.8
2+ earners	18,808	524	9.8	61.4	60.2
Husband & wife	16,059	529	10.5	53.0	51.2
Husband & other	2,247	531	7.3	7.4	8.0
Wife & other	396	329	1.2	0.8	0.8
Female-headed	5,658	220	11.5	7.8	7.2
One earner	4,024	183	11.0	4.6	4.2
2+ earners	1,635	368	16.0	3.8	3.3
Male-headed	1,573	350	4.4	3.4	3.3
One earner	945	283	9.4	1.7	1.6
2+ earners	628	495	9.8	1.9	1.6

Note: Details may not add to totals due to rounding.
Source: Bureau of Labor Statistics, *Earnings of Workers and Their Families: First Quarter 1980; USDL 80-352.*
© Sales & Marketing Management.

Weekly earnings of married-couple families rose 8.1% between the two first quarter periods while those of families maintained by women improved 11.5%, those of families maintained by men by 4.4%. However, weekly median earnings of female-headed families, at $220, seriously trailed those of married couple families, $428, and male-headed families, $350.

Obviously, as the recession unfolds, a key barometer that marketers should watch is the unemployment rate of husbands and wives. In 1980's opening quarter, 4.0% of husbands were jobless (up from 3.2% in the comparative 1979 period), as were 5.3% of the wives (no change from the 1979 period).

The new BLS data come from the Census Bureau's Current Population Survey, which queries 68,000 households monthly on a variety of topics. While the earnings data will be gathered monthly, BLS will report it on a quarterly basis, a spokesman says, "until we gain experience with seasonal adjustments and such."

SALES TRAINING

Be cool

Biofeedback—a process allowing a person to control such functions as blood flow, heart rate, and body temperature just as he controls the movement of an arm or leg—is now an accepted medical belief. At Adria/Waranteed Laboratories, a Columbus, OH, pharmaceutical company, it is also a tried-and-proven way to reduce the stresses connected with making a sales call, especially for new salespeople.

The idea came to Adria/Waranteed's sales training manager, Winston W. Hill, after he had read accounts of how biofeedback works and its benefits. With the help of two psychologists at Ohio State Univ., he has twice conducted biofeedback sessions. In the most recent one, last month, ten new salespeople were literally "wired" to electronic monitoring devices and taught how to reduce, through relaxation, heart and muscle tensions by heeding the machines' beeps that told when tensions were too high. "Our goal," Hill says, "wasn't to mask the realities of stress but simply to teach people to block out potentially destructive tension."

The salespeople later were asked to submit written evaluations of what they had been taught. Most, Hill says, believe that biofeedback helps them to better organize themselves before making a call and keeps them relaxed during it. For Hill, who will soon leave Adria/Waranteed to resume a career as a minister, another benefit was that "so many salespeople said that biofeedback gave them a new perspective on life in general."

SELLING AND THE LAW

Companies—they get no respect

In 1964, the U.S. Supreme Court decreed that public figures can't win libel suits against the news media unless they prove "reckless disregard" for the truth. But for years another question went begging:

S&MM BAROMETER

Waiting for the upturn

A consensus of leading econometricians polled by S&MM shows that the real gross national product (GNP, 1972$) will tumble 3.3% between the first and fourth quarters of 1980. Some 40 forecasters surveyed by Bob Eggert's *Blue Chip* newsletter see the GNP sliding 7.0% in the 2nd quarter, 4.4% in the 3rd quarter, and 1.2% in the 4th quarter (annual rates).

Chase Econometrics chairman Lawrence Chimerine looks for a mild downturn, reasoning that this recession's fast start has no correlation to "its ultimate magnitude." Agreeing, Mike Evans, head of Evans Economics, says that "the telescoping of time means that decisions which used to take months are now made in weeks."

A more serious recession is expected by Allan MacKinnon, Merrill Lynch Economics executive vice president, who insists "a lot of excesses have to be corrected." Meanwhile Argus Research chief economist Jeffrey Nichols fears that April's record 4.8% drop in the Commerce Dept.'s leading indicators series suggests that "the worst is yet to come."

Good news: There's almost universal agreement among those polled that a tax cut will go into effect around Jan. 1 (possibly even earlier) totaling $25–$30 billion, split 60% for consumers, 40% for business.

S&MM MARKETGRAPH

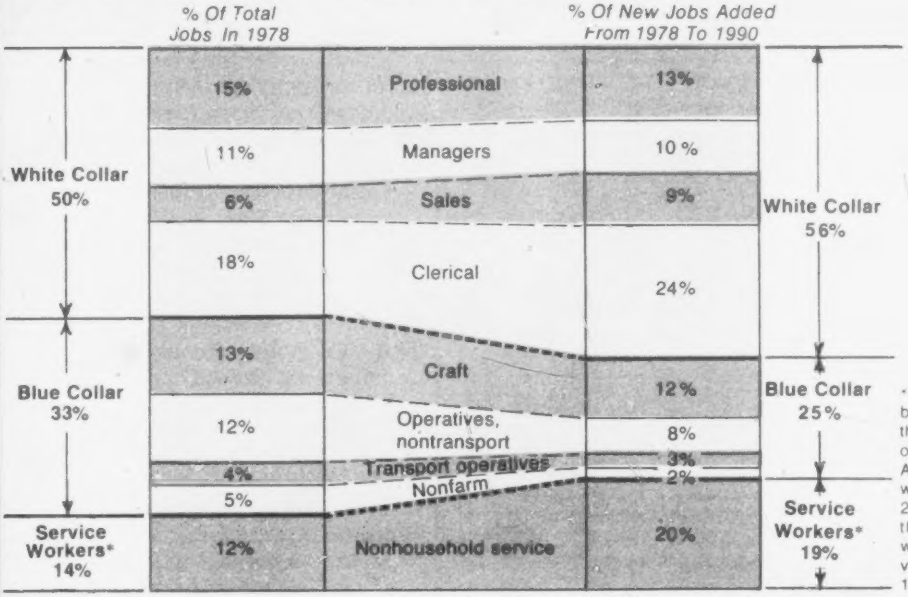
Tomorrow's work force: Brains over brawn

Although the total work force will grow more slowly in the 1980s, striking changes will occur in the job mix. Nonhousehold service workers will post the fastest growth rate, up 35% . The next-fastest-growing occupations will be clerical workers, up 28%, and sales workers, who will also increase 28%. What are some implications of these job-growth trends for marketers? All three of the fastest-growing occupations earn below-average income today, but will probably see their salaries rise at an above-average pace. However, three of today's best-paying job types—professionals, craft workers, and managers—will experience either average or sub-par job growth.

Occupational growth in the 1980s

Occupation	*% Change 1978–90*	*Employment 1978 (000)*	*Employment 1990 (000)*
TOTAL	**+20.8%**	**94,373**	**114,000**
White collar	**+23.6%**	**47,206**	**58,400**
Professional, technical	+18.3%	14,245	16,900
Managers, nonfarm	+20.8%	10,105	12,200
Sales	+27.7%	5,951	7,600
Clerical	+28.4%	16,904	21,700
Blue collar	**+16.1%**	**31,531**	**36,600**
Craft	+20.0%	12,386	14,900
Operatives, nontransport	+15.0%	10,875	12,500
Transport operatives	+16.2%	3,541	4,100
Nonfarm laborers	+8.1%	4,729	5,100
Service workers	**+29.9%**	**12,839**	**16,700**
Household	−23.2%	1,162	900
Other	+35.2%	11,677	15,800
Farm workers	**−15.9%**	**2,798**	**2,400**

More than half of new workers will wear a white collar



*Private household workers, not broken out here, represented 2% of the jobholders in 1978, and are part of the service workers' 14% share. Also, because private household workers are expected to decrease 23% in the 1980s, in comparison to the 20% gain by nonhousehold workers, they'll pull the overall service category share down to 19% in 1990.

AN S&MM SPECIAL SECTION

Co-op with class

As manufacturers pump more promotional dollars than ever into cooperative advertising, retailers are devising better ways to spend them. A prime factor in strengthening this alliance: efforts by some manufacturers to simplify their co-op plans and improve their materials.

Co-op
with
class

To manufacturers and retailers, cooperative advertising means big bucks but little bliss. An exclusive S&MM survey shows how they profit from all the hassle.

Marrying for money [what else?]

By MARTIN EVERETT
Managing Editor

So persistent is the movement toward cooperative advertising—and so diverse—that even those in the business sometimes lose track of how vast the medium is and the extent to which it is winning converts among top management. Its grass-roots nature makes co-op difficult to measure, of course, but there is no doubt that this dynamic hybrid of sales promotion and advertising is assuming a more important part in the plans of marketers.

Frank Hennessey, vice president of the Newspaper Advertising Bureau, estimates that manufacturers make available no less than $6 billion in co-op funds each year, up from $4 billion in 1978, and results of an exclusive S&MM survey bear him out. The survey, conducted by S&MM research director Elizabeth G. Diederichs, shows that 46% of the respondents are budgeting $500,000 or more for co-op this year. Even allowing for the impact of inflation, this marks a steady increase from 38% in 1979, 32% in 1978, and 26.8% in 1977.

Many marketers, formerly wedded to national advertising, recognize that with the computer it is now possible to monitor the effectiveness of co-op, which is basically a local promotion. Under the typical co-op program, the manufacturer and the retailer share the cost of advertising the product, with the store accruing co-op dollars from the manufacturer based on its purchases of the product. At the Consumer Products Div. of Deere & Co., for example, whenever any of its 3,300 dealers places an ad promoting such things as its garden tractors, chain saws, and snowmobiles the division pays 50% of the total cost. (Although some manufacturers limit the total dollars a dealer may spend, Deere does not.) Of Deere's total budget, it spends 65% in newspapers, 30% in radio, and 5% in TV.

S&MM's survey, based on responses from 134 readers with co-op programs, shows that the percentage of manufacturer co-op dollars actually used by retailers has held remarkably stable since the last survey taken in 1978. Seventy-one percent of the respondents said they spent 50% or more of their budgets last year. One reason that the figure isn't higher may be that some manufacturers really don't want to spend the entire amount. *The Sporting Goods Dealer* recently quoted a marketer as saying that his company had developed a co-op program "to pacify large accounts who put pressure on us for special prices. It's a form of discount. But we don't want everyone to use it, so our conditions are pretty tight."

Co-op money also has a way of getting lost in the recesses of large retail organizations. Ed Crimmins, a well-known authority on co-op and an S&MM contributing editor, recalls one retailer that had accrued over $6 million in co-op funds from various manufacturers yet spent only $900,000. It turned out that buyers at the store rarely told the ad manager about the co-op funds available from suppliers. Instead they

Co-op with class

preferred to convert the allowances into price reductions from manufactuters and add the money to the profit column of the buying department, making that operation look better than it deserved. "Part of the problem with co-op," says Crimmins, "is that it's largely in the hands of two people who traditionally haven't had much use for advertising: the manufacturer's salesperson and a buyer from the store."

Although most manufacturers profess to train their field

Copies of S&MM's Survey

While supplies last, readers may obtain a free copy of the complete 1980 Survey of Cooperative Advertising by writing, "Co-Op" on a business card and mailing it to:

CO-OP SURVEY —
c/o Elizabeth G. Diederichs
Research Director
Sales & Marketing Management
633 Third Ave.
New York, NY 10017

Topic A

Do you try to get retailers in an area to pool their co-op allowances?

	1979	*1977*
Yes	41.0%	35.3%
No	56.8	61.8
No answer	2.2	2.9
	100.0%	100.0%

If Yes, why?

"Low level of accruals often prohibits individual use."

"To afford larger, more dominant ads."

"Better exposure for the $."

"Useful in magazines which cover areas that include several dealers."

"Enables small retailers to use our TV spots with multiple taglines."

"Helps to establish identity of statewide organizations."

If No, why not?

"Dealers prefer exclusive ads to meet specific needs and objectives."

"We seem to sell only to *prima donnas*."

"We leave pooling to the wholesaler or field representative. It's too massive a job for the manufacturer."

"We want control of the program to benefit individual accounts."

"We try not to sell the same merchandise to clients in competitive markets."

"Group advertising is cluttered, confusing, and, because of our unit selling price requirement, probably illegal."

"Too much administrative hassle."

Topic B

Do you have a program to evaluate the effectiveness of your cooperative advertising program?

	1979	*1977*
Yes	41.0%	37.6%
No	57.5	60.1
No answer	1.5	2.3
	100.0%	100.0%

If Yes, please describe it briefly.

"Very crude."

"Compare sales in co-op vs. non-co-op markets during media-supported promotional activity."

"We survey dealers to whom the program is offered."

"We test market most campaigns and use such techniques as focus groups."

"Our program is tied into our computer system; summary reports are generated monthly, quarterly, and annually."

"The only feedback we get is from our salespeople. They generally know when an ad pulled."

force in the art of co-op, the survey indicates only slight progress in this area. About 73% of those responding have some sort of training program, compared to 69% in 1977. It's worth noting, however, that over 55% of the companies have special programs for the entire sales force, up from 45%.

Much of co-op education these days is done by the media, which feel that such consciousness raising ultimately leads to more ad dollars for them. In the forefront are such groups as the Newspaper Advertising Bureau, Television Bureau of Advertising, Radio Advertising Bureau (RAB), Newspaper Advertising Cooperative Network (NACON), and the Institute of Outdoor Advertising. Individual newspapers and stations also have their own promotional programs. Example: WNCN, a classical music station in New York City, makes it a point to air RAB commercials promoting the use of co-op, presumably because it has a high listenership among advertising and marketing people.

Their efforts seem to be having some effect because an increasing number of manufacturers are building cooperative advertising into their marketing programs. Of the companies responding to the survey, 71% said they used the medium to increase sales of their most profitable product or line, up from 66% a year earlier. There are still many instances where co-op's prime purpose is to meet the requests of retailers, wholesalers, and distributors, and, given the nature of the medium, this is always likely to be so.

However, the survey points up one area where the interests of a manufacturer and his cus-

tomers are likely to coincide: Fully 38% of those responding say they use co-op to build sales in a particular region. Such programs, often done via ads in regional magazines or informal groupings of newspapers, can be tailor-made to the needs of statewide distributors or the regional merchandising offices of major retailers.

In some cases, of course, manufacturers join forces with local media to pool the co-op funds built by small dealers so that ads can be bigger or run longer. There appears to be a slight increase in this practice, with 41% of the survey respondents indicating that they try to get retailers to pool their co-op allowances, up from 35.3% in 1977. Why do marketers go to the trouble to encourage group efforts of this sort? "It enables small retailers to use our TV spots with multiple taglines," says one respondent. From another: "It helps to establish the identity of our statewide organizations." On the negative side, one respondent noted, "We want control of the program to benefit individual accounts." Said another, "Our dealers prefer exclusive ads to meet specific needs and objectives." There was also this thundering comment: "Group advertising is cluttered, confusing, and, because of our unit selling requirement, probably illegal."

For some companies and their dealers, pooling provides a level of notoriety that might otherwise be impossible. For example, over 3,000 agents for New York Life Insurance get their pictures in newspapers, magazines, and on TV by pooling the co-op funds provided by the company. Not only do

WHAT SELLS IN THE NORTHWEST?

Fisher Broadcasting knows. For two years, we've been tracking retail buying and selling in the Northwest. Brand names. Share of market. Chief shoppers. Where purchased. Media habits. And more. For all the product categories shown below. And, because the Northwest's leading retailers help us select the categories measured, we know the most about what they want to sell too.

agents get an ego boost from seeing their faces in the pages of *Time, Newsweek, U.S. News & World Report*, and *Sports Illustrated*, but the home office puts together an unusual followup promotion for them. For a modest fee, it prints up a brochure in the likeness of *Newsweek* with the agent's picture on the cover.

The perpetual struggle for control of co-op is a prime issue between manufacturers and retailers as the medium develops into a sophisticated marketing tool. The survey shows that over half of manufacturers exercise strict control in selecting the type of media for a campaign and 34% keep close tabs on the creative content of the ads as well. About a third of respondents say they have increased control in these areas during the past two years. Some manufacturers are trying to keep a firmer hand on the timing of ads and the selection of specific publications or stations, but these clearly remain

Co-op with class

areas where the retailer calls the shots according to his own merchandising objectives.

With the computerization of much co-op data, both retailers and manufacturers are operating less in the dark than before. Manufacturers can monitor co-op accruals at hundreds of dealerships and keep track of how much each one has spent in specific media. Often this is done with the help of third-party auditing firms such as the Advertising Checking Bureau, Pinpoint Marketing, and Advertising Audit & Analysis. The latter, in Indianapolis, specializes in auditing co-op programs in the hardware and home-center business.

S&MM's survey also shows that retailers are capitalizing on co-op in many cases simply by taking it more seriously. Within the past year such chains as Gray Drug and Dart Drug have appointed co-op ad managers to plow through the piles of manufactuer co-op programs and figure out how to take advantage of them. Gray says it now can determine six weeks in advance how much co-op money will be available for an ad.

Dart is now able to pay more attention to merchandise that's backed by co-op money, with the result that this year such funds will cover 50% of its media costs in radio and TV and 35% in print. To make sure that it gets all the money it is entitled to, the company affixes to every purchase order a contract showing the co-op dollars accrued.

For their part, manufacturers are taking steps to eliminate the lapse in co-op programs that often occurs from one year to another. At NACON's business meeting in Clearwater, FL, earlier this year, Ralph D'Onofrio, general marketing manager for Pennzoil's Gumout Div., told how on the first of this year the company presented some 2,000 dealers with checks based on their previous year's co-op advertising. In this way, dealers could continue to promote Gumout's line of carburetor cleaners without waiting for co-op dollars to accrue. If a store's sales exceed this "Ad-vance," it is reimbursed with additional funds at the rate of 50¢ per case. Eastman Kodak also provided dealers with up-front funds for 1980 and, in addition, sends monthly reports to keep each store up to date on the status of its co-op allowance throughout the year.

One area where manufacturers have no choice but to get on better terms with retailers is the controversy over using co-

Co-op with class

op as a club to enforce "suggested" retail prices. The Justice Dept.'s newly appointed antitrust chief, Sanford M. Litvack, lists as one of his major concerns retail price maintenance, and he mentions the possibility of strong action against manufacturers that try to influence price levels by threatening to withhold a retailers' accrued co-op dollars.

The Federal Trade Commission reportedly is preparing a formal warning on the same subject. The agency has already signalled its concern in recent consent orders against Clinique Laboratories, a New York City cosmetics marketer, and Darvel, Inc., a jeans maker in Bellgarden, CA. Both, while admitting no violations, pledged to keep hands off retail pricing. Indeed, Darvel agreed to refrain for a year from suggesting resale prices at all. After that, any of its communications containing suggested retail prices must also state that, "you are free to determine your own prices."

Despite the increasing sophistication of co-op techniques, marketers still have a long way to go in measuring the effectiveness of the medium. Only 41% of those responding to S&MM's survey have an evaluation program. That's a slight increase from 38% in 1977 but still casual in view of the large number of dollars involved. Marketers who have evaluation programs were asked to evaluate them. Their replies ranged all the way from "very crude" to, "Our program is tied into our computer system; summary reports are generated monthly, quarterly, and annually."

Although evaluation of co-op hasn't caught on in a big way, something else seems to be working. For, among those that evaluate their programs, there is a marked improvement in how they feel about the results. Nearly 62% say they are "Fairly well satisfied," com-

pared to 39% in 1977. The proportion who checked "Needs improving" dropped to 36% from 54%.

Such trends reflect an increasing acceptance of cooperative advertising that is taking place on a number of fronts. Examples: Thanks to airline deregulation (S&MM, Dec. 10, 1979), Pan Am has taken the lead in putting together co-op programs for travel agents. In consumer electronics, Texas Instruments, a relative newcomer to co-op, has separate programs for its calculators, watches, and personal computers. With high-spending marketers of this sort in the picture, co-op clearly is going places. S&MM

A different kind of discount from a different kind of magazine.

Ladies' Home Journal's Bonus Page Discount

When we say Ladies' Home Journal is a different kind of magazine, we're referring to what's in it. And to what's in it for you.

In addition to all the other good reasons to advertise in the Journal, we're now offering a unique, new Bonus Page Discount. Here's how it works: When you buy three or more pages in a contract year, you earn our Volume Discount. If you decide to convert those earnings into space that contract year instead of taking it in cash, we'll give you 25% more on the discount you've earned, in space, as a bonus. For instance:

EXAMPLE:

12 Page Advertiser

Open Page Rate
$44,600

M.I.D.* Discount
10%

$4,460
(Discounted Dollars per page)

$40,140
(Net Page Rate)

Total Discounted Dollars Earned
(12 x $4,460) = $53,520

Our Bonus (+25%) on Discounted Dollars Earned
($53,520 X 1.25) $66,900
equals 1.66 four color pages

*Multiple Impression Discount

Of course, we still have our Loyalty Discount, which is progressive as space purchased grows, and a Seasonal Discount for those who advertise in January, July and/or August. Ask your Journal Representative for details.

It's the Bonus Page Discount we wanted to explain, because we believe there's nothing like it in publishing in this country today. Where do you find it? Only in Ladies' Home Journal.

Ladies' Home Journal.

Once again, it's a different kind of magazine.

LHJ Publishing Inc. A Member of the Charter Media Publishing Group

Data in this *Survey of Buying Power* are organized into four sections. The black index tabs along the right-hand edge of the book provide easy access to each section.

Section A

A new look brightens this Survey's usefulness

Change, the eternal verity of the marketplace, has as much meaning for Sales & Marketing Management's annual *Survey of Buying Power* as it does for the marketer who relies on the *Survey* to keep abreast of the changes that impact his planning, decision-making, and evaluating. Just as the markets that serve as the focal points of sales strategies are in a constant state of flux, so do the marketers' own informational needs shift from time to time. Recognizing this never-ending pattern, the *Survey* always seeks new ways to tailor its relevant, timely, and actionable data to the decision-making and problem-solving needs of its users.

Along that line, Section A in the *1980 Survey* has been redesigned to answer the marketers' greater need for market information in two distinct categories. The first part is devoted to national-level demographic and socioeconomic markets that must be considered in the formulation of short- and long-term goals. The second part pivots around geographic markets—counties, metros, states, and regions—which influence the selection of selling tactics that will convert those goals into bottom-line results as well as match specific products or services to particular markets.

The first part of Section A, culling information from outside sources, brings an added dimension to the *Survey*'s basic data by pinpointing markets that may be appropriate sales targets for particular products or services. The tables and charts summarize the salient characteristics of such markets, their size, and, where possible, potential for future growth. Among the markets so discussed are: (1) age segments, (2) income classes, (3) household types, and (4) ethnic groups.

Section A's second part, focussing on the geographical factors that are integral elements of sales strategies, zeroes in on the *Survey*'s three basic dynamics—population (who will buy), Effective Buying Income (what they have to spend), and retail store sales (where they buy). Included are *GeoMarket Highlights*, which rank metropolitan markets and states for such factors as population gains or losses, household income, retail store sales, and local and regional trends.

Together, the two segments of Section A heighten the usefulness of the statistics that appear in Sections B and C. By bringing additional insights to bear, Section A gives the marketer the opportunity to employ the statistics with greater finesse, expand their applications into more areas, and augment the payoff that ensues when the distance between information and action is successfully bridged.

THE EDITORS

The U.S. market: 1979

	Totals 1979	% Change 1977–79	Annual % Change 1970–79
Population	221,582,400	+ 1.7%	+ 1.0%
Households	78,253,200	+ 4.0	+ 2.6
			1971–79[1]
Effective Buying Income ($000)	$1,618,642,884	+24.2	+10.3

Markets that marketers pursue are a changin'

The proliferation of demographic segments gives marketers a bewildering array of sales targets. But failure can come quickly unless planning keeps the marketer one step ahead of important trends, such as a changing age-mix, fragmented households, population movement, and the "new woman."

By THAYER C. TAYLOR
Editorial Director
Survey of Buying Power

"Sometime in the 1970s, the longest period of continuity in economic history came to an end," says Peter Drucker, "and we moved into turbulence." Marketers, however, have been caught up in turbulence for the past 30 years as the postwar baby boom created challenge after challenge. Mass markets were created for playpens, tricycles, and books on "how to raise baby" in the 1950s; hot rods and hi-fi sets in the 1960s; and, in the 1970s, big-ticket durables and leisure-time products. At the same time, new life-styles surfaced, creating entirely new consumer needs and desires.

The postwar generation, as it created mass markets, helped by the new electronic media and a vastly expanded, affluent middle class, was not a homogenous, monolithic market but, instead, a mosaic of individual segments, each with its own distinctive demographic traits. As a result, market planning and strategy became precision-oriented so that marketers could reach specific demographic markets—such as age groups, household types, or income classes.

Monitoring demographic markets is an essential first step in market planning if a company's products and services are to be geared to those markets. Also, because demographic markets grow at widely disparate rates, the marketer wants to be positioned to exploit the fast-steppers and avoid the laggards. The number of demographic markets that a marketer can set his sights on can be limitless, depending upon how fine he wants to dissect the national population. Here are today's key demographic markets that a marketer should focus his planning on:

- **Changing age mix**, with middle-agers moving to center stage, ending an era of youth-oriented marketing.
- **Population mobility**, with nonmetro areas outpacing metro markets for the first time, the Sunbelt becoming the new focal point of population growth, and the suburbs' "whites only" image beginning to change.
- **Fragmentation of household types**, reflecting new social values and interpersonal relationships.
- **Working women**, considered by many to be the most "transforming phenomenon" to hit the marketplace in this century.

Two premier postwar trends—first a record number of births through the late 1950s, peaking at 4.3 million in 1959; second, the subsequent downslide in fertility rates (live births per 1,000 women aged 18–44) to record lows—skewed the population's age-mix. In the 1970s, the number of children under 14 tumbled

14% while 25–34 year olds exploded by 39%. As a result, the median age of the population rose more than two full years, to 30.2, an ironic epilogue to the once often heard "Don't trust anyone over 30."

This makes the 1980s a spectrum of sales opportunities for marketers because the middle-aged group, 35–54, will be the fastest growing demographic market (see the S&MM Special Report, *The Marketer's Complete Guide to the 1980s*, Dec. 10, 1979). Reasons: most Americans reach the peak of their earning capabilities during this age span, and many 35–54 year olds are part of a new demographic phenomenon: the two-paycheck couple. Considering that middle-aged households spend about one-third more than the typical family, marketers who sell to them should enjoy faster rising sales in this decade even though the overall economy is generally expected to grow at a slower pace than in the last decade.

Another age market to watch is senior citizens, 65 and older, whose numbers grew 24% in the last decade and will increase another 20% in the current one. While many flee to sunny climes and a life of leisure, that may change. As George Brown, secretary of the Conference Board notes, the speed with which Congress passed legislation last year prohibiting mandatory retirement at 65 "signals the start of a new trend, creating new sources of economic growth and new markets for products and services."

The knottiest demographic issue in the 1980s is whether another—but smaller—baby boom will develop. Many point to the large number of women born between 1947 and 1959; they argue that as these potential mothers move into their prime child-bearing years an "echo" effect of the earlier baby boom will happen. Indeed, the Census Bureau expects births to average 3,945,000 each year of this decade, about 20% high-

Two ways of looking at household buying power

Record employment helped lift median Effective Buying Income per household a robust 10.4% in 1979, the best year-to-year improvement since 1974. However, the gain was an illusory one. When inflated dollars are washed out of the EBI figure, the real gain—in terms of 1972 $—was a wispy 1.4%. That was slightly better than the previous year's increase, but, nevertheless, below the long-term trend.

In calculating "real" EBI, Sales & Marketing Management eschews using the Consumer Price Index that most economists generally rely on to get a fix on deflated income levels; instead, S&MM uses the current and 1972 dollar estimates the Bureau of Economic Analysis develops for per capita disposable income as part of its National Income and Product Accounts system. Here, S&MM divides the current dollar figure by the 1972 dollar equivalent to arrive at an income deflator. In turn, the EBI estimate is divided by the deflator to generate a 1972 dollar equivalent.

er than in the 1970s.

However, today's adult woman has different motivations compared to her mother; thus, it's questionable if past behavioral trends can be a weathervane for future patterns. Richard F. Hokenson, vice president at Donaldson, Lufkin & Jenrette, believes that an increasing number of women will remain unmarried and that the proportion of wives in the labor force will rise sharply (from just under 50% in 1979 to nearly 58% by 1990). As a result, he says, "we see the legitimate fertility rate declining in the 1980s." Two Rand Corp. researchers, William Butz and Michael P. Ward, agree: "As the dollar value placed on a working woman's time increases, having a child becomes more costly in terms of her foregone wages. Many couples are reacting to this economic fact of life by having smaller families"—or remaining childless.

Whether or not a baby boom materializes has strong implications for marketers. Management Horizons, a highly respected consulting firm, notes that outlays during the first three years of a first-born child's life top $2,200. Adds Hokenson: "With fewer children, the growth in discretionary income will be even greater. Demand for goods and services that children use will be replaced by demand for adult services—recreation, travel, eating out, and so on."

Shifting preferences on where people want to live will continue to confront marketers. Some observers think the cost of gasoline and the inflationary economy generally will sharply curb population mobility in the future. Considering that Americans-on-the-move has been a dominant social leitmotif as far back as the days of Daniel Boone, it's likely that consumers will make the

When you care enough to send the very best.

Mom and Pop just bought a used car.

Back when our readers were raising the kids and paying off the mortgage, Detroit eagerly went after their money. The family car was a basic necessity.

Now that Mom and Pop have passed 50, automakers don't focus much attention on them.

A serious mistake, per the special Simmons reader study on Modern Maturity released in December, 1979. It shows that 86.6% own cars—and that a remarkable 24.5% have second cars. Including classics, RVs and even OTRs.

Most important, 67.2% bought new cars during the previous year vs. only 48.4% of readers of other magazines studied by Simmons.

Our 18.5 million Moms and Pops are excellent prospects for automobiles. Also tires, insurance, batteries, lodging, car-care products, repair services. Also soup, soap and sportswear.

Because Americans 50 and over have *$355 billion* to spend. And the Maturity Magazines Group will give you *the* dominant depth and penetration in this vital market at remarkable cost efficiency. E.g.: your CPM for a 4/c page in Modern Maturity is only $2.91.

Herb Haas or Jim Sutherland will show you how one or more of our publications will mesh with your objective. Call (212) 599-1880. Or write: Maturity Magazines Group, 420 Lexington Avenue, New York, NY 10017.

necessary economic adjustments to maintain their cherished mobility.

The 1970s saw some surprising twists in long-standing mobility trends. Nonmetro areas grew faster than metro areas—1.18% a year vs. 0.73%. However, in terms of the actual numbers of people involved, metro gains dwarfed nonmetro increases, 9.4 million vs. 5.4 million. Still, the nonmetro phenomenon proved that there was a strong desire to move from bigger communities to smaller ones. Metros with more than three million people hardly grew at all, and those from 500,000 to 3,000,000 increased less than 1% a year. In contrast, metros with less than 250,000 and those from 250,000 to 500,000 enjoyed annual increments of 1.37% and 1.26% respectively, which significantly eclipsed the nonmetro growth rate.

The suburbs continued to be the fastest-growing geographical unit, with an annual 1.5% growth rate. However, this was a noticeable slowdown from their 1960s' pace.

Striking changes altered the suburbs' racial composition in the 1970s. Blacks increased 4.1% a year (vs. 1.0% in the central cities), Latinos by 4.4% (vs. 2.9% in the core cities). In striking contrast, whites gained only 1.2% a year (vs. a 1.0% decline the the central cities).

Despite their rapid growth, minorities still comprise a small portion of the suburban population: 5.8% for blacks, 4.8% for Latinos. The critical element here is that a beachhead has been established by upwardly mobile minorities and more of them will join the mainstream dream of a home in the suburbs in the years ahead.

Caution on retail sales comparisons

Like any private research firm, Market Statistics, the Bill Communications subsidiary that prepares the *Survey* statistics, relies upon federal government censuses for benchmark data in developing its own estimates. In preparation for the *1980 Survey*, Market Statistics revised its own basic data and growth rates for individual store types and local geographic areas in line with the results of the 1977 Census of Retail Trade. Consequently, the retail sales estimates in the *1980 Survey* are not directly comparable with those in the *1979 Survey*, which had been based upon the 1972 Census of Retail Trade. As any marketer knows, the further one moves from a census year, the less reliable a benchmark becomes. Also arguing against such comparisons, although to a much lesser degree, is that, previously, sales taxes and finance charges were included in *Survey* estimates. The *1980 Survey* excludes such factors in line with the Census Bureau's new policy, adopted at the time of the 1977 Census.

Marketers who want to compare the growth rates of individual markets can use the 1977 Census results as their base point, just as the *Survey* has done for several of its *Highlight* tables. Also, the *1980 Survey of Buying Power Data Service* will include 1977 totals for 12 store categories and all counties.

Meanwhile, job mobility enhanced the suburbs importance to marketers in the 1970s. The Bureau of Labor Statistics' annual report, *Employment and Unemployment: 1979*, reports that 41.5% of employed workers now live in suburbs compared to 27.6% in central cities and 30.9% outside metro areas. Those who are predicting that the energy crisis will force in-

S&MM MARKETGRAPH

Sunbelt: Setting the pace in industrial growth, too

Post-war population trends that triggered rapid growth in the Sunbelt states are having an economic spin-off. The southern perimeter of states that stretches from North Carolina to California is chalking up better-than-average growth rates in various industrial sectors. The 1977 Economic Censuses, for example, reveal that Sunbelt growth eclipsed the rest of the country in three key indicators: value added in manufacturing, 81% vs. 59%; retail sales, 66% vs. 54%; and selected services, 82% vs. 64%. However, not all the Sunbelt states are equally blessed, as can be seen from the wide variation in growth rates—from 61% to 122% in value added, and 41% to 109% in selected services.

Southern Living
MAGAZINE OF THE MODERN SOUTH / BOX 523 / BIRMINGHAM, ALABAMA 35201 / PHONE (205) 870-4440

July 14, 1980

Dear Marketing Executive:

Forty-two years ago this month President Roosevelt pronounced the South "...the nation's number one economic problem." In 1938, as the country was slowly struggling upward from the Depression, the South brought up the rear, statistically.

It's a different story today. Very different.

During this period of economic downturn, it is the South which is least affected by current conditions. And at the head of the statistical parade, leading all U.S. regions in retail sales volume: the South.

But a curious thing happened on the way to the top. National magazine circulation in this region didn't keep pace with the South's economic progress. The result, today, is disproportionate coverage--more circulation where the growth has been slowest, less where it has been greatest: in the Sunbelt.

What has been your organization's response to the remarkable growth of the South? Has your marketing thrust been re-calibrated accordingly? Are southern region sales managers backed up with the advertising support their sales volume warrants? Major marketers recognize the South's tremendous sales potential, but they are keenly aware of the shortfall in national magazine penetration. SOUTHERN LIVING, as part of the basic buy, helps offset the imbalance.

With SOUTHERN LIVING, you'll assure southern region sales personnel of advertising support reflective of their sales volume. Additionally, your southern customers--distributors, buyers, dealers--will know you care about them by advertising to their best customers: SOUTHERN LIVING readers.

Like the South, SOUTHERN LIVING has experienced tremendous growth--with our circulation guarantee up from 200,000 in 1966 to the current 1,750,000. Advertising pages, too, have multiplied--from 268 fourteen years ago to over 1600 last year.

If you would like to examine a copy of our magazine and learn more about its 7½ million readers, drop me a note on your letterhead. We at SOUTHERN LIVING would like to help your organization gain/maintain #1 share in America's #1 regional market.

Sincerely,

James E. DeVira

James E. De Vira
Vice President and
Director of Advertising

dustry to relocate in the core cities miss the obvious: where the bulk of today's workers live. If rising energy costs render commuting uneconomic, it makes more sense to accelerate the industry trend to the suburbs.

The 1970s saw a dramatic recontouring of the marketing map. A phenomenal two-thirds of the decade's 16.8 million increase in resident population occured in the Sunbelt. However, the Sunbelt's growth was highly imbalanced: just three states—Florida, Texas, and California—accounted for 42% of the U.S. gain.

The 1980s are expected to bring population shifts from the Sunbelt to the Rocky Mountain states. The energy-related industries of that region, Donald McLagan, senior vice president, and Christopher Caton, director of long-term studies, Data Resources, Inc., agree, will be a major source of new jobs, income, and population growth. They say that the development of the small industrial base will contribute new jobs with the highest gains in technology firms.

The cause of the turbulent demographics that have buffeted marketers since the 1960s is the emergence of new social values. These values, as senior vice president Jane Fitzgibbon, of Yankelovich, Skelly & White, told a recent American Assn. of Advertising Agencies meeting, "pivot around self-fulfillment and psychic rewards, as opposed to the accumulation of material possessions; focus-on-self as opposed to conformity and self-denial." These values, which started with women's groups and college students in the early 1960s, she says, "are now subscribed to by over 80% of the population."

Some of the striking changes

Although all private market and economic research firms rely upon federal government reports as benchmarks for making their own estimates, they often find the same government agency issuing two different sets of figures on the same subject. A case in point is the Census Bureau's "1977 Census of Retail Trade" and its "1977 County Business Patterns (CBP)" series. Although both reports rely on the same 1972 Standard Industrial Classification codes in assigning retail establishments, they show a difference of 40,244 stores. The most glaring discrepancy is in the restaurant field, where there is a spread of 21,232 establishments.

The inability of the Bureau to develop a consistent set of store totals should be a source of concern to marketers. Because the census is done every five years, marketers use the annual CBP's store count to update their estimates of retail store sales in local markets.

IS YOUR SALES FORCE WORKING IN THE DARK?

MARCIULIANO

Dun's Marketing Services can help you discover a rich new vein of sales prospects.

We're the country's most comprehensive source of business market information.

We can help you pinpoint your highest potential markets. And provide you and your sales force with a steady stream of high-quality leads. Our account executives can also show you how to initiate new sales strategies, and follow through on proven productive marketing systems.

Systems that generate measurable results. Ask to see our case histories, please.

If you're ready for a bright new approach to your company's bottom line, call toll free **(800) 526-0665**; New Jersey **(800) 452-9772.**

[1] Combination of general merchandise, apparel & accessories, and furniture/home furnishings/appliances; widely used as an indicator of consumer discretionary spending.
N.A. Not available.
Note: Real retail sales estimates, derived by S&MM, are based upon the retail sales deflators developed by the Bureau of Economic Analysis (BEA) as part of its responsibility for building the National Income and Product Account system. The deflators are superior to the Consumer Price Index (CPI) for deflating retail store sales because they are based upon the merchandise mix of individual store types; also, one-third of the CPI is made up of services, which have no relation to retail stores. S&MM gratefully acknowledges BEA's cooperation in making the deflators available.

omen doing their own
g was an outstanding de-
raphic trend of the 1970s
will cast a long shadow
the 1980s. Increasing
bers detoured from the tra-
nal trek to the altar and
rmed into the job market
ead. The percentage of
24-year-old women remain-
single jumped from 28.4%
960 to 49.4% in 1979, from
% to 19.6% among the
29 year olds. Those who did
ry, shedded their mates
er; the number of divorced
nen per 1,000 married per-
rocketed from 42 in 1960
to 111 in 1979 (the ratio also leaped for males, from 28 to 72).

More than half of all adult women were in the labor force last year, compared to 38% in 1960, and, to the surprise of many, the trend was strongest among married women with children under six years of age, from 19% to 43%. Some of the factors at work here, as noted in a Bureau of Labor Statistics report: Lowering of the birth rate, increase in age at first marriage, desire to maintain or increase household standard of living, and growing social acceptance. The trend is likely to continue in the current decade but with a different emphasis, an Ogilvy & Mather study notes. Women at work will be "less a matter of feminism, more one of inflation, high energy prices, and rising taxes."

An important demographic market to watch in the new decade will be the educated woman. For the first time in the postwar period, women outnumber men on college campuses—5.9 million vs. 5.5 million. Furthermore, they're entering college at a rate five times faster than men are. The implications for marketers are yet to be only guessed at. ■

Selling success starts with good geography

Just as "nothing happens until somebody sells something," no marketing plan will succeed until the marketer picks the right local markets for his selling emphasis. *Survey* data on metro areas, counties, and states point the marketer to where "sales opportunities" gleam the brightest.

By THAYER C. TAYLOR
Editorial Director
Survey of Buying Power

Once his overall sales objectives are decided upon, the marketer concerns himself with developing strategies for reaching those goals. This involves following up the vital demographics that are an important element in the creation of overall objectives with a parallel geographic segmentation that will underlie his local market selling tactics. Here, the marketer will select those geographic markets where the impact of his selling force and advertising support will produce the most profitable results.

Selecting appropriate markets is a critical decision because of the unique factors that differentiate one market from another. The more informed the marketer is about the distinctive qualities of local markets, the more knowledgeable will be his decisions on positioning his sales force and advertising strengths against markets that promise to deliver the greater return-on-investment.

The *Survey*'s rich lode of data on local market characteristics provides the marketer with helpful insights into the formulation of geographical sales strategy. The three basic dynamics of a local market—population (customers/prospects), Effective Buying Income (their

SEARCHING FOR A NEW INCENTIVE DESTINATION?

LOOK BEYOND THE TULIPS.

If tulips don't make you think about Holland, the incentive country, then think about this. Holland is as action packed and as accommodating as an incentive traveler could want. Here's a sample.

Your people can gorge themselves at a Medieval banquet. Arrive in grand style, by horse-drawn carriage. Be announced by trumpeteers.

Experience a traditional Frisian village where a favorite pastime is pole vaulting across canals. (The adventurous can give it a try.)

Mingle with the fun-loving Dutch at your own intimate party complete with traditional costumes, food and drink.

Enjoy a cheese and wine party on a candlelit barge amid Amsterdam's night glow.

Experience our famous museums and performing arts with the money-saving Holland Culture Card.™

Holland is a country of first rate hotels, terrific restaurants, casinos, seaside resorts, picture-perfect cities, unique countryside—everything that makes for a perfect incentive.

Look beyond the tulips. Clip the coupon for an incentive/hotel kit and planning questionnaire or call the Netherlands National Tourist office (212) 245-5323, and ask for the Meetings, Conventions, Incentives Department.

S&MM GeoMarket

buying power), and retail sales (what they spend)—are presented in considerable detail, enabling the marketer to tailor his marketing program to geographic dimensions. For example, *Survey* data for each market include four population age segments, four household income groups, and six retail store types. These breakdowns allow the marketer to impart a high level of precision to his sales strategies.

Probably the most widely-used *Survey* figure is the Buying Power Index (BPI), which combines the market's population, Effective Buying Income (EBI), and retail sales into a handy measurement of U.S. potential. Chicago's BPI of 3.5542 means that the market's share of the U.S. potential sales of a mass-produced consumer good is equivalent to that figure. (The aggregate BPI total for all states will be 100.0000.)

"The BPI," comments Roy B. Unger, group vice president and marketing chief at Sealy, Inc., Chicago, "tells you where the sales opportunities are, provides an effective geographic standard, and shows you where improvements can be made."

Because it represents a share of U.S. potential, the BPI is a popular device for, first, estimating the distribution of a company's sales among its individual territories, and, second, setting quotas based upon each territory's estimated sales potential. Of course, relatively few companies have the personnel and financial resources for covering the entire U.S. One of the BPI's most popular appeals is that it can be adjusted to reflect the size of the marketer's universe, regardless of how small or large it may be.

William Tempest, sales vice president, Oral Systems, Inc., sells toothbrushes and toothpaste through the Southeast

*Potential metro market as defined by Sales & Marketing Management. Note: Median Household Effective Buying Income divides the market's households into two equal parts, with as many units above the figure as below it. 1977 is used as the base period for calculating % Gain because that is the year in which the most recent business census, Census of Retail Trade, was conducted. The Index is computed by dividing the all-U.S. % Gain, 19.4%, into the market's comparable figure.

American Management Associations' Premier Course...

THE AMA MANAGEMENT COURSE

It's no wonder so many of today's greatest sales and marketing success stories are about graduates of THE AMA MANAGEMENT COURSE. For 27 years, we've consistently offered the best training to build a career on... hands-on management know-how that starts paying off the day you get back to the office.

This is what you'll accomplish...

- You'll broaden your perspectives and understanding in every key area of the management process.
- You'll develop the skills that are crucial to growth and success... planning, organization, control, decision-making, and leadership.
- You'll fine-tune your understanding of organizational dynamics and effective leadership.
- You'll explore the decision-making process... expanding your capacity for making qualitative judgments... and building your knowledge of modern methods of analysis.
- You'll relate your individual responsibilities and goals to the over-all objectives of your organization.
- You'll grow through "active learning" instruction in the management of time, money and people.

This is how you'll do it...

- Your team will set up and operate its own competitive company through four business quarters... rotating roles in different line and staff positions... at varying levels of responsibility.
- You'll experience a blend of hands-on learning techniques—role-playing, in-basket exercises and advanced computer simulations that let you see the immediate results of your management decisions.
- You'll receive personal coaching and counseling every step of the way from seasoned management veterans.
- You'll share the insights of expert guest speakers who cover the entire spectrum of management responsibility.
- You'll assess your own personal management style while working side-by-side with managers from hundreds of leading industries.

You'll attend four intensive one-week Units spread out over the course of a year.

Unit 1: Management Dynamics
You'll focus on the philosophies, skills and tools that contribute to effective human resources management, planning, setting standards of performance, organization, decision-making, and problem-solving.

Unit 2: Analytical Tools of Management
You'll explore the critical skills and tools involved with the planning process and with financial management. Participants will break up into small teams charged with responsibility for managing companies via computer simulation.

Unit 3: Human Resources Management
You'll examine in-depth the most challenging aspect of management... dealing with people. You'll concentrate on successfully dealing with peers, as well as communication, negotiation and motivation of subordinates.

Unit 4: Leadership Laboratory
You'll look at yourself as creator of a successful working environment. You'll strengthen your own leadership abilities and master techniques that turn conflict into "win/win" situations.

Because THE MANAGEMENT COURSE is designed for working executives, you'll enjoy an extraordinary flexibility in scheduling the time and location you attend.

The Management Course is offered in the following cities: New York, Atlanta, Washington, DC, Dallas, Chicago, Los Angeles and San Francisco.

If you are committed to fulfilling your career potential...and, if you have a minimum of three years on the firing-line...fill out and return this coupon today to:

and Southwest. To get a handle on where consumer buying is concentrated, he first lists the states he sells in and their relative BPIs. Then he adds up the BPIs and arrives at a total of 30.1630. Because this figure represents his total marketing universe, so to speak, it is equivalent to 100.0000. Dividing this figure into each state's BPI gives him an adjusted BPI that will suggest the share of company sales volume that each state should produce. Thus Alabama should contribute 4.8881% of his total sales rather than the 1.4744% credited to it in the *Survey*.

State	Survey BPI	Adjusted BPI
AL	1.4744	4.8881
AR	.8594	2.8492
FL	4.1940	13.9045
GA	2.1121	7.0023
KY	1.4537	4.8195
LA	1.6483	5.4646
MS	.8799	2.9172
NC	2.2869	7.5818
SC	1.1573	3.8368
TN	1.7961	5.9546
VA	2.3079	7.6514
WV	.7620	2.5263
AZ	1.1118	3.6860
NM	.5149	1.7071
OK	1.2549	4.1604
TX	6.3494	21.0503

Now that he has a firmer grasp of what each state should produce, Tempest next evaluates their actual performance. He enters the most recent quarterly sales totals for each state and calculates its relative share of his total business. To determine how effectively each state delivered on its sales potential, he divides its share of company sales by the BPI, which gives him a quality index. Arkansas, for example, fell 7% short of its indicated potential. He learns that only six states did better than was expected of them. (See table, page A-27.)

When use of the BPI turns up results like this, it acts as a catalyst for futher analysis. Here, Tempest will look into

How states compare in median EBI per household

Rank	State	Median Effective Buying Income Per Household	% Growth 1977–79
1.	Alaska	$26,107	+18.4
2.	Hawaii	22,991	+26.8
3.	New Jersey	21,771	+17.9
4.	Illinois	21,054	+16.4
5.	Connecticut	20,815	+17.8

46.	Tennessee	14,833	+16.8
47.	Montana	14,813	+17.4
48.	Oklahoma	14,634	+22.5
49.	Alabama	14,267	+16.8
50.	Arkansas	13,150	+17.7
51.	Mississippi	12,776	+15.7

Note: Median EBI per household means there are as many households above the stated income figure a below it. It is a more reliable indicator of buying power than average EBI per household because the latte includes income from nonhousehold sources, such as institutions and military barracks, hence will alway be a higher figure than the median one. The year 1977 was chosen for computing % growth because tha is the year in which the most recent Census of Retail Trade was taken.

TX	19.8622	94

This kind of analysis also tells Tempest the volume of additional sales he can expect if the deficient territories had delivered their potential. For example, if Alabama's share-of-sales had matched its share-of-BPI, the state's actual $390,000 of business would have increased to $426,000. All told, bringing the 10 lagging states up to par would have lifted total quarterly sales volume from $8,701,000 to $9,061,000.

Assigning quotas, or sales goals, to independent distributors is always a touchy chore. While they are usually paid commissions based on what

The format of this overview of regional markets is changed from the one in previous "Surveys." Because the "Survey" benchmarks were revised to reflect findings from the 1977 Census of Retail Trade, 1977 was chosen as the base year for computing changes in population, Effective Buying Income, and retail sales. Thus, the reader can get a better idea of how the three critical components of market dynamics are changing in relation to one another.

"LET ME HELP WIN YOUR WAR ON WASTED TIME!"

The new REDUCING WASTED TIME program is aimed at reducing distracting behavior in the workplace. First, there's a humorous film titled "Why didn't somebody tell me?" with Hans Conried, who is absolutely outrageous as he confronts employees whose habits waste company time. This is followed up with a 20-page booklet (one version for employees, another for supervisors) which expands on points made in the film and includes a confidential questionnaire employees can use to identify problems in their own workplace. There is also a special Program Director's Guide that shows you how to use the program most effectively.

Audiovisual portion of program is available for license or rent in 16mm color sound film or ¾ inch videocassette format.

Special Preview Offer. Send me REDUCING WASTED TIME with "*Why Didn't Someone Tell Me?*" in the 16mm film format for a 24-hour preview for only $30, plus shipping. I understand that I may apply the preview charge to license or rental within 30 days.

they sell, which makes them attractive from a cost point of view, the marketer wants to make sure the distributors are realizing the potential that exists in their areas. Carol Denis, sales manager of Handy Aid Co., a maker of small appliances, knows from prior research that she can expect to gain $220 in product sales for every $1 million of total retail sales in a market. Using the *Survey*'s retail sales totals for the six New England states, she estimates she should derive approximately $10,142 in product sales in that region. She arrives at this estimate by multiplying each state's total retail sales by $220.

Because she is assigning sales targets on a factual basis—using ratios generated by market research and applying them to the most current statistics available, as provided by the *Survey*—she is in a stronger position to sell the distribu-

Retail sales: A scramble for first place

43.	California	106	95
42.	Connecticut	108	96
	U.S.	**112%**	**100**

Note: Growth Index is calculated by dividing the U.S.'s 112% growth into the state's % growth. 1971 is the base period because that is the year new income data from the 1970 Census were included in *Survey of Buying Power* EBI estimates.

State	Retail Sales	Product Volume
CT	$11.4M	$2,508
ME	4.2	924
MA	21.8	4,796
NH	3.8	836
RI	3.1	682
VT	1.8	396

tors on their allocated goals. Also, as the selling season proceeds, she can use each state's expected share of sales as a measurement tool for evaluating the performance of individual distributors.

Allocating advertising dollars for his automotive tune-up kit is a prime concern of Luigi Naples, marketing manager of Cox Supplies Co. He sells in 10 Southern metro markets which are roughly similar in size, from Macon, GA, with a population of 248,400, to Lubbock, TX, 205,200. If he allocated the ad dollars on a population basis, the division among the 10 markets would be pretty even, from 11.1% for Macon down to 9.2% for Lubbock.

However, because the *Survey* data allow him to plan on a more sophisticated level, he decides to evaluate the markets from two vantage points: household spending and automotive sales. He divides the retail sales per household for each market by the all-U.S. average, $11,342, and gets indexes ranging from 140 for Lubbock, TX, which means 40% above average, down to 90 for Killeen-Temple, TX, or 10% below average.

Because of his product's close kinship with motor vehicle ownership, he totals the automotive dealer sales for the 10 markets and computes each market's relative share of the overall total. Again, Lubbock scores high, with a 14.8% share, while Fayetteville, NC, comes in low with an 8.1% share. Combining the two factors he has developed, Naples then multiplies the household index by the automotive percent share, and totals the resulting figures. He then computes each market's share of the total. This gives him a significantly different allocation picture from the one suggested by population, but one that is more closely linked to his marketing objectives.

As marketers scan S&MM's metro markets for the brightest sales opportunities, comparative market quality is always a critical consideration. Meal-Time Services, a vendor of cooking ingredients, is concerned about the decline in real sales suffered by restaurants

Market	Population Share	Advertising Share
Macon, GA	11.1%	9.9%
McAllen-Pharr-Edinburg, TX	10.9	10.4
Fayetteville, NC	10.6	7.4
Columbus, GA	10.1	9.4
Daytona Beach, FL	10.0	9.6
Savannah, GA	9.8	8.3
Roanoke, VA	9.7	10.5

Galveston-Texas City, TX	9.2	8.6
Lubbock, TX	9.2	18.9

SUCCESSFUL SALES begin with SUCCESSFUL SALESPEOPLE

Organizing and Managing Your Sales Force: Tested Methods that Get Results (783)

Muster your sales force with clear priorities and concrete sales strategies that will produce results. It's easy to slip into the activity trap; this intensive seminar will give you tested methods to identify and recruit "self starters," forecast your problems and opportunities, develop compensation plans to achieve company objectives.

Key Topics
- Selecting, organizing, motivating and monitoring your sales force
- Setting performance standards and sales objectives
- Career path planning for the salesman
- Effectively making and implementing decisions

Who Should Attend:
Small Business Entrepreneurs · Sales Vice Presidents · National Sales Managers · Field Sales Managers · Sales Administrators · Assistant Sales Managers · Regional and District Sales Managers · Marketing Managers with responsibility for sales · Prospective Sales Managers

Now you can improve your performance and increase your income. Take the first step towards success with this unique opportunity, designed to offer a solution to the individual training needs of today's sales people.

Using our totally realistic and practical approach will give you the skills to successfully deal with buyer resistance, competition, finding and selling new accounts, organizing and managing your sales force, and much more.

Here's your chance to learn not only concepts but also how to relate those concepts to your own individual situation. Each of the seminars listed below will focus on specific aspects of the on-the-job selling situation which will help you gain more confidence and a higher degree of success.

How to Develop Extraordinary Selling Skills (777)

Top salespeople sell with their heads rather than their feet. Intelligence and human sensitivity have always been the signs of a true professional. Learn to identify your best prospects and present your product as a solution to their problems. Appeal to your customer's MIND. Learn to anticipate his objections and meet them.

Key Topics
- Planning your sales call
- Preparing your presentation
- Making the sales call
- Overcoming objectives
- Understanding why you did ... or did not ... get the order
- Developing more new business from existing accounts

Who Should Attend:
Experienced professionals as well as those with a minimum of six months sales experience.

as a result of the recession and climbing gasoline prices. John Kearns, Midwestern regional sales manager, thinks the growing number of supermarket delicatessen sections may help lagging sales.

Interested in learning whether markets differ significantly in the way consumers spend their food dollar, he picks nine markets that cluster together as far as median EBI per household is concerned. He lists for each market its food store sales and eating and drinking places sales, then totals the two figures. Computing the share represented by food stores, he learns that the markets, indeed, show distinctive traits—from 76% in Hamilton-Middletown, OH, down to 60% in Madison,WI.

Market	Food Spending ($000)	Food Store Share
Decatur, IL	$174	72%
Wichita, KS	525	65
Indianapolis, IN	1,397	70
Hamilton-Middletown, OH	318	76
Dayton, OH	1,011	71
Elkhart, IN	177	70
Madison, WI	427	60
Marion, IN	87	75
Fargo-Moorhead, ND	189	61

As the preceeding diverse examples illustrate, the *Survey*'s informational resources will serve the marketer much the way Francis Bacon wrote about books: "Some books are to be tasted, others to be swallowed, and some few to be chewed and digested." The *Survey*'s data provide a broad menu of decision-making aids, which, when seasoned with the marketer's personal knowledge, can be combined in innovative recipes that blend successful selling strategies and profitable payoffs. S&MM

If the *Survey of Buying Power* is important to your work, you owe it to yourself to see and evaluate the new 1980 *Survey of Buying Power* DATA SERVICE. For more information, see the brochure in this magazine.

In Louisville we know how to compete

The Courier-Journal
The Louisville Times

has the track record to prove it . . .

1st in the U.S. for household penetration of Sunday papers and 2nd in the U.S. for household penetration of combined daily papers having circulations of 200,000 and more.

Next to the Ocean, we're the main attraction

Next to our famous white beaches and blue Atlantic Ocean, we're the main attraction on the Ocean in a modern resort town located just a couple of hours from Washington, Baltimore and Philadelphia.

Our 21-story hotel includes 5 oceanview executive suites and 12 meeting suites, all with total convention conveniences. You'll find 3 major meeting rooms plus multiple break-out suites. Our hotel on the Ocean will accommodate groups from 7 to 700.

When you're not meeting, you can explore our spectacular enclosed Plaza. You'll find a heated swimming pool, game room, health club, saunas, whirlpool, skating rink and 3 lighted tennis courts. There's nearby sailing, boating and golf.

Try dining with an ocean view, dancing in the disco or sipping a drink in one of our two bars.

Call us toll free or mail the coupon and we'll invite you to see the main attraction in Ocean City, Maryland. In Md. 800-492-1874. DC, DE, PA, VA, NJ, WV: 800-638-4580.

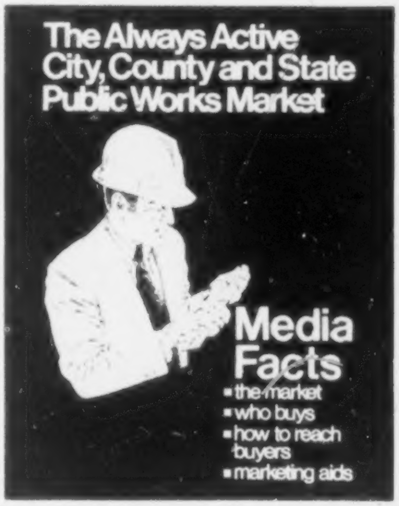
free
marketing and
sales guide



The mandate from the American people for a cleaner environment and a better standard of living has created a city, county, and state public works market that is big, steady and continually growing.

Annual expenditures are in the billions.

Purchases include equipment, material and supplies for the design, construction, operation and maintenance of:

- *streets and highways*
- *water works*
- *wastewater*
- *solid waste*
- *recreation*

Free guide explains the market, shows how to reach and influence buyers/specifiers, and outline aids that help make sales.

Sample tables from the Survey

The numbers that appear beneath the individual column heads in the sample tables shown here are coded to the "Definition of Terms," which starts below. The definitions appear alphabetically in the Definition section, and each one is accompanied by the appropriate number that appears beneath the column headings on this page. Thus the definition for "Age Groups of Population" contains a reference to Columns 4-7. Using the code numbers in conjunction with the appropriate definition will make the individual column topics more intelligible to you and thus enhance your ability to profit from the *Survey* data.

Definition of terms used in the Survey

The following definitions pertain to both U.S. and Canadian data. However, the Standard Industrial Classification (SIC) industry codes shown for retail store groups are those used in the U.S. Column numbers refer to the sample tables illustrated on this and facing page. When you use the Canadian statistics, substitute "Canada" for "U.S." in the definitions. Also, to facilitate usage of the two *Surveys* we publish each year, we indicate whether the data appear in the *Survey of Buying Power* (SBP) and/or *Survey of Buying Power—Part II* (SBP—II).

AGE GROUPS OF POPULATION (Columns 4-7). Population breakdowns for four age groups are useful for marketers because age groups are associated with lifestyle changes. Thus 18 to 24 year olds represent the household-forming stage. **SBP**

APPAREL & ACCESSORIES STORES (Column 33) (SIC Major Group 56). Establishments engaged primarily in selling new clothing and related articles. It is a broadly inclusive group, embracing—besides men's and women's clothing stores—custom tailors, tailor shops, corset and lingerie stores, furriers, millinery stores, hosiery shops, women's specialty stores, and shoe stores. However, apparel and accessories sales made in department and general merchandise stores are not included. **SBP, SBP—II**

AUTOMOTIVE DEALERS (Columns 14, 35) (SIC Major Group 55, except Subgroup 554). Included are retail outlets selling cars—domestic and imported, new and used. Motorcycle dealers, household trailer dealers, boat dealers, and "other" automotive dealers (such as tire, battery, and accessory dealers and auto and home supply stores) round out the group. **SBP, SBP—II**

AVERAGE HOUSEHOLD EFFECTIVE BUYING INCOME (Column 45, U.S. State Summary on EBI, B-5). Total Effective Buying Income (EBI) divided by the number of households. Often used as an indicator of market quality, but it can be misleading, particularly in areas where there is a disproportionate share of college, military, and other types of institutional population housed in group quarters not considered households. Because total EBI includes such income, a per household average credits households with income not properly theirs. (See also Median Household EBI). **SBP, SBP—II**

BLACK POPULATION. Updated from the Census Bureau's 1970 Census of Population and Housing, it is a head-count estimate of persons who consider themselves members of the Negro or black race and who lived in the area at the end of the year. **SBP—II**

BUILDING MATERIALS, HARDWARE DEALERS (Metro Ranking Table, B-37)(SIC Major Group 52). This mixed group includes retail establishments whose main business is selling lumber, building materials, paint, glass, wallpaper, and basic hardware to the general public even if sales to contractors account for a larger share of total sales. Retail nurseries, lawn-and-garden supply stores, and mobile home dealers are in this group. **SBP**

BUYING POWER INDEX (BPI) (Columns 22, 40). A weighted index that converts three basic elements—population, Effective Buying Income, and retail sales—into a measurement of a market's ability to buy, and expresses it as a percentage of the U.S./Canada potential. It is calculated by giving a weight of 5 to the market's percent of U.S./Canada Effective Buying Income, 3 to its percent of retail sales, and 2 to its percent of population. The total of those weighted percents is then divided by 10 to arrive at the BPI.

The BPI, probably one of the *Survey of Buying Power*'s most widely used single market measures, is most useful in estimating the potential for mass products sold at popular prices. The further a product is removed from the mass market, the greater is the need for a BPI modified by more discriminating factors—income, age, sex, etc. **SBP, SBP—II**

CANADIAN METROPOLITAN AREA (CMA). Statistics Canada, Ottawa—the federal government's data-collection agency—defines metropolitan areas by labor markets, using the boundaries of minor civil divisions (below the county level). Each CMA comprises a continuous built-up area (the "urbanized core") together with adjoining areas with high levels of commuting to or from that core. Sales & Marketing Management defines metropolitan areas for Canada by counties because current data, especially sales data, are usually available on a county basis. (See County.) The U.S. used a system similar to Canada's prior to the 1950 census, when it switched over to county boundaries. **SBP, SBP—II**

CENTRAL CITY. A city whose name is included in the name of a metropolitan area. The title of a Standard Metropolitan Statistical Area (SMSA), or a potential metropolitan area as defined by Sales & Marketing Management, includes the name of the largest city and the names of no more than two other area cities with populations that meet certain criteria of absolute and relative size. There are two exceptions: (1) the Nassau-Suffolk SMSA, which has no central cities, and (2) the Northeast Pennsylvania SMSA, whose central cities are the same as those of the two former SMSAs from which it was formed. The title of a New England County Metropolitan Area contains the names of all the SMSA central cities in the area. **SBP**

CITY. An aggregation of people and retail outlets with corporate limits within which city government, as an incorporated state agency, can legally exercise authority. This year's *Survey* lists 662 U.S. cities that either (1) had 40,000 or more population in the 1970 census, (2) are central cities of metropolitan areas, or (3) function independently of counties. Kannapolis, NC, is the only nonincorporated central city. It is considered to lie within the limits delineated for Census Bureau purposes. (See Central City and Independent City.) **SBP**

CONSOLIDATED METROPOLITAN AREA. A large metropolitan complex comprising a metropolitan area of a million people or more together with other contiguous metropolitan areas, the population of each of which is at least 75% urban and meets certain minimum criteria of integration with the central metropolitan area. Under new federal criteria to be implemented with 1980 Census data, it's likely that several more consolidated areas will be named. **SBP, SBP—II**

COUNTY. The primary political administrative subdivision of a state, the county is widely used in marketing because: (1) Current available data below the state level is greatest at the county level. (2) Geographic boundaries are rarely altered. (3) Complete national coverage is achieved by adding all counties. (4) The U.S.'s 3,141 county units are manageable building blocks for alignment of sales territories. (5) County boundaries are readily indentifiable.

For Louisiana, parishes are used in lieu of counties; for Alaska, census divisions. The District of Columbia is treated as a single county unit. In Virginia, all cities are by law independent of counties; hence, the *Survey* treats them as county units. The cities of Baltimore, MD, St. Louis, MO, and Carson City, NV, are also independent cities. In addition, the county formerly known as Muscogee County, GA, is administered by the consolidated city-county government of Columbus; hence, that county is listed as Columbus. In the 1980 Survey, Jackson and Washabaugh counties, SD, are merged, retaining the Jackson name, in line with a state decision. **SBP, SBP—II**

DEPARTMENT STORES (SIC Subgroup 531). Establishments that employ 25 or more persons and have combined sales of soft goods and apparel representing at least 20% of total sales. Furthermore, the establishment must sell minimum amounts of (1) furniture, home furnishings, appliances, radios, and TV sets; (2) a general line of apparel; and (3) household linens and dry goods. So-called mass merchandisers and discount stores are included if they meet the above criteria. Department store sales are included in the General Merchandise Store sales totals. **SBP—II**

DRUGSTORES (Columns 15, 38) (SIC Subgroup 591). Includes both drugstores and proprietary stores. Drugstores fill and sell prescriptions; proprietary stores do not. Both sell drugs, proprietary medicines, and other health and first-aid products. Both may sell a number of related lines—cosmetics, toiletries, candy, tobacco products, magazines, toys, etc.—and may operate a soda fountain or lunch counter. **SBP, SBP—II**

EATING & DRINKING PLACES (Columns 11, 31) (SIC Major Group 58). Includes establishments selling prepared food and drinks for consumption on or near the premises or for takeout, as well as lunch counters and refreshments stands selling prepared foods and drinks for immediate consumption. Also included are caterers and in-plant food contractors, as well as leased eating and/or drinking concessions in theatres, hotels, amusement parks, etc. **SBP, SBP—II**

EFFECTIVE BUYING INCOME (EBI) (Columns 16, 42). A classification exclusively developed by Sales & Marketing Management, it is personal income less personal tax and nontax payments. Personal income is the aggregate of wages and salaries, other labor income (such as employer contributions to private pension funds), proprietors' income, rental income (which includes imputed rental income of owner-occupants of nonfarm dwellings), dividends paid by corporations, personal interest income from all sources, and transfer payments (such as pensions and welfare assistance). Deducted from this total are personal taxes (federal, state, and local), nontax payments (such as fines, fees, penalties), and personal contributions for social insurance. The resultant figure is commonly known as "disposable personal income." Market Statistics, the research division of Bill Communications that prepares the *Survey* data, removes from this figure compensation paid to military and diplomatic personnel stationed overseas to arrive at Effective Buying Income.

Effective Buying Income is a bulk measurement of market potential. It indicates the general ability to buy and is essential in comparing, selecting, and grouping markets on that basis. But for products that appeal to specific income classes, the percent of households by Effective Buying Income group should be considered. **SBP, SBP—II**

EFFECTIVE BUYING INCOME, AVERAGE HOUSEHOLD. (See Average Household Effective Buying Income.)

EFFECTIVE BUYING INCOME, HOUSEHOLD GROUP. (See Households By Effective Buying Income Group.)

EFFECTIVE BUYING INCOME, MEDIAN HOUSEHOLD. (See Median Household Effective Buying Income.)

EFFECTIVE BUYING INCOME, PER CAPITA. (See Per Capita Effective Buying Income.)

FOOD STORES (Columns 10, 30) (SIC Major Group 54). Establishments selling food primarily for home consumption. **SBP, SBP—II**

FURNITURE, HOME FURNISHINGS & APPLIANCE STORES (Columns 13, 34) (SIC Major Group 57). A combination of several subgroups that sell goods for furnishing the home, including furniture, floor coverings, draperies, glass and chinaware, stoves, refrigerators, and other household appliances. **SBP, SBP—II**

GASOLINE SERVICE STATIONS (Column 36) (SIC Subgroup 554). Includes both "gas stations" and garages whose receipts come mostly from sales of gasoline and oil. Besides those main products they also sell tires, batteries, and accessories. **SBP**

GENERAL MERCHANDISE STORES (Columns 12, 32) (SIC Major Group 53). Includes department stores, limited-price variety stores ("5 & 10's"), and general merchandise stores. Establishments selling used general merchandise and those selling by mail, vending machine, or direct selling are classified by the Census Bureau as "miscellaneous retail stores" (SIC 59). **SBP, SBP—II**

HARDWARE STORES (Column 37) (SIC Subgroup 525). Primarily sell basic hardware lines such as tools, builders' hardware, paint and glass, housewares and household appliances, cutlery, and roofing materials, no one of which accounts for more than 50% of total sales. *Note:* Usually included as part of Building Materials Group in U.S., Hardware Dealers are listed separately in Canadian Section because Statistics Canada treats them as wholesalers. **SBP**

HOUSEHOLD (Columns 8, 26). A household consists of all the people occupying a single housing unit under 1970 census rules—such as a house, an apartment, a group of rooms, or a single room. The members of a household need not be related, and a single person living alone in a housing unit is also counted as a household.

All persons who are not members of households are regarded as living in group quarters: institutions, college dormitories, military barracks, etc. Caution: Although a county's population total will include all the people in the area, the household total will not do so because it excludes group quarters. **SBP, SBP—II**

HOUSEHOLD HEAD. The person so regarded by members of the household. Because, under census rules, each household must have a head, the number of household heads is always the same as the number of households. Two types of household head are recognized by the Census Bureau. A family head is a household head living with one or more persons who are related to him or her by blood or marriage. A primary individual is a household head living alone or with nonrelatives only.

HOUSEHOLDS BY EFFECTIVE BUYING INCOME GROUP (Columns 18-21, 46-50). A household's available spending potential is also used by marketers who want to aim their efforts at those most likely to buy. **SBP**

INDEPENDENT CITY. Several cities in the U.S. that do not fall within official county boundaries are treated as independent entities by the Census Bureau. The *Survey* lists those independent cities as county entities. Except for St. Louis, MO; Baltimore, MD; and Carson City, NV, which replaced Ormsby County, all independent cities are in the state of Virginia. These are Alexandria, Bedford, Bristol, Buena Vista, Charlottesville, Chesapeake, Clifton Forge, Colonial Heights, Covington, Danville, Emporia, Fairfax, Falls Church, Franklin, Fredericksburg, Galax, Hampton, Harrisonburg, Hopewell, Lexington, Lynchburg, Manassas, Manassas Park, Martinsville, Newport News, Norfolk, Norton, Petersburg, Poquoson, Portsmouth, Radford, Richmond, Roanoke, Salem, South Boston, Staunton, Suffolk, Virginia Beach, Waynesboro, Williamsburg, and Winchester. **SBP, SBP—II**

MEDIAN AGE (Column 3). A calculation that divides the age distribution of the population into two equal groups, with one-half of the population younger, and one-half older, than the median figure. **SBP**

MEDIAN HOUSEHOLD EFFECTIVE BUYING INCOME (Column 17). This figure divides the income distribution into two equal parts, with one-half the households above it, the other half below it. It is a more reliable indicator of an area's relative income level than is Average Household Effective Buying Income because it is less likely to be skewed by statistical oddities. (See Average Household Effective Buying Income). **SBP**

MERCHANDISE LINE SALES. These data show total sales of nine broad product categories, such as groceries and other food products, toiletries, footwear, and so on. Because merchandise line sales data were not available from the 1977 Census of Retail Trade, the 1980 *Survey* estimates are updated from the 1972 Census. If the Census Bureau releases its data on time, updates from the 1977 Census will be included in *Survey-II*. Merchandise line totals are becoming increasingly popular because they give a more realistic estimate of a product's area potential than is provided by store-type sales. **SBP—II**

METROPOLITAN AREA (See Standard Metropolitan Statistical Area.)

METROPOLITAN AREA CODE (Column 23). This is a numbering system to identify constituent metro counties in the *Survey*'s Canadian tables. Starting with the numeral 1 and following the alphabetic sequence of metropolitan areas, it assigns an identifying number to each metropolitan area and its member counties. **SBP, SBP—II**

NEW ENGLAND COUNTY METROPOLITAN AREA (NECMA). The U.S. Office of Federal Statistical Policy and Standards (OFSPS) defines these areas (intentionally not designated as "standard" metro areas) by applying to the New England counties the same criteria used in establishing Standard Metropolitan Statistical Areas (SMSAs) outside New England. **SBP, SBP—II**

Here are just some of the users and uses for the information found in the new DATA SERVICE

1 MARKETING/PRODUCT MANAGEMENT

define market potential
evaluate sales performance
determine distribution pattern
examine weaknesses & strengths in relation to existing market
develop index of product demand
determine product potentials
select markets, strategy, & ad support for new products
create buying power indexes for special products

2 SALES MANAGEMENT

map sales territories
set quotas
set objectives for branches, dealers, distributors, wholesalers & retailers
analyze sales variations
route sales force—rate its efficiency
compare potentials/travel time
spot performance weaknesses
modernize sales organization

3 ADVERTISING/MEDIA

set budgets—allocate advertising dollars—spot media decisions
city, country, metro areas
analyze TV markets (ADI's)
compare media coverage/market size
select test markets
apply advertising pressure where needed
check ad results against potential sales

4 MARKET ANALYSIS

check year-to-year changes
spot high income concentrations
relate household incomes to price tags
trace population shifts—review market changes
choose market by demographics
forecast regional and national totals
differentiate markets by retail sales price
select quality markets

The brand new completely updated and expanded 1980 **Survey of Buying Power DATA SERVICE** will be released in three sections

NEWSPAPER MARKET. To qualify, a city must have at least one daily newspaper with a minimum paid circulation of 25,000. If two or more qualifying cities are in the same county, they are combined into a multiple-newspaper market. For a newspaper city to be part of a multiple-newspaper market name, it must be at least one-third as large as the largest city in the market, or part of the metropolitan name. Each county in a newspaper market is one in which the combined qualified newspapers penetrate more than 20% of the households. **SBP—II**

PER CAPITA EFFECTIVE BUYING INCOME (Column 44; U.S. State Summary on Effective Buying Income, B-5). This is an arithmetic average obtained by dividing Total Effective Buying Income by Total Population. It measures an area's spending power by eliminating the impact of population size. However, because population is measured as of Dec. 31, whereas EBI is measured as a flow over the calendar year, a significant change in population during the year can distort the per capita figure. **SBP**

PERCENT OF U.S./CANADA (Columns 2, 25, 29, 43). A market's share of the total U.S./Canada population, Effective Buying Income, or retail sales, it shows the relative importance of the geographic area's demographic or socioeconomic factors. **SBP**

POPULATION (Columns 1, 24). Updated from the Census Bureau's 1970 Census of Population and Housing, and Statistics Canada's 1976 Census of Population and Housing, it is a headcount estimate of all the people living in an area at the end of the year. It includes people living in group quarters such as colleges and hospitals, and armed forces permanently assigned to the area, but excludes tourists and transients. **SBP, SBP—II**

POPULATION, AGE GROUPS OF. (See Age Groups of Population.)

POPULATION, BLACK. (See Black Population.)

POPULATION, MEDIAN AGE OF. (See Median Age.)

POTENTIAL METROPOLITAN AREA (indicated by an open triangle next to the name of the market). An area not officially designated as a Standard Metropolitan Statistical Area by the U.S. Office of Federal Statistical Policy and Standards (OFSPS), but that Market Statistics estimates comes closest to satisfying the qualifying criteria. Of the 300 metropolitan areas listed in the 1979 *Survey*, 29 are Sales & Marketing Management potential metropolitan areas. In the past, 80% of S&MM's potential areas have eventually received official status.

The OFSPS is revising its metropolitan area criteria. The new provisions can be expected to make most of S&MM's potential metros into official areas, together with a good many others. An equitable re-evaluation of potential metro areas will become feasible when preliminary 1980 Census data become available. **SBP, SBP—II**

QUALITY INDEX (QI) (Column 41; U.S. State Summary on Retail Sales, B-7). If a market's percent of the national population, which can be taken to represent par, is divided into the Buying Power Index, it yields the Quality Index. A high index could reflect either above-average resident buying power or a strong influx of shoppers from outside the area, or both. **SBP, SBP—II**

RETAIL SALES (Columns 9, 28). All net sales (minus refunds and allowances for returns) for establishments engaged primarily in retail trade. Receipts from repairs and other services are also included, but retail sales by such nonretailers as wholesalers and service establishments are not counted. Although retail sales are often used to gauge the purchasing power of the residents in a market, they may be affected by the movement of shoppers to and from adjacent areas.
